Absolutely correct. Any user should be able to fix Lotus Notes so
that it won't continue to try to use invalid segment selectors. Fixing
MS-Word so that it stops performing those array over-runs is a piece of
cake too.

Now where did I put that copy of the MS-Office source code? :-)

I would wait till the Fall 97'. Icom Dealers will get what the market
will bare. Remeber the Icom 756 started at $2300 and now is $1930 at
two Dealers and Under $2000 at all the rest. I feel the IC-706 MK II
will drop from $1350 to $1200 by September 1997. Or drop $100 and give
you a free separation Kit. I suggest calling all the toll free Dealers
to shop around for the best price.

5557. VHF Contest TODAY!!

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-14 00:00:00 UTC
From: jw@alpha1.csd.uwm.edu
Message-ID: <5nu52d$667@uwm.edu>
Source record: 195744

Just a reminder that the ARRL VHF/UHF contest runs from 1800z
today, Saturday 6/14 until 0300z Monday 6/16 (sunday night
local).

Any and all bands above 50 Mhz are fair game.

So dig out that HT or mobile radio and give out a few contacts!!
See how far you can work on 144,222,440 FM from your home
or make a mini-field day and drive to your local hill and be
amazed!.
Hook up your straight key and make your first 2m cw contact!
Dig out that 'ol six meter rig, evict the spiders, throw up a dipole
and talk to someone 5 states away!

Suggested frequencies:

50.125, 50.200 cw/ssb, 52.525 FM
144.200 +/- cw/ssb, 146.49, .55 <don't use .52 for contest!>
222.1 cw/ssb, 223.5 FM
432.1 cw/ssb, 446.0 FM

Don't forget to 'tune around' a bit!

We at Ni9e will be looking for you!

jw
op at multi-op station Ni9e
(now off to put some coax connectors on!)

>OK, look, CW is not the most popular form of communication today.

Very true, now why do you think that might be? Could it be because it has
been supplanted by better methods? Could be.

> I am not sure what is, but it is a form of communication, and a filter.

Well, it is pretty much a tautology that whatever method has supplanted
OOK Morse is a form of communications. Whether communications methods
act as a filter is another matter. What kind of filter might it be? Is it lowpass
or highpass? Even a cursory examination of OOK Morse shows that it is a
lowpass filter for information, since it limits to such a great extent the amount
of information which can be passed in a given time. Is that a *desirable* filter
action? I think not, and apparently neither does the rest of the communications
world since they are abandoning the technique as rapidly as possible.

>Don't partake in the dumbing down of Amateur Radio.

Now there's good advice. Wise up and move on to more effective methods
than OOK Morse. The rest of the world has. Don't try to keep dumbing down
amateur radio by insisting that amateurs atttempt to emulate a modem.
Amateurs should be smarter than that.

5562. Distributors Wanted NOW!!

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-14 00:00:00 UTC
From: Tony Scott <summer@laoffices.com>
Message-ID: <5nue61$84p$9405@cadmium.aware.nl>
Source record: 195749

Hi,

This is a Solicitation Email, we are looking for new TUFF'97 DISTRIBUTORS.
TUFF'97 is a promotional concept for a prospect follow-up system called
"Simple Track". Software designed for Windows 95, 3.11 and NT
machines. (Macintosh users read the NOTE below(*))

Concept:

The TUFF'97 software includes a copy of Simple Track, so you can use this
for your own personal administration (free). However, the TUFF'97 software
is designed to give you BIG TIME credits for just taking the efforts to
PROMOTE it.

How do I get those credits?. Easy, just distribute/promote it. How?
(Give away the software for free, put it on your website/homepage
and let everyone download it. Give it to your friends, attach it by
email etc). With a one time $40.00 (USD) validation code purchase,
YOUR name becomes part of all sofware you sent out to your customers.
When your TUFF'97 software gets validated, all your personal information is
automatically integrated in the software, so everyone knows how to reach
you by phone/fax or email and where to sent the check/money or cash orders.

Basically this is the concept. Offcourse you need the software to grasp
the whole thing. Believe it, there is absolutely no marketing knowledge
required, just ask for the software package, join and start promoting your
own TUFF'97 line. The only thing you DO need is a PC or Mac(*) and Internet.

(*) TUFF'97 is only available for MacOS users running Connectix VirtualPC
or Insignia's Sofwindows 95/3.11. A true MacOS version is not available.

When you're interested in becoming a TUFF'97 distributor and create your own
distribution line, sent a mailto:FiReStArTeR@frodo.com and ask for your
copy of the TUFF software (We'll sent you a download location and install
instructions). This is a serious opportunity, so only serious responses
are processed. If you're not interested, have a nice day.
Best Regards,
Tony Scott

It SSB a "better mode"? Because, after all, that's the only mode on
HF which surpasses CW in usage. Lagging far behind CW are your pet
digital modes. Therefore, is CW a "better method" of communication than
your pet digital modes? Or, is your yardstick of measure going to change
for them?

So, it would seem that any mode which involves "voice" communications,
where two or more people can engage in a conversation, are "better"
than any other, according to your definition.

Here is a summary of news items covered on edition #220 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 20-Jun:
-
1. Anthony Barben Jr, N2WNF, of Brooklyn Get 15 Month Suspension
2. Beverly Baker to Leave FCC Compliance and Information Bureau
3. ARRL Seeks Full Availability of 40 Meters for American Samoa
4. FCC Allocates 1 GHz for Commerical Use at 47.2 GHz
5. "Cyberham Magazine" Put on Hold, Cites Reduced Advertising
6. Mike Lamb, N7ML, to Head Tempo AEA Division Marketing
7. Seventeen Schools Booked for STS-94 SAREX Contacts in July
8. Special Event Station Calendar
9. German SAFEX Repeater Operational from Aboard Mir Space Station
10. RS-10 Still Down, Expected Back Before 10th Birthday
11. Rumors Persist That RS-14/AO-21 May Soon Be Returned to Service
12. Frequency Drift Continues Due to Crystal Aging on AO-27
13. N6TX Signs Full-time Contract with SETI League
14. Delaware Officials Seize Computer of NASA Web Site Hacker
15. Weekly Propagation Forecast
16. "The RAIN Dial-up" from Chicago
17. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
18. "Tower Climbing Safety" - with Greg Stoddard, KF9MP
-
Funding for the program's transmission and production expense has
been provided by a grant from Mike Leiviska, KG0WR, of Andover,
Minnesota, where "This Week in Amateur Radio" is heard Saturdays at
8:00 PM throughout the Twin Cities area, as part of the "Saturday
Ham Talk" net. Presentation of "The RAIN Dial-up" has been made
possible by a grant from Mike Reed, N7ZEF, of Sinclair, Wyoming.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
```

Program audio is on the 6.2 MHz analog subcarrier. On the Internet, audio is available each Sunday in 8-bit .WAV file format, sampled at 11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA. A separate "RealAudio" file is also available at this site. The service is carried on VHF/UHF repeaters throughout North America and by WA0RCR on 160 meters at 1860 kHz.

-

Here in the Capital District, "This Week in Amateur Radio" is heard on our "flagship" repeater, WA2OQE/R in Troy, on 145.33 MHz, courtesy of the Niagara-Mohawk Amateur Radio Club. The program is repeated Mondays at 8:00 PM.

-

Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

I have a better idea. How about people like you saying "thank you" to
the numerous no-code Techs', cided Techs' Genrerals, and other hams in
NYC who recognised this problem, and who as good, law-abiding hams,
used the force of their sheer numbers to force the FCC to act against
this person. They proved that you can force the "system" to work.

^^^^ ^^ ^^^^^^^

Exactly. Isn't it wonderful? And all you have to do to deal with
folks like K1MAN is to ignore them. I've never run into the guy in
all the time he's been operating. Ain't ham radio wonderful? There
are so many things to do in this hobby that no one person or group can
spoil it for the rest of us, no matter what they do.

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-14 00:00:00 UTC
From: laddo@bellsouth.net
Message-ID: <33A31D34.3AF1@bellsouth.net>
Source record: 195757

A little while back, I was browsing these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $5.00! So I thought, "Yeah, right, this must be a scam," but like most of us, but I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 5 names and address stated in the article. You then place your own name and address in the bottom of the list at #5, and post the article in at least 200 newsgroups. (There are thousands.) No catch, that was it.

You can make up to or over $50,000.00 in 4-6 weeks, maybe sooner! I SWEAR, I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're interested in making some big bucks, keep reading; if you're not, I apologize for wasting your time.

So after thinking it over, talking to a few people first, I figured what have I got to lose except for 5 stamps and $5, right? One person who very recently had tried it said it worked like a charm. He started getting money in the mail! He was shocked! He figured it would end soon, and didn't give it another thought. But then the money kept coming IN - tripling in size and multiplying by 10 - 20 times the amount that he got the first week! In his first week he had made a total of over $1,000!!! In the third week he had over $10,000 dollars, and it's still growing! This is his fourth week and he's made about $42,000 Total, and believe it or not the money is still coming in...

I know this has been checked out several times with the legal community and is deemed perfectly Legal, but being a very cautious person, I also wanted to check it out with the US Post Office. I called them

(1-800-725-2161) and explained this process and asked if there were any regulations that would be violated by doing this. Without hesitation, the postal official also said it is legal. At that point, I felt comfortable going ahead and joining the process.

Let me tell you how this works and most importantly, WHY IT WORKS!...Also, make sure you print a copy of this article NOW, so you get the information from it, and begin making money. The process is very simple, and it consists of 3 ease steps:

STEP 1: Get 5 separate pieces of paper and write the following on each sheet of paper: "PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER #." Get five $1 bills, and place ONE inside each piece of paper that you have just written on, and fold each piece of paper so the bill will not be seen in the envelope (otherwise, nosy people who like to steal envelopes with money in it will not get yours). Put one paper inside the envelope and seal it. Do the same for all 5. You should now have 5 envelopes sealed, each having a piece of paper AND the $1 bill inside.

NOTE: Make sure those words that were stated above are written on each piece of paper. What you are doing is creating a service by this. This is PERFECTLY LEGAL. Now, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses:

#1 G. Cisnero

VLN 1151

Unit C-105

1601 N.W. 97th Av.

Miami, FL 33172

#2 S.A.

P.O. Box 758

Grover Beach Ca 93483

#3 C. Smith

240 Sunnyridge ave #112

Fairfield, CT 06430

#4 M.Boles

1159 Harrison Pike

Apt. # 2303

Cleveland, TN 37311

#5 Ladd Straat

200 Jefferson Dr.

Houma, LA 70360

STEP 2: Now take the #1 name off the list that you see above, move the other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there is close to 18,000 groups) All you need is 200, but remember, the more you post, the more money you make!

Don't know HOW to post in the newsgroups? Well, do exactly the following:

FOR NETSCAPE USERS,

1) Click on any newsgroup, like normal. Then click on "To News, which is in the top left corner of the newsgroup page. This will bring up a message box.

2) Fill in the SUBJECT with a flashy title, like the one I used, something to catch the eye!!!

3) Now go to the message part of the box and retype this letter exactly as it is here, with exception of your few changes. (Remember to add your name to number 5 and move the rest up)

4) When you're done typing in the WHOLE letter, click on FILE above the send button. Then, SAVE AS.. DO NOT SEND YOUR ARTICLE UNTIL YOU SAVE

IT. (So you don't have to type this 200 times :-)

5) Now that you have saved the letter, go ahead and send your

first

copy! (Click the SEND button in the top left corner)

6) This is where you post all 200! OK, go to ANY newsgroup

article

and

click the TO NEWS button again. Type in your flashy subject in the

SUBJECT BOX, then go to the message and place your cursor here. Now

click on ATTACHMENT which is right below the SUBJECT BOX. Click on

attach file then find your letter wherever you saved it. Click once on

your file then click OPEN then click OK. If you did this right, you

should see your filename in the ATTACHMENT BOX and it will be

shaded.

NOW POST AWAY!!

IF YOU ARE USING INTERNET EXPLORER:

It's just as easy, holding down the left mouse button,

highlight this entire article, then press the CTRL key and C key at the

same time to copy this article. Then print the article for your records

to have the names of those you will be sending $1.00 to.

NEXT, Go to the newsgroups and press POST AN ARTICLE type in your

flashy subject and click the large window below. Press CTRL and V and

the article will appear in the message window. ** BE SURE TO MAKE YOUR

ADDRESS CHANGES TO THE 5 NAMES. ** Now re-highlight the article and

re-copy it re-copy it so you have the changes.... Then all you have to

do for each newsgroup is CTRL and V and press POST. It's that easy!!

THAT'S IT! All you have to do is jump to different newsgroupes and

post away, after you get the hang of it, it will take about 30 seconds

for each newsgroup!

** REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE

MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF

200 **

This is WHY this works!

Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #5 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #4 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #3 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #2 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #1 and they each only receive 5 replies, that just made me $3,125.00!!! With an original investment of only $5.00!

AMAZING! And, as I said 5 responses is actually VERY LOW! Average is probable 20 to 30! So lets put those figures at just 15 responses per person. Here is what you will make:

at #5 $15.00

at #4 $225.00

at #3 $3,375.00

at #2 $50,625.00

at #1 $759,375.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting your name at number 5 again. Then start posting again. The thing to remember is, do you realize that thousands of people all over the world are joining the Internet and reading these articles every day, JUST LIKE YOU are now!! So can you afford $5.00 and see if it really works?? I think so - People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new

honest people who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual Internet. Remember, play FAIRLY and HONESTLY and this will work. You just have to be honest. Make sure you print this article out RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly. Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to make the money!! Also remember that if nobody sends money then nobody benefits. I'm sure you would want the people after you to send in their money.

So think of it this way, you are giving them a gift in return for introducing

this wonderful money making method to you. If everybody pays, everybody gains.

GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH. ** By the way, if you try to deceive people by posting the messages with your name in the list and not sending the money to the rest of the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he sent the 5 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k. This is the fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time!!! You also may want to buy mailing and e-mail lists for future dollars.

Please remember to declare your extra income. Thanks once again

:)

hello
I have been reading the Ham newsgroups for awhile now.
First I have been studing the "now your talking book"
and have taken the novice test online and passed each time,
have not yet passed the techinician exam.
I also downlaoded a code program. Trying to get to 5 wp.
I like to talk on my CB (their I said it) skip is fun have talk to all of
my surronding states.The reason that I started looking at Ham was to talk
father away.
So which where do I go form here I live in a rual area and have found
no 2m repeaters in my local area.
So where do I go from here?
What kind of equipment should I be looking for?
I have been e-mailing different companies on the web for cataloges.
Well their it is
thank u for your help

There are many "normal means of communication" available to you.
They include cellular telephone, public telephone, in-band amateur
transmissions, CB, GMRS, FRS, even a signal mirror or shouting for
for help. I believe the Fed would like us to exhaust all possible
normal means prior to resorting to the abnormal out-of-band method.

Is this the correct venue to discuss performance opinions? I
appoligize in advance if it is not.

I wonder what users of Mosley Pro-67c yagis think? I am considering buying
one with DX in mind on 10-15-20. Also I'm particulary interested
in its 40m performance.

Other antennas I'm considering are the TH11DXX and the classic
KT34XA. I'd be appreciative of the insight of users of these
different set ups who could give insight.

I've got all the published stats but would like honest feedback
from the field.

Thanks and 73,
Pat

> I miss something in your post (perhaps you copied another message?)

Hi Paul:

No you didn't miss anything, this is Burts normal mode of operation. He hates ham radio, or more specifically I think he hates those who are having fun with it. He probably suggested the digital modes because you don't have to actually talk with anyone, and yes, he is always confusing. He contradicts himself all the time as he has done with his post to you.

1. Don't waste your time with hams
2. Stick to the satellite and digital modes.

I wonder who he thinks your going to communicate with at the other end of the satellite?

You see Burt has a little problem talking with others, if you use any Q codes or any radio slang that is not accepted by the self appointed grammar king of ham radio, then your going to be corrected and told how silly you are.

Don't you find it interesting that Burt is so concerned with how you choose to spend YOUR time?

What was so sad about it? It's NOT illegal, my friends and I used to do
it all the time. We would use 11m and 15m and run full duplex, it was
great fun and we even had some CB'ers stop by the shack to see how we
were doing it. Circa 1978.

> A little while later (abut 5 minutes before I posted this message, I heard

Lighten up dude, clearly the guy wasn't intersted in jamming 2m or he
would have picked his favorite repeater to mess with. Poorest example
for new hams eh? Christ it's got to be better than the never ending
babble on 2m. I'll betcha somewhere some scanner buff was listening and
said "hey these guys are havin fun"

Even if they weren't running crossband, what difference does it make? So
some guys decide to re-transmit some 11m transmissions on 2m. Whats the
big deal?
>
> Lastly, I know the group of hams that does this on a nearly weekly basis

> these guys are extra's, go figure?)

Eric, get a clue, and a life. Why don't you call them on 2m and ask them
what they are doing!! Don't preach, don't play policeman, don't tell
them what they are doing is BAD. Just ask them what's up.
Since you didn't share many details of the transmission it's really hard
to tell.
Mabye they are demo'ing 2m to local CB'ers or worst case they are having
fun laughing at something said on 11m so what?? Sounds to me like
they're having alot more fun than you. Look they are on a simplex freq,
not jamming, whats the big deal?

> I thoroughly expect to be flamed over this (by the locals as well as a few
> of those here (and in other groups that I have not posted this too).

Then go make some new friends and quit worrying about what some "Extras"
are doing on 2m simplex. Do they have any control over they way YOU
operate?

, and generally associate with a higher class of
> people. It turns out that some have brought their bad habits from CB (bad

Eric, what exactly do you know about new motions? and who are these
nay-sayers? What bands have we lost lately? Other than a small portion
of 440 and 220? Seems to me the WARC convention years ago bought us a
whole bunch of new HF bands. When have we lost ANY HF space Eric?
>
> Perhaps we should be policing ourselves more closely.

We do not need any policing Eric, we need guys like you to lighten up a
bit and not be such a god damned busy body worrying about the "image" of
ham radio. Ham radio is doing just fine Eric, why don't you join in with
the extras on 11m and have some fun. Mabye you'll vent some of this pent
up frustration you have.

Hi,
I've been searching casually for several weeks for information regarding the CW County Hunters' Net. There used to be one. Does it still exist ? If you have information regarding bands, frequencies, times, etc, I would really appreciate getting it.

Thanks and 73's,
Tommy

>areas with lots on neighbors all around.

I agree that its nearly impossible be interference free even in your
own home. Where I live TVI is not a problem as most are on cable
(only hit those TV's on rabbit ears). The biggest problem is
telephone interference. I have sent the FCC guide to all my neighbors
and even offer them old WE 500 or 2500 phones for short term loan.
Two have bought telephone filters and the rest switch to other phones
now. I operate some contests but send the wife away as she lives
in fear of the telephone calls during a contest.

The latest problem I have is with a nearby new subdivision using those
touch on lights. We hear then as raspy sigs that travel slowly up the
160 or 80 meter bands then stop and repeat. Some are S9 on 160.
I had the wife drive around in 1994 and sure enough two homes lights
came on as I ran my 8877 amp in the CQ 160.

The recent weakening of the FCC Field Ops Bureau (FOB) will only make
matters worse. Perhaps the interference law aimed at CB amps will
help as we are defined correctly to local law enforcement. Looks like
the commercial interests have won for now ...look in manuals for
Kenwood home stereo..they state plainly that the unit will not work
near a strong BC or ham radio station. After spending mega bucks the
owner does not want to hear this type of cop out...but our gobvernment
has let it happen!

>in order to cause chaos

My Midland FRS unit HAS an external mic jack.

If something causes "overmodulation" on FM, it will essentially be
trashed. Deveiate too much and FM is totally unintelligible.

Many CBers have FM capability in my area. Never do they use it. AM
seems to be the mode of choice.

I'm not worrying.

Last chance to buy an Alpha amp at old pricing....
Only a few days before Alpha/Power raises its
prices on ALL Alpha amps. A small deposit
will hold one for you at the old price...order now!

You're invited to "See The Quality, Feel The Power"
of the latest Alpha Linear amplifiers at Alpha's
new web site:

http://www.alpha-power-inc.com

For additional information about Alpha amps,
please contact Dave Wilson at:

Tel: (970) 535-4173
Fax: (970) 535-0281
Email: sales@alpha-power-inc.com

Alpha/Power was founded more than a quarter century
ago as ETO (Ehrhorn Technological Operations) to
design and manufacture the best possible maximum-
legal-power, continuous heavy duty, HF linear
amplifier for radio amateurs.

Alpha/Power (ETO) amplifiers contributed to the
expressions brick-on-the-key, maximum legal-power
and all modes, no time limit to the lexicon of
amateur radio. They pioneered the no-compromise
desk top amplifier, hands-off no-tune-up operation,
full break-in (QSK), standard 160 mater coverage,
and microprocessor-controlled automatic bandswitching,
tuneup and remote control.

Alpha/Power (ETO) also has pioneered realistic buyer
protection with long term limited warranties (never
prorated and now an unequaled four years), and the
money-back guarantee.

Please respond directly to Alpha, NOT to me! Thanks.

You'll have to excuse Bob, Spew. He mistook you for a human being, he didn't realize you are a lump of Florida aligator shit.

Bob, meet Spew. He's our resident Florida idiot. He has forsaken ham radio for eleven meters, because he can't cut the mustard in the ham bands. VHF repeaters were more than he could handle, so he turned in his no code tech ticket. He doesn't have anything nice to say about anything, much less ham radio. On the subject of ham radio, he's like the little kid who fell in the mud puddle - he can't wait to get up and push the other little kids in too. If he can't go home clean, he doesn't want anybody else to go home clean either.

5601. Re: Can an Active Ham really be RFI & TVI Free???

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-15 00:00:00 UTC
From: Gina Weller <weller@ix.netcom.com>
Message-ID: <33A4BB2F.4FBB@ix.netcom.com>
Source record: 195640

Touch lamps, TVs, telephones, CATV. You name it, it can be interfered with.
While the majority of interference cases can be resolved by judicious filtering,
use of shielded cabling, re-routing of wires, etc., some of the consumer electronics out there is just "basket case." The only way to fix it is to
replace it with something better.

When you reach that point, your dear neighbor will say, "the problem isn't
there until YOU start transmitting, so it is your responsibility to fix it."
Unless you've got deep pockets, you either agree to limit your schedule/band/
power/mode, or take the hard-ass approach and tell the neighbor that the problem is HIS, and you are not going to do anything more. How you handle this
situation will determine whether you and your neighbor continue to have some sort of friendly relationship, or the neighbor escalates his complaint
to his Congressman, makes a public nuisance complaint to the police, or flattens your automobile tires in the middle of the night.

The FCC has the authority (see 47 USC 302) to require manufacturer's of certain types of consumer electronic equipment to meet minimum interference
immunity specifications. The European Community and other countries require
this, but the FCC has generally deferred to industry to resolve problems when they arise. Recently, the FCC has adopted some standards (see 47 CFR 15)
that promise SOME improvement in the interference immunity of TV sets, but
the exact impact is unclear.

Of course, as we transit toward DTV, with its new and unregulated set-top
DTV-to-NTSC converters, PC TVs, and other gadgets, who can say what sorts of
"new" interference problems will crop up. Already, the explosion in the use
of PCs and modems has increased the number of interference cases.

My advice is to do your best to fix the problem (ferrite is magic at HF!),
seeking the counsel of the friendly ARRL Technical Coordinator as needed,
then document the nature of the problem and everything you have tried to fix it. Send this documentation to the EIA (Electronics Industries Association),
with a copy to the manufacturer and the FCC (Office of Engineering and Technology).
If EVERYONE did this, the FCC might actually do something, or, at least there would be a record of the complaint.

I do not blame manufacturers for wanting to save a few dollars by not increasing the interference immunity of their equipment. After all, probably
99.9% of the units sold are operated in an interference-free environment.
But the other 0.1%, representing perhaps tens of thousands of consumers, deserve some attention.

One idea I've put forward is to require testing and labelling of consumer
electronics for EMI immunity. Yes, this adds to the unit cost, but only ONE
unit has to be tested, and, regardless of the test result, it could still be
sold. The testing and labelling could even be optional. I believe that manufacturers would seize the opportunity to "one-up" the competition, by
demonstrating that their equipment is "better" in some measureable way.
There would probably be side benefits, like better immunity to ESD (lightning
strikes). My only desire is to have the immunity test results made a part of
the consumer documentation (instruction manual, or a sticker on the back),
so that consumers can make informed choices.

The test results might look something like this:

"Class I" could be immune to interference at a level of 10 V/m. Class IA,
could be immune at 3 V/m. Class IB at 1 V/m. Class II at less than 1 V/m.
Class III not tested.

My $0.02.

73,

Bob Weller

Sober up and listen - One of my hobbies is to participate in the Amateur Radio Service. There is absolutely no contradiction in treating service work and serving the public as a hobby. Got it?

From my Oxford, Hobby: An individual pursuit to which a person is unduly devoted.

Again, what problem do you see with an individual being "unduly devoted" to (i.e., treating as a hobby) the ARS? Would you rather we weren't unduly devoted?

There are several ways. I recommend getting the program "Supermorse". It's EXCELLENT. You may also want to get a code practice ocillator, like MFJ's, the one with the straight key so you can use it on the air as well. Use supermorse and get the tapes by Gordon west at radio shack, learning the morse code.

5610. Thoughts from a wanna-be

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-15 00:00:00 UTC
From: "Paul F. Monaco" <pfmonaco@micro-net.com>
Message-ID: <5o11v7lhb2@roadrunner.miracle.net>
Source record: 195649

When I was much younger, going to school I was introduced to amature radio by a friend who shared similar interests in electronics. Since my parents where dead-set against any sort of antenna system I could think of (other then the the Rabit-ears on top of the TV) and a fear that I'd get "electrocuted", my quest was stiffled and my electronic "hobby" was limited to shop-class in high school and I deviated towards programming which they considered "safe".

Several years later, when I was married and out on my own, I wanted to get back into electronics and amateur radio but was discouraged as the days of discrete components and and home-made circuit boards seemed to have slipped away, along with my contact with folks that used to be into it.

Now approaching age 40, with more financial resources as well as a world of information available via the Internet I'm thinking about it again. I'm tired of "plug-n-pray", and just plugging black-boxes together to add more "toys" to my computer arsenal. I want to find that thrill I once had as a teen when I heard about "field day", and various emergancy "simulations". It seemed back then that amateurs where everywhere and always willing to help each-other.

Are those days gone? Is there really room for "another ham"? I'm really intimidated by what I percieve as a snobish view of of "newbies" being just a cross-over from the "good-buddy" era of the 70's. Although I don't have an interest in CW, I don't have a problem learning it if it's required. The reason... like many folks, living in a conventional "house" doesn't seem to be an option for me at this point, so that pretty much eliminates any elaborate high-power low-band long-wire set-ups with reasonable performace. For me, mobile VHF seems to be where I'd get the most satisfaction.

And what about good old-fashioned electronics? Are those days gone as well? Scouring the internet I find suprisingly very little information. I thought I would find tons of schematics for various doo-dads, but I'm either wrong or simply looking in thr wrong places.

Even looking at the web-pages for various radio "clubs", I thought I'd find libraries of useful circuits and info, but all I seem to see is pages of laws/by-law and where to send money if you want to join. Living within 15-miles of the ARRL I thought I'd find more help and information then I'd know what to with, but apparently this is not the case.

Thank you for reading my random thoughts, replies welcome, but please don't flame me for improper terminology. If anyone can enlighten me I'm certainly open-minded and still eager to get involved.

Subject: Barbie Hams

Well Burt, guess you didn't see my offer to prove you wrong (at least about many hams) prior to hamvention. I was willing to prove to you that there are friendly, helpful, and interesting (at least to me <G>) hams. BTW I did get an HF rig at hamvention (a Yaesu FT-757GX) so if you are willing to do CW at 5 wpm or can get through on 10M phone when the band is open, I'd be very happy to talk about it further.

OK, you are an ADVANCED class operator. By any means at your disposal means you have access to the EXTRA portion of the bands, now doesn't it???
And a tech plus has the SAME access, doesn't he??
Well it seems to me, that those frequencies would definitely BE AT HIS DISPOSAL!!

REPLY...

I am visiting this newsgroup for the first time and am amazed at what
I have read.

I am a CB operator, and I am thinking about getting a No-code
Technician license.

However, after reading this newsgroup, I have discovered that I am a
child, and asshole, for using CB, and that I would be an unrespectable
operator for using 11 meters.

The messages in this thread are complaining about MN Maniac's
insulting and rude comments. Maybe some of the other people
particapating in this thread should take a look at themselves.

Dwight Stewart

Third party traffic is authorized between the USA and Mexico.

The calling party is the first party. The answering party is the second party (that's the repeater and its control operator), and the third party is whoever is called on the autopatch.

What's the problem; it ain't that complicated.

Drew,
There are a lot of very nice people in the world,
Ham operators in almost every country are very
interesting people to talk to. Every post you
make to this group shows your hostility. Why?
I only have a tech. license now but I m studying
for my General. I keep in contact with Ham operators
in other countries via E-mail and will talk to them
as soon as I get my General, or higher, license. I really don t
care if their spelling and English is not correct.
Friendships are important to me. Unneath all that hostility
there must be a nice person.

I don't believe that we are in disagreement. The nameplate rating of a standby
UPS should not be taken as its sustained rating. That rating provides for the
surge power needed to start fans, disk drives, etc. But it isn't the power level
at which the UPS can run continously, even for a few minutes. The rating I'm
talking about above is the one the UPS can sustain for 10 minutes or more.
A UPS operating at this level *will* have reached thermal equilibrium in under
10 minutes.

For example, the UPS I'm using has a nameplate surge rating of 800 watts,
but you can't draw 800 watts from it continously without disasterous thermal
consequences. At 200 watts, however, its temperature stabilizes in well under
10 minutes.

Message-ID: <33A3FA58.58F4@Bledsoe.net>
Source record: 195699

I have advertised this rig before and changed my mind about selling, but I think I'll give up on HF for a while and stick to VHF and UHF, The rig is a good Swan 500C with the 117v power supply, including mic. Rig is not 100% cosmetically but functions well but is definately not in bad shape. Non-smoker with me only, (Don't know about previous owner).
I would like to trade the rig for dual band equipment or 2 meter duplexers, a straight sale is an option, but a trade is my goal. E-mail me with any deals you have.
Thanks,
Sam Johnson

>Looking for comments on their performance so I can decide if they're worth
>the $.

I bought the Comet multibander for use with my IC-706. I should have known
better, of course, but I wanted to go mobile quick and easy. Well, it is quick
and easy, but the performance is, as one should have expected, a very severe
compromise. I could have gotten the same level of performance (perhaps a
bit better) with a handful of Hamsticks, and saved some money. Or I could
have constructed a Bugcatcher type of antenna and gotten more performance,
also for less money.

Subjectively, I'd say the Comet's performance is inferior to the old Hustler. It is
slim and trim, but that translates to a higher loss resistance and narrower usable
VSWR bandwidth. It is well made mechanically, and it is more attractive to eyes
which find large HF mobile antennas distasteful, but it isn't a very efficient antenna.
If a 13 foot monster with a top hat doesn't offend you, I'd recomend going with a
Bugcatcher instead. If you can't live with that, a screwdriver type antenna is likely
to still work better than the Comet. If bucks are a factor, go with the Hamsticks.

Herb, I operated for 6 years from an 8th floor condo, HF antennas on the roof and 1500 watts output. All the TV here is cable. Never had any complaints at all, except from one ham on the other end of the building :) Another six years in a subdivision, lots are about 75 feet wide and I'm in the middle of the block. Still no complaints from anyone, except my wife - 4 watts of 9600 buad UHF packet wipes out channel 18 on our cable. I think the trick to no TVI problems is cable, here we have more problems with cable TV leakage interfering with us than we do us with the TV. I have had a few minor problems in my house, modem disconnecting when operating at full power on 160, but that was easily corrected with a small inexpensive line filter. My first choice would be 3 or 4 acres on top of a hill, but it's possible to survive in a subdivision........

It may even be the way to meet the girl of your dreams, I talked to a ham in the states a few weeks ago on HF, and then to his new bride, who is now an extra class. They met when she came looking for the owner of the big antenna who was screwing up her stereo.......

Source record: 195707

Hello All;
I'm selling the "MFJ-1270CQ: MFJ TNC-2 Packet Controller Turbo Plus"
with the 9600bps modem installed. This tnc/modem has all the features
of the "MFJ-1270C" plus builtin 9600bps G3RUH modem for 9600bps AX.25
and 9600bps AFSK operations.
The MFJ-1270CQ is fully TAPR TNC-2 compatible with KISS interface,
MFJ Host mode * Anti-collision technology * Enhanced personal Mailbox
Plus Much more.
Included are all original docs, manuals, box and accessories. This
unit is still under MFJ's Unlimited 100% Warranty. It has less than
4 hours use. It's Basicly New Out Of The Box!..Reason 4 Sale: I just
bought the new AEA/Timewave DSP-2232 that includes all PacSat modes,
Wefax, SSTV & more.. Also I am a non-smoker
New it sells for around $229.99 +shipping. Asking $195 +shipping.
All cash offers will be considered..
Please call 1-609-386-9382 10am to 10pm Eastern Time..

>That's a simple and true statement and it should be plain enough. Or
>do you really believe that I just gave you permission to rob a bank?

I won't get into the childish name calling and the obvious "12th grade"
English class bull that you would be so open for after reading the below:

Goto http://w5ac.tamu.edu/ham-exam-v2/ham-exam.html
Check out the following two questions in the NOVICE question pool:

N1J08 Q: If you hear a voice distress signal on a frequency outside of
your
license privileges, what are you allowed to do to help the
station
in distress?

A: You are allowed to help on a frequency outside your
privileges
in any way possible.

N1J11 Q: When you may you send a distress signal on any frequency?

A: In a life - or property - threatening emergency.

>> Sorry, but I totally disagree with you on this point. It is clear to me
>> that the intended use of this clause is emergency traffic and it's
>> possible use out of band. I will have to go through my question pool
>> again, but beleive this was included in there somewhere.

>Please come back with the question from the pool that you believe
>helps to make your point. I gave my question pool books to a friend
>who's moving up the incentive ladder. If I hear nothing more I'll

>assume that you found the question and now see the light.

>Please note that the FCC knows well enough how to permit something

I hope you now 'see the light'. I have to know my business.
You are too quick to call a person mistaken and to make 'digs'
about levels of education. I do not want to do that. I was attempting
to HELP, as you were, too. Next time you will probably be right.
I am sure you didn't get that 1X2 callsign by being an idiot. I wish I had
one :)

Yes, but I understand you must put the CD back in the
drive every third time you start the program!? Most of us
wish to leave one of the call sign data base CDs in the
drive just about all the time. According to the author,
that is just the way it is, copyright protection, I guess.

1997 PACIFIC NORTHWEST DX CONVENTION. The PNW DX Convention moves yearly between, Washington, Oregon & British Columbia. This year it will be held at Richmond, B.C. on July 25, 26 and 27th. If you are considering attending and wish additional information, please contact Ken Thompson, VE7BXG, P.O. Box 3048, Blaine, Washington 98231 or Allan Buckshon, VE7SZ, via E-mail at: abucksho@direct.ca. Also checkout their Web site at: www.davetek.com/pnwdxconvention/dxcon.htm

5Z, KENYA. The "DX News Sheet" reports Christine, a YL operator, is curently active from Kiambu as 5Z4LL and is often found around 1500z on 18145 kHz. QSL to Box 14425, Nairobi, Kenya.

9H, MALTA. The 10th DXpedition to Malta organized by the V.R.Z.A. (Dutch Society of AmateurRadio) will take place from Saturday, 21st June up to Saturday, 5th July. There will be fourteen hams in Sliema, QTH-locator JM75FV, using their own 9H3-callsign. They will activate IOTA EU-023 on the HF-bands, 80-10 meters as well as 6 meters, CW and SSB. There will be four complete stations available. (Last minute update received before going to print: "To commemorate this 10th VRZA DXpedtion to Malta a special clubstation callsign is been issued: 9H0VRZ.") Operators are: 9H3IE/PA0BEA, Frits; 9H3KE/PA0PAN, Nick; 9H3ON/PA3BIZ, Bill; 9H3QD/PA0JWK, John; 9H3QG/PE1JFR, Francois; 9H3TD/Teun, PA0TPM; 9H3WA/PA3EPV, Phillip; 9H3WH/PA0JR, Andre; 9H3XQ/PA0CKV, Kees; 9H3YM/PE1OFJ, Sjirk; 9H3YN/PA3CUZ, Madeleine; 9H3YO/PA3AGZ, Wim; and 9H3YP/PD1ABY, Dick. More info and QSL direct addresses can be found on on their WEB site: http://www.pi.net/~vrza/malta.htm

9M8, EAST MALAYSIA. Arie, PA3FWG, will be active during the month of July for about a month as 9M8ZZ. His activity will include RTTY. No other details were given.

CY9, ST. PAUL ISLAND (Just an early reminder!). Mike, VE9AA, wants OPDX to remind its readers that CY9AA will be active June 26-July 3rd. Operations will be on 160-2 meters with one station on 6 meters FULL TIME on 50.101MHz. CY9AA operators will be: VE1PZ/Doug, K7BV/Dennis and VE9AA/Mike. Also, check out the Web site "http://www.uksmg.org/cy9.htm" to read all about their upcoming trip to St. Paul Island. The LATEST UPDATE, dated June 10th, will be sent to all OPDX InterNet Subscribers as an additional bulletin.

FK, NEW CALEDONIA. FK8HC, although weak, has been heard during East Coast mornings (around 1000z) on 3799 kHz. Also, VKs and Zls stations were on awaiting the VK0 group in Maquirie Island to come on the air at about 1200z.

IOTA NEWS......
Mauro, I1JQJ, states YB5NOF/8 told him that Bynny, YC8YZ, will be portable from Obi Island (OC-???) until June 19th. Operations are expcted to be on either 7090 or 21260 kHz (he has no other band available). QSL via YC8YZ: P.O. Box 67, Ternate, Halmahera Island 97716, Indonesia.

Joel, F5IPW, will be active from Oleron Island (EU-032) from June 28th to August 31st and will be especially active for the IOTA contest.

Alaina, F6BFH, will probably be active as G/F6BFH in July from Isles of Scilly (EU-011).

Albert, FO5JR, will take his Christmas holidays in French Polynesia and plans to activate Rimatara Island (OC-050). He will take his TS-440 and dipoles with him and will operate CW only on 7010, 10110, 14010, 18110, 21010, 24910 and 28010. More details will be reported later.

Phil, G3SWH, will be active on CW only as SV8/G3SWH from the Island of Mykonos (EU-067) until June 20th. This will be a holiday operation and activity will be on all bands from 80-10 meters but limited to an hour or so in the mornings, usually between 0600 and 0800z and in the afternoons, usually between 1500 and 1800z. The QSL route is via G3SWH, either direct or via the RSGB Bureau.

George, SV1QN, will once again be active from Myconos Island (EU-067) as SV1QN/8 during August. Activity will be SSB and CW, but this time he will also work RTTY and SSTV with pictures from the island. His operations will mostly be on 20 meters with some activity on 80, 40, 15, and 10 meters (depending on the propagation). QSL via his CBA or via the SV-bureau.

JW, SVALBARD. Leif, JW2PA, will be active from July 18-26th on all bands from 10 to 80 meters. Activity will be on CW and SSB. QSL to home call LA2PA direct via callbook address or via bureau.

MIDDLE EAST GROUP ACTIVE. Naser/A61AN, and Murtada/9K2MU, are on almost daily on 14240 kHz. Both have S9+ signals into the East Coast. They have been assisting other Middle East/Arabic stations (TA, SU, 7X, A7.... all heard) in working DX. They come on about 2200z until the band dies or they get too sleepy.

QSL NEWS AND INFO......
Jean, F6AJA, reports he has received the HP1XBI/1 QSLs from the printer. Gerard, HP1XBI, was active from Contadora Island (NA-072) at the end of March. All direct cards will be answered by mail as soon as possible.

Scott, N1SP, reports the W1 QSL Bureau has been receiving cards for JY6ZZ. This is not correct. Please QSL JY6ZZ direct only!!

The QSL route for the following stations is via KP4AM (1997 Callbook or earlier): KP4AM/D (Desecheo Is. 1979), KV4IM, VP2VDK, VP2V/KP4AM, NP4P and ZF2DN.

Tony, WA4JQS/VP8BZL, Director of Operations - South Sandwich Island Antarctic DXpediton Group (SSIDXG), has advised OPDX that the he has (in hand) the landing permission from the Fish and Wildlife Dept. for Chuck Brady's, N4BQW, Midway and Kure Atoll operations which took place in May of 1997. Tony has faxed the document to the DXCC Desk and also other interested parties. Chuck is a member of the SSIDXG, and his operations are SSIDXG supported. Chuck did not request funding for this operation because he did not know if the WX would allow him to land at the time. His out of pocket expense are $6000 (USD), and any help that you can include with your QSL cards to offset this cost would be greatly appreciated. Chuck is also currently active with other SSIDXG operations in the works..

Lee, KH6BZF, advises OPDX that he is the QSL Manager for Dave, T9/WA5IKQ, and would like to clean up any and all requests for BOSNIA QSLs that might be wandering around. QSL T9/WA5IKQ via KH6BZF (+IRCs, SAE or SASE + Amount in US AIRMAIL POSTAGE): Lee R. Wical, KH6BZF, 45-601 Luluku Road, Kane'Ohe, HI 96744-1854-25

SPECIAL EVENTS.....
The Rochester, New York DX Association (RDXA) will be celebrating its 50th anniversary this month. The club will operate with its club callsign with the addition of a /50 for the event; W2RDX/50. Look for them to be on the air operating CW, SSB and RTTY. Operations will be in various parts of the band (Time will be spent in the DX, General and Novice portions of the bands). Look for them to be on the air from June 21st at 0000z until July 6th at 2359z. A special QSL card will be available. Stateside and Canada QSL to: AF2K, Irv Goodman, 515 Drumm Rd., Webster, NY 14580. A regular size envelope will do. DX stations may QSL via the bureau. Look for W2RDX during Field Day too!

Cedric, HB9HFN, reports the section of Fribourg of the Swiss Ham-Radio Association (USKA) is celebrating its 60th anniversary and will use the callsign HB6FG until the end of 1997. QSL via bureau or direct via

HB9FG.

Lithuanian station LY97XA will be active from July 10-20th, to help celebrate the 300th anniversary of Vilkaviskis town. There will be an award (Vilkaviskis-300) available after gathering 5 points for contacts on all shortwave bands with the members of the radio club " Varpas". A plaque "Vilkaviskis-300" is given to a radio amateur after gathering the most points. 2 points are given for contacts with LY97XZ, while 1 point is given with contacts for Varpas members. You can repeat the contacts in different bands. All contacts are counted from July 1, 1997, until December 31, 1997. Conditions for SWL are the same. Applications and the payment of 5 USD for the award can be sent until July 31, 1998, to the following address: P.O.Box 7, Vilkaviskis 4270, Lithuania.
The station of the Radio Club "Varpas": CT1DW, DK1XT, DL1GBP, DL6GN, LX2DW, LY1DM, LY1DW, LY1DY, LY1EM, LY1FAE, LY1FAG, LY1FAK, LY1FAT, LY1FAU, LY1FAV, LY1FBG, LY1FCA, LY1XA, LY2BDT, LY2BEE, LY2BEO, LY2BGP, LY2BGW, LY2BOK, LY2BVD, LY2BVQ, LY2CQ, LY2HT, LY2KA, LY2LI, LY2NLK, LY2PAQ, LY2PU, LY2RB, LY2RF, LY3BLI, LY3ET, LY3GF, LY3GM, LY3NGZ, LY3NHD, LY3NHK, LY3NJD, LY3NMJ, LY3NNK, LY3NOY, LY3PDS, LY4AB.

VK0, MACQUARIE ISLAND. "The DX News Letter" reports Tom, VK0TS, has a sked with Jim, VK9NS, on 14222 kHz each Saturday and Sunday at 0345z.

WEBSITE. Ron, WB3LHD, says to check out the WESTERN PA DX ASSOCIATION (WPADXA) website at: http://home.att.net/~rcberry/wpadxa/

ZK2, NIUE. Alan, VK4AAR, reports to OPDX that he is the QSL Manager for Paul/ZK2PJ and Janice/ZK2JJ who will be on Niue Island for the next 2 years. Paul is currently preparing his antenna system and will have a Quad antenna up soon. ADDED NOTE: Alan mentions he is also the QSL Manager for YJ8AA and VK8MI (March 1996 operation on Melville Is), but PLEASE NOTE that Paul is good direct ONLY via the 1995, 1996 and 1997 CBA (callbook address) ***ONLY*** Here's the address for those without the right call book: VK4AAR, Alan Roocroft, Post Office, Dalveen QLD 4374, Australia.

Hang in there, Gayle. With that attitude, you'll get a lot of
enjoyment out of the hobby. The creeps are a small minority, but they
stand out. Ignore 'em.

>your pet digital modes? Or, is your yardstick of measure going to change
>for them?

How much "communication" is taking place on the various digital modes,
including Morse? How much data is moved by Morse, compared to the
other digital modes? Just because more people are using method "A"
does not make it "better" than method "B."

>So, it would seem that any mode which involves "voice" communications,
>where two or more people can engage in a conversation, are "better"
>than any other, according to your definition.

"Better" is a subjective judgement. Some deluded folks even like AM
on 75 meters. That doesn't mean it's "better" or "worse" than any
other legal mode. It's certainly less efficient, however, and that's
an objective measurement, not a subjective one. By that criterion,
Morse is less efficient than newer modes in most cases.

Hi,
Name is Gary,
I have for sale a Yaesu ft-890AT, this radio has the optional CW and
SSB filters,
MH-1 B8 microphone and two owners manuals.
This radio has never been mobile and is in excellent shape.
I just do not use it much and could use the money.
I am asking $800.00 FIRM and you pay shipping.
No Trades
Please repond to me by phone@ 503-842-1202 after 5 pm pacific time.
Or by E-mail, my NEW E-mail address is: gbaker@eicbbs.wseo.wa.gov
DO NOT REPLY TO THIS ADDRESS
I have since moved out of area and gbaker@pacifier.com is no longer

5655. Help with AEA LogWindows v. 3.0

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-15 00:00:00 UTC
From: "XXir003432@worldXnet.att.net" <XXir003432@worldXnet.att.net>
Message-ID: <33A49DA1.7B7D@worldXnet.att.net>
Source record: 195733

After receiving my vanity call sign, I tried to enter the new call into the logbook of AEA LogWindows v. 3.0. No way to change the callsign. I even deleted every trace of LogWindowes from my hard drive and re-installed it, entering my new call. Old call still comes up when I use LogWindows. I have prowled around in all the .ini and .dat files, changing from old to new call sign wherever I found the old call sign. Still no luck. When I run LogWindows and click on Logging, it shows my old call sign and it prints my old call on the log sheets. Surely someone else out there has encountered the same thing. What to do?

Joe, W4HH

5656. Re: Anyone Still Using Windows 3.1?

Newsgroup: rec.radio.amateur.misc

Yes, I still use Windows 3.11 on both my machines at home and my one
computer at work. However, some brilliant person, who is no longer
employed with us, decided that we were going to Win 95 at the office.
It is on about half our machines and everyone hates it, even the folks
whoare proficient in it. What I find maddening about Win 95 is that it
is dumbed down. I mean, really, what in the hell is an icon that says
"MY Computer" supposed to mean?

Yes, my wife did the same. Then, she said that if I did not turn off
the radio this minute, she would leave.

I sure do miss her biscuits.

5658. *NEW* Fox_Tango Reflector

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-15 00:00:00 UTC
From: ShortCkt <ShortCkt@primenet.com>
Message-ID: <33A49733.35F1@primenet.com>
Source record: 195736

NEW Fox_Tango Reflector

Fox_Tango is a mailing list (reflector) devoted entirely
to "vintage" and "classic" equipment manufactured by the
Yaesu Musen Co., Ltd. of Tokyo Japan.

* equipment, accessories
* collecting, restoring, refurbishing
* buy, sell, trade, swap
* repairs, modifications, enhancements
* questions, discussions, etc
* just plain operating old Yaesu stuff

To be added to the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: subscribe fox_tango

To be deleted from the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: unsubscribe fox_tango

To post items to the reflector, send email as follows:
TO: fox_tango@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

Could you help me? Tnx, Bob N9GG

5660. Wanted: Software for computer control software for the Yaesu FT-900

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-15 00:00:00 UTC
From: "Paul J. Anderson" <pja@wrmed.com>
Message-ID: <33A4C34C.4125@wrmed.com>
Source record: 195738

Greetings:

I'm looking for information on computer control software specifically designed for the Yaesu FT-900. I have located a fair number of programs that do CAT in a fairly generic way, but would love to have one which matches my FT-900 and knows about it's features.

Thanks,

Paul J. Anderson

Sign me up I quit ARRL a while back because of this.

This whole think is crazy. Use the band plan. Test for access to each section of the plan. You want to play in CW test for CW. You want to play digital test for digital etc.... This is sure going to grow the ranks.

Before everyone says crazy things about this. I have tried CW. I cannot hear the different tones. (I cannot tell an N from a A or T from an E) An the tones that I do hear hurt my ears. I guess you could call me tone deaf.

I have however hear more that one Extra put Packet to the repeater, or not be able to get the computer to talk to the TNC and Radio.

Speaking of my "web site" (actually an FTP site) and the "HF morons" you mention, how many of those fine folks from 75 meters are no-code techs? You know, the ones who jam, run illegal power, use profanity, etc., on a nightly basis...the very ones whose voices I have on the "web site" you mentioned.

How many of them are no-coders, Mike?

Daniel Perez <perezd@ix.netcom.com> inquired:

>Hello I am new to ham radio and would like to have recomendations on the
>best way to learn morse.

Don't bother. Nobody uses Morse anymore except for YE OLDE FAHRTZ ham
operators. Soon, the Morse requirement will be dropped and nobody will
use it there, either. More and more beepers get the silent key every day.

Instead of wasting your time learning a useless skill like Morse code, use
the time and effort to lobby for elimination of the outdated Morse
requirement.

There seems to be some confusion as to what we can do in certain hypothetical scenerios.

If I am in distress, involved with an emergency that presented an immediate threat to life or property, I will use "any frequency I want" if normal means of communications are not available. Again this is when I am a station in distress. There is nothing in the FCC's rules (part 97 or any other part) that will prevent me from using whatever means of radio communications I had at my disposal to attract attention, make known my position and condition, and obtain assistance. If that means leaving the amateur bands, so be it.

But not every emergency involves the immediate threat to human life or property. What I describe above is not the same as assisting to facilitate relief efforts in time of emergency or local disaster. In

these situations I would not use frequencies outside the amateurs bands without the concurance of the proper authority.

It also doesn't mean that if I am firefighter I can use a modified ham radio for use on the fire departments private land mobile channels (in violation of type acceptance requirements) just becasue "if I am called out by radio it will be an 'emergency'". If I can reasonably be expected to be in such a situation I should have the appropriate radio and license (or authorization).

Regards

Subject: Lookin' fer a part

I'm looking for a source of the Stag 455-4-lug IF transformers. The standard ones found in the All American Gutless Wonder 5 tube table radios, the AD/DC types with the 50C5, 35W4, etc. tube lineup. Must be the chassis mountable type, the ones that installed with the "U" shaped brass colored hold down clip. Naturally equivalent units would be fine... I bought up all the ones at our local radio/tv parts store/museum. Theirs were made by J.W.Miller... BTW. does anybody have an Email address for Miller or Stag, if Stag still exists?
Thanks for any help... Stan. Oh, please respond to the Email address, thanks.

From: Matt Staroscik <staroscik@sowest.net>
Subject: My Maha NiMH battery experience

I got a Maha MH-FNB-38 NiMH battery today for my Yaesu FT-51R. It's a 650mAh, 9.6V nickel metal hydride pack, and is basically a clone of the factory Yaesu NiCd pack.

When I got it home, I quick-charged it. It only charged for about 30 minutes before my NC-50 rapid charger said it was full. That's odd, because the factory pack charges for about 1 hour. I started using the radio, but the pack went dead early. Also, the battery checker in the 51 incorrectly identified it as a type 31 battery, even though the voltage looked like a 38 (that is, starting at about 11V).

I emailed Maha earlier today and explained all this to them, and I got mail back tonight at about 10:30. They told me that a NiMH pack that has been in storage for some months may be "asleep" and it should be cycled about 5 times to break it in. While it is "asleep" its charging characteristics will confuse the quick charger and cause it to stop charging early.

While the jury's still out on the battery, the customer service is good. I'll post a follow-up once the battery is broken in. I hope it works out.

Man, I'll tell ya, that is a good question. I just thought I'd visit
this newsgroup to see what's going on in the ham world these days, and
I guess I thought there was some back-biting in some of the other
ng's, but there is some serious venom here. It DOES sound sorta like
what you hear on the good ole' CB.

Go ahead, I'm a big target.

Sheesh! How long does this go on?

Masa is a new ham (like Steve was not very long ago) and his
call has not yet been picked up by QRZ.

Masa, welcome to Amateur Radio, and be assured that most
hams are most anxious to welcome newcomers. We were all
newcomers at some time and perhaps not all of our questions
were "smart", but don't be afraid to ask. Ignore the jerks who
feel a need to "validate credentials".

The discussion centered around the design factors involved, and performance
limitations resulting from running a UPS from an essentially infinite
source of
DC power (such as an auto power system which is continuously recharged
by the running engine).

We all are aware of the obvious fact that a small UPS battery will run down
in some specified time at some defined load.

In addition to older Amateur Radio Handbooks, as mentioned by others, I
remember that the Radiation Laboratory volume "Microwave Receivers" had
a very detailed chapter on superregens.

The one-sentence explanation is that it's a regenerative detector that
is driven into and out of oscillation at an ultrasonic rate, providing
a controlled way to go "beyond" the critical point of a normal regen
detector.

. . .
would not. What exactly are you saying are the consequences
of turning the computer off with the program still running?
<<

re. Win95 crashes scrambling your hard drive.

Here's a really good tip that has saved me and my users many times:

In Settings, Control Panel, System, Performance, File System,
Troubleshooting, check the box that says: "Disable write-behind caching
for all drives."

This will make things run a little slower. But if the machine crashes, you
won't have buffers in memory that have not been written out to disk. The
latter can turn your file system to chopped liver.

This setting does not affect *read* caching, which gives you the majority
of your cache speed gain. Unless you're doing lots of big database work,
the small performance hit is well worth the lowered risk. Its effect is
similar to using "SMARTDRV /X" in Windows 3.x.

Turning off write-behind cacheing in Win95 is much more important than in
Win3.x. Win95 uses your disk as a scratch pad a lot more, 32-bit disk
drivers are writing directly to the disk controller, and much more stuff
is open at once.

REPLY...

I am visiting this newsgroup for the first time and am amazed at what
I have read.

I am a CB operator, and I am thinking about getting a No-code
Technician license.

However, after reading this newsgroup, I have discovered that I am a
child, and asshole, for using CB, and that I would be an unrespectable
operator for using 11 meters.

The messages in this thread are complaining about MN Maniac's
insulting and rude comments. Maybe some of the other people
particapating in this thread should take a look at themselves.

I run a 1500 watt UPS off my solar supply CONTINUOUSLY!
It is a BEST Power true sine wave UPS.
I have had no signs of needing to de-rate it.
(It's powering my PC right now!)
I have used it to deliver power when the commercial supply failed
running at full load for up to 3 days. I have my large power storage
connected via 200 amp connectors to the UPS.
Perhaps the modified pseudo-sine wave units require de-rating.

DON'T YOU JUST LOVE IT?
Here is a medium of communication which is rife with warnings about
spamming and someone tries to sell a book about some of the other
things that can happen, and WOAAAH ! ! !

Several bright, witty, modern, information-seeking, even STUDIOUS
hams get online for the express purpose of denigrating his book
without ever knowing what it says.

I Myself, invented something and asked for some information or
advice on the net about protecting it, and got nearly 60 replies,
all but 3 of which told me it couldn't be done.. No Idea in the
world what I was talking about, but they knew it couldn't be done.

Worse than that, I once turned in a thief on a construction job, and
it cost us everything we had. We have never recovered. I had to
stand trial, I now have an arrest record, and the thief, so far as I
know, went on stealing from his next job.

Here we got something a lot simpler than that. This might be nothing
more than a reprint of a gov doc about watch yourself on the net,
it might be something equal to Packard's or Key's warnings about
advertising, but IT DON'T MATTER ! ! ! You ain't gonna listen anyway.

BE PROUD OF YOURSELVES !

Surely there is something you can be proud of. A new car, maybe?

ciao.

The no-coders offer no reason to think that hams are supposed
to operate in a vacuum, either, until their own evidence gets kicked
back at them.

QUOTE
the us coast guard stopped using code.

UNQUOTE.

This is offered as a reason to drop code.

QUOTE
A ship in distress uses code to seek aid.
UNQUOTE

This is NOT acceptable as a reason not to drop code, because
the ship wasn't crewed by hams.

I am reminded of general short-pants of Pearl Harbor fame, who,
upon bveing warneed to be alert for hostility, violated many, many
available tenets of warfare and clumped his aircraft in the middle
of Hickam field instead of dispersing it like he should.have done.

One of his aides testified that the general was reminded by a
subordinate about dispersal, and the general defended his action
by mentioning the entire Hawaiian Japanese population of about
a hundred thousand men, women, and children, as reason they
couldn't guard all those planes if they were dispersed.

When reminded of the possibility of shellfire of bombing, the general
Pooh-Pooh-ed all that with fine disdain. The japs, he said, couldn't
get within bombing range of Hawaii.

Now, we gotta getr rid of code because some other short-brains say
we must.

What a marvelous world.

5675. Re: best way to learn morse

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-15 00:00:00 UTC
From: moritz@ipers1.e-technik.uni-stuttgart.de
Message-ID: <5o0old$d7k$1@news.belwue.de>
Source record: 195788

>Hello I am new to ham radio and would like to have recomendations on the
>best way to learn morse. Should I get the tapes and if so which is the
>best or should I get one of the computer programs and again which is the
>best or should I get the handheld morse tutor from MFJ.

Hi Daniel,

Programs are fine, a good choice is supermorse (SM). comfortable
and in the doc a lot of explanations. I also found CP222 simple to use
and good. Tapes are may be not needed. If you want to use a personal
stereo you can make custom tapes from your favoured computer program.

Do nor worry if some say morse is on the way out, it gets through
poor conditions if all else fails and will stay therefore.

I would say the most bang for the buck comes from Sangean. The ATS803
and all its permutations. Radio shach carries the Sangean line under
its brand name. But they also tack on about 20% for doing so....73

Disagree....

When there is a "immediate threat to life or property" just how long are supposed to spend exhausting all other forms of communications.

Where are you when the emergency occurs???

Is there a public phone available? Are you supposed to hike for hours to get to a phone while someone is drowning under a capsized boat in a lake?

Does your cellular phone work? I can tell you that I have my cell phone with me more often than a handheld ham radio - and the cellphone does not always work.

Ham radio? What if I am in an area where I don't know about local repeaters (I have VHF and UHF when mobile - I own no HF equipement so HF is "not available" to me). How much time am I supposed to spend trying to find help on amateur frequencies when I may not have even turned on the radio prior to the emergency and after I dug it out of my trunk? If you were under a capsized boat how long would want me to spend? You think the FCC gives a rat's butt about "part anything" in a life threatening situation?

Jeff, would you not respond to a mayday call on 156.800 because the station identified himself as ham? Would you tell report him to the FCC as a violator - what rule did he violate?

GMRS??? I don't have a GMRS license. Under your interpretation I can't use that either. And if you asked me to recite any GMRS frequencies without looking them up - I couldn't.

Regards

Curtis

5679. Humor: Very Low Tech solution

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-16 00:00:00 UTC
From: Steve Kremer <steve@jokewallpaper.com>
Message-ID: <33A5ABC5.860D9FC4@jokewallpaper.com>
Source record: 195592

I recently received the latest catalog from AES (Amateur Electronic Supply). On one page they
have a listing for a vehicle PA that you could use to monitor your mobile radio by it's loudspeaker.
They have a very low tech solution for interfacing between the radio and the speaker amplifier. I
thought it was too funny not to pass along. ----- Steve Kremer, KF9ZA

Below is the exact text taken from the catalog page:

VS&#65533;3 Vehicle P/A and
AirHorn with
Rebroadcast
A big, powerful airhorn
sound with four differ-
ent sounds (no siren)
really calls attention to
your vehicle. Delivers
120 Dba at 4 ft. By locking down the microphone
with the supplied rubber band, you can monitor
sound from a mobile rig, scanner or radio via the
speaker outside. Includes horn speaker, micro-
phone, electronic center, 10 ft. cable, mounting
bracket and hardware. 12 VDC at 1.5A..... $129.95

I disagree. "These rules" can certainly apply to everything from part 0
to part 216 of 47 CFR. In certain parts of the FCC rules there phrases
like "unless otherwise defined in this PART" (my emphasis) So there
certainly is room for interpretation of the term "...these rules...".

If you have advice from FCC counsel stating that amateurs are not
permitted under conditions of distress from using "whatever means of
radio communications they have at there disposal when normal means are
unavailable" please share it. Would also like to hear about any action

taken by the Commission against any amateur that went outside the rules when in distress.

I appreciate that you acknowledge the absurdity of your example. I
could certainly write another compelling scenerio would easily justify
extreme means.

If the threat was sufficiently grave, then there is "No provison of
these rules [that] prevents the use by an amateur station of any means
of radiocommunications at its disposal to provide essential
communications needs in connection with the immediate safety of human
life and immediate protection of property when normal communications
systems are unavailable."

> > There is nothing in the FCC's rules (part

> There ARE laws against the unlicensed use of radio transmitting
> equipment except for certain services such as cordless phones, CB,
> baby monitors, garage door controllers, etc.

But there is no "provision of these rules" that prevent a station in
distress from using a means of radiocommunication at its disposal....

> I asked about this in the ham-law reflector and so far there've been
> nine comments posted on that topic. Not one of the lawyer/amateurs
> has suggested that offering help outside the ham bands was lawful.

The rules are pretty clear on this. I still have a hard time believing
that no one can read this. Read the sections... word for word. 97.403
and 97.405(a) and (b). Both sections (three paragraphs) start with the

SAME nine words, "No provision of these rules prevents the use by..." If the rules explicitly do not prevent under the "exceptional circustances described" then such action would be lawful. (The phrase "exceptional circumstances" is used in 97.405)

Don't take this the wrong way but I pray that neither you, Jeff, Gary, or anybody is ever in a situation where you need help and some ham with a capable radio is trying to send signal with mirror to whoever because he is afraid to move up ten MHz and make the call.

Even if the rules expicitly said such communication was flat out illegal no matter what, I would send my ticket back to the FCC right after somebody (myslef or someone I called) saved your life. But I won't worry about it since such is permitted.

Regards

Curtis

>Where are you when the emergency occurs???

So many people obviously can't read: "exhaust all possible normal means
prior to resorting to an out of band method".

Is that fairly clear? I'll explain:

If you're in a car and get into an accident use a cell-phone of someone
who pulls over to render aid before you get on your 2 meter HT and
call for help on the local cop's dispatch frequency.

If you're in the wilderness 100 miles from anywhere, check the signal
strength meter on your cell-phone to see if you have a signal, and if
so, use that. Otherwise, break out your 2 meter radio.

Why do people necessarily complicate this?

MD
--
-- Ted Kennedy has killed more people with his car than I have
-- with my guns.
--

Daniel
First, I hope the responses from some LIDs don't discourage you or turn you away from Amateur Radio. CW is but one of its many aspects and maybe one of its most satisfying.

I did find a good tutorial about CW on the net - you might try URL
http://griffy.nmt.edu/sara/sara/finley.morse.html
There is no need to spend any great amount of money. If you have a receiver available, the ARRL has code practice sessions each evening, the schedule is in QST magazine (about $5 on larger newsstands) or check their page at www.arrl.org Tapes are available through the ARRL or at electronic stores catering to hams.
SuperMorse is one of the more popular PC programs and is shareware. Dave's page has a copy of SM ver 4.04, but ver 4.15 is available - you can search the web for supermorse. Both are quite usable, but 4.04 may have some windows and timing problems with a 486 or higher machine - use the DOS prompt.

Good luck
Dan KA1SZP

Well at least Jerry haS THE INTESTINAL FORTITUDE to use his name and callsign. The two previous entrants were from the gutless wonder listen to twenty meters and qrm and make noise but I can't transmit there because I'm too stupid to be a general class crowd. Doug is a skilled cw operator who has one hell of a signal on 20 and always has a bunch of gnats like the other two posters continiously qrm'ing his legal qso's. If you little qrm'ing fruits don't have the guts to join the qso then hit the road!

Hi, Daniel.

Try my upgraded Morse Code program, International Morse Code Processor
(IMCPW313.ZIP), at

http://www.simtel.net/pub/simtelnet/win3/ham/imcpw313.zip

Below are its major features:

IMCPW (International Morse Code Processor for Windows) v3.13 is a
Windows 3.1 & 95 compatible program which translates
program-generated/user-defined text and text files to Morse code.
Includes a window for copying code with the keyboard. Program recognizes
all characters including "Barred" characters. Prosigns not implemented
can be defined by the user. Characters and prosigns can be selected in
groups or in any combination. Code speed is adjustable from 3-50 wpm
with a character speed of 10-50 wpm for Farnsworth code. Includes a
comprehensive help facility, a main menu, four popup menus, and eleven
code practice lessons. It is Fully customizable from the Options menu. A
Sound card is not required. Requires 964K of free hard disk.

73,
Lindsay

HI there

i operate HF mars..3.3 mhz and 14mhz 3-5 days a week at pwr levels of
100-3000 watts depending on the band conditions an where i am trying to
reach..been doing this last 5 yrs and the only thing i interfere with is
my mother in laws portable radio that she bought in the early 60's
of course i got low pass filters and ferrite/torrid filters and all
kinds of other filters all over the pwr lines and coax of the computers
and radios but the only other prob i had was i interfered with
neighbours phone about 30 feet from the CB ant i put up for the wife,
went to radio shack and bought a rfi filter installed it on here
phone..NO MORE PROB

it can be done

Hello radio amateur freak

I have a Kenwood TS-570D HF tranceiver and like to use it in combination with a transverter for going SSB on 144MHz.

My home build transverter want an input signal of max. 100mW for transmitting but my TS-570D deliver min. 5000 mW (5W).

Do you know if it is possible to reduce the output signal of the TS-570D transceiver to 100mW - by push any buttons on startup or something like that?

What else can I do - 34 dB attenuation is quite a lot.

Yours faithfully

OZ2BKK /Bjarke

If you have questions or need assistance contact: k7on@qsl.net

---

bit bucket /n./

1. The universal data sink (originally, the mythical receptacle
used to catch bits when they fall off the end of a register
during a shift instruction). Discarded, lost, or destroyed data
is said to have `gone to the bit bucket'. On Unix, often used
for /dev/null. Sometimes amplified as `the Great Bit Bucket in
the Sky'.

2. The place where all lost mail and news messages eventually go.
The selection is performed according to Finagle's Law;
important mail is much more likely to end up in the bit bucket

than junk mail, which has an almost 100% probability of getting delivered. Routing to the bit bucket is automatically performed by mail-transfer agents, news systems, and the lower layers of the network.

3. The ideal location for all unwanted mail responses: "Flames about this article to the bit bucket." Such a request is guaranteed to overflow one's mailbox with flames.

4. Excuse for all mail that has not been sent. "I mailed you those figures last week; they must have landed in the bitbucket." Compare black hole.

This term is used purely in jest. It is based on the fanciful notion that bits are objects that are not destroyed but only misplaced. This appears to have been a mutation of an earlier term `bit box', about which the same legend was current; old-time hackers also report that trainees used to be told that when the CPU stored bits into memory it was actually pulling them `out of the bit box'. See also chad box.

Another variant of this legend has it that, as a consequence of the `parity preservation law', the number of 1 bits that go to the bit bucket must equal the number of 0 bits. Any imbalance results in bits filling up the bit bucket. A qualified computer technician can empty a full bit bucket as part of scheduled maintenance.

The regs state (and Curtis implied) that "normal means of communications"
should be exhausted first. All I did was to list some of those "normal
means." Take your complaint to the FCC if you don't like the way their
regs are stated.

Hi Curtis,
You used the same phrase ("...normal means of communications...") that
appears in Part 97. All I did was to list some of those "normal means."
Don't flame the messenger if you don't like the message.

73,
Jeff

Hi Andy,
What does race have to do with gay men meeting anonymously in public restrooms and performing anal and oral sex on each other? The original message mentioned nothing of race.

Jeff

Since this is comp.sys.ibm.pc.hardware.cd-rom

How about trading it from a CDROM drive?

5714. Radio Shack HTX-212/242 Problems

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-16 00:00:00 UTC
From: "Gary E. Euler" <downeast@ij.net>
Message-ID: <33A4FFC4.401D@ij.net>
Source record: 195627

Hello to all

Has anyone out there had any problems with their RS htx-212/242
mobile radios. We had a few with the PIN switching circuit burning
a hole through the circuit board. Also the final breaks into
oscillation on the HTX-212 in high power (45 watts). We also have found
the HTX-242 radios are having a problem with the CTCSS and DTMF not
having the right frequency and or low deviation. If you have seen these
problems with these two radios please e-mail me with the details of your
problems and what Tandy did to resolve the problem. A few of us have
been burned by Tandy with these products. I myself went through six (6)
radios starting with the HTX-212. I now have the HTX-242 and I still
have problems with the radio, the deviation is too low on the DTMF
output from the radio. There is no DTMF/CTCSS level control. All
signals go to a single deviation control (RV1) per the schematic.
Please e-mail me if you had problems. We need all the support we
can get on this matter since Tandy states that the radio has no known
problems. If you are going to purchase any of the amateur line from
Radio Shack, do yourself a favor and get the extended service (TSP).
Thank You
Gary

Subject: Anyone Still Using Windows 3.1?

Yes, I still use Windows 3.11 on both my machines at home and my one
computer at work. However, some brilliant person, who is no longer
employed with us, decided that we were going to Win 95 at the office.
It is on about half our machines and everyone hates it, even the folks
whoare proficient in it. What I find maddening about Win 95 is that it
is dumbed down. I mean, really, what in the hell is an icon that says
"MY Computer" supposed to mean?

From: Gina Weller <weller@ix.netcom.com>
Subject: Can an Active Ham really be RFI & TVI Free???

Touch lamps, TVs, telephones, CATV. You name it, it can be interfered
with.
While the majority of interference cases can be resolved by judicious
filtering,
use of shielded cabling, re-routing of wires, etc., some of the consumer
electronics out there is just "basket case." The only way to fix it is
to
replace it with something better.

When you reach that point, your dear neighbor will say, "the problem
isn't
there until YOU start transmitting, so it is your responsibility to fix
it."
Unless you've got deep pockets, you either agree to limit your
schedule/band/
power/mode, or take the hard-ass approach and tell the neighbor that the
problem is HIS, and you are not going to do anything more. How you
handle this
situation will determine whether you and your neighbor continue to have

some sort of friendly relationship, or the neighbor escalates his complaint
to his Congressman, makes a public nuisance complaint to the police, or
flattens your automobile tires in the middle of the night.

The FCC has the authority (see 47 USC 302) to require manufacturer's of
certain types of consumer electronic equipment to meet minimum interference
immunity specifications. The European Community and other countries require
this, but the FCC has generally deferred to industry to resolve problems
when they arise. Recently, the FCC has adopted some standards (see 47 CFR 15)
that promise SOME improvement in the interference immunity of TV sets, but
the exact impact is unclear.

Of course, as we transit toward DTV, with its new and unregulated set-top
DTV-to-NTSC converters, PC TVs, and other gadgets, who can say what sorts of
"new" interference problems will crop up. Already, the explosion in the use
of PCs and modems has increased the number of interference cases.

My advice is to do your best to fix the problem (ferrite is magic at HF!),
seeking the counsel of the friendly ARRL Technical Coordinator as needed,
then document the nature of the problem and everything you have tried to
fix it. Send this documentation to the EIA (Electronics Industries Association),
with a copy to the manufacturer and the FCC (Office of Engineering and Technology).
If EVERYONE did this, the FCC might actually do something, or, at least
there would be a record of the complaint.

I do not blame manufacturers for wanting to save a few dollars by not
increasing the interference immunity of their equipment. After all, probably
99.9% of the units sold are operated in an interference-free environment.
But the other 0.1%, representing perhaps tens of thousands of consumers,
deserve some attention.

One idea I've put forward is to require testing and labelling of consumer
electronics for EMI immunity. Yes, this adds to the unit cost, but only ONE
unit has to be tested, and, regardless of the test result, it could still be
sold. The testing and labelling could even be optional. I believe that

manufacturers would seize the opportunity to "one-up" the competition, by
demonstrating that their equipment is "better" in some measureable way.
There would probably be side benefits, like better immunity to ESD (lightning
strikes). My only desire is to have the immunity test results made a part of
the consumer documentation (instruction manual, or a sticker on the back),
so that consumers can make informed choices.

The test results might look something like this:

"Class I" could be immune to interference at a level of 10 V/m. Class IA,
could be immune at 3 V/m. Class IB at 1 V/m. Class II at less than 1 V/m.
Class III not tested.

My $0.02.

73,

Bob Weller

Subject: Help with AEA LogWindows v. 3.0

After receiving my vanity call sign, I tried to enter the new call into
the logbook of AEA LogWindows v. 3.0. No way to change the callsign. I
even deleted every trace of LogWindowes from my hard drive and
re-installed it, entering my new call. Old call still comes up when I
use LogWindows. I have prowled around in all the .ini and .dat files,
changing from old to new call sign wherever I found the old call sign.
Still no luck. When I run LogWindows and click on Logging, it shows my
old call sign and it prints my old call on the log sheets. Surely
someone else out there has encountered the same thing. What to do?

The no-coders offer no reason to think that hams are supposed
to operate in a vacuum, either, until their own evidence gets kicked

back at them.

QUOTE
the us coast guard stopped using code.
UNQUOTE.

This is offered as a reason to drop code.

QUOTE
A ship in distress uses code to seek aid.
UNQUOTE

This is NOT acceptable as a reason not to drop code, because
the ship wasn't crewed by hams.

I am reminded of general short-pants of Pearl Harbor fame, who,
upon bveing warneed to be alert for hostility, violated many, many
available tenets of warfare and clumped his aircraft in the middle
of Hickam field instead of dispersing it like he should.have done.

One of his aides testified that the general was reminded by a
subordinate about dispersal, and the general defended his action
by mentioning the entire Hawaiian Japanese population of about
a hundred thousand men, women, and children, as reason they
couldn't guard all those planes if they were dispersed.

When reminded of the possibility of shellfire of bombing, the general
Pooh-Pooh-ed all that with fine disdain. The japs, he said, couldn't
get within bombing range of Hawaii.

Now, we gotta getr rid of code because some other short-brains say
we must.

What a marvelous world.

>6 meter transceiver.
>
>Thanks
>Ken
>l1402@erinet.com

I dont not have the actual manual, but I can draw the achematic for you from nemory. Lets see -- it used a 6EA8 Rcvr RF amp and mixer; another 6U8/6EA8 as its local oscillator/1750 KHz IF amp; a 6AW8 or 6CX8 as transmit oscillator/multiplier and 6 watt in final amplifier. Audio was a 12AX7 twin triode -- 1/2 used in receive and both sections in transmit and the audio output was a 6AQ5 that doubled as a modulator tube -- choke coupled to the plate/screen of the pentode section of the 6CX8. The early HE-35's also had a 6AL5 as detector/ANL -- that became a pair of silicon diodes in the final run of the "B" series.

The transmit tune-up indicator was a neon lamp viewable through a juled opening in the front panel.

If you have an HE-35 with a "tuning eye" tube added to it -- the chances are that either I or Larry Levy WA2INM did it.

If your HE-35 uses standard 8 MHz crystals instead of the overtone type, then it was modded according to an article written for 73 by Levy and I in -- oh -- 1961 or there-abouts. Once converted, they used the pentode section of the 6AW8/6CX8 as a final amp and doubler -- only put out only 1 watt -- but used crystals that in those days could be bought for less than a dollar each.

A few HE-35's will have an added chassis -- screwed to the front panel -- with a 6AK5 tube and additional circuitry on it. This was another -- more elaborite transmitter mod that also permitted use of cheepo 8 MHz crystals, but also retained the final amplifier section of the 6AW8/6CX8 as a straight-thru amplifier -- with 3 watts out.

The HE-35 was manufactured for Lafayette Radio by the DeWald Radio Company -- Communications Products Division in Garden Cirt NY (Queens). De Wald also marketed its own version of the radio by mail order. The only change was the generic DeWald had a different color front panel and a different paint job.

No two product runs were really alike as a lot of what appeared to be military surplus parts were used. Often a 270K ohm resistor in one run

became a 220K in the next run, etc. As such, parts values on the schematics were only a guide to what should have been used -- not necessarilly what was really there.

Complicating the evolution of the HE-35 series were the many mods that the fore mentioned WA2INM and I developed. Lafayette Radio was quick to send their dis-satisfied customers our way to have an HE-35 "customized" with the store paying us. Not bad for a couple of late teen hams with a lot of time on our hands -- a big basement workshop -- and a red-glowing tipped WEN soldering gun. As such, I doubt that a "stock" HE-35 exists. If you have one -- hang onto it!

A real find is the add-on 12 volt DC power supply that could be mounted on the back of the HE-35 using four tiny self-tapping metal screws. It weighed more than the radio and used a rather unique "syncronopus vibrator" to convert 12 VDC to 240 VDC -- without using a rectifier tube or rectifier diodes. Lafayette sold less than a dozen of them -- so they are really rare devices.

Hope this information helps. I the very first HE-35 sold; had lots of fun in the early 60's making HE-35 -- and later -- HE-45 series Lafayette transceivers operate. Those were fun days -- and I still have a working HE-45B -- circa 1962 or 1963 -- here in the shack!. (Along with an Allied -Knight TR-106 and Clegg Labs '99er -- and my prize -- an origional Ed Ladd designed Wippany Labs "Lil LuLu.")

5730. Re: What is CW & RTTY?

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-16 00:00:00 UTC
From: ke4zv@bellsouth.net
Message-ID: <33a531ec.241178@news.atl.bellsouth.net>
Source record: 195664

On 14 Jun 97 16:56:30 GMT, Buddy (31) wrote:
>what is CW and/or RTTY code?

Buddy, hams use the term CW, which is really a carrier generation technique, to mean on-off keyed International Code text transmission. These are the familiar beeping noises you hear on the lower ends of amateur HF bands. RTTY is an acronym for Radio TeleTYpe. It uses FSK modulation of a CW carrier to transmit text in either the Baudot or ASCII code. These are the tweedle noises you hear just below the voice portions of the amateur HF bands.

>Is it similar to morse code?

The International Code is similar to Morse Code. The real Morse Code (also called American Morse) was used on US telegraph lines. The International Code derives from the Continental Code which was used in Europe for telegraphy. This is the Code used over radio.

The two codes commonly used for RTTY are Baudot (which should actually be called Murray) and ASCII. Murray code is a 5 unit code developed for use with mechanical teleprinters. ASCII is the ordinary 7 unit code used with computers.

>how do you decode it?

International Code is generally decoded by ear, IE you condition your brain to behave as a crude modem. RTTY uses an actual machine modem called a TU which stands for Terminal Unit.

>how do you transmit/receive it?

The International code can be generated by a hand key or by an electronic key or by keyboard.
RTTY is sent by keyboard, or from tape or disk. The transmitter for International Code is amplitude
modulated in a fashion called OOK (On Off Keying) by the keying pulses. The RTTY transmitter is
FM modulated in a fashion called FSK (Frequency Shift Keying) by the keying pulses from the TU.

The normal way to receive either is to hetrodyne the signal down to audio frequency with a product detector equipped receiver. The International Code is then decoded by ear while RTTY is decoded by the TU and the associated display device (printer, terminal, computer, etc).

>do you need to know it for any class FCC Licence?

You need to be able to receive the International Code by ear at a speed of 0 WPM, 5 WPM, 13, WPM, or 20 WPM depending on the class of amateur license you're trying to get. The Tech license requires no demonstration of Code speed. The

Tech Plus (and Novice) require 5 WPM. General and Advanced require 13 WPM.
And Extra requires 20 WPM. Note that the bulk of the privileges you gain for passing faster code tests are not related to code use, IE they are primarily voice and data privileges. I know this makes no sense, but it is the way it currently works.

You do not need to demonstrate knowledge of RTTY codes for any license class, though you will be asked questions about FSK modulation technique on the written exam.

Supermorse is indeed a good way to learn the code. Use Koch drill methods
with Supermorse for most rapid speed improvement. This works similarly to
typing drill in that it conditions an automatic response to each character sound.
To achieve Morse speed, you must *not* think, you simply must let the body do.
Failure to do so will strand you on the dreaded "hump" or speed plateau that
hits most people who try to think while copying.

The problem with tapes is that you'll quickly memorize them. So you need to
make new tapes often or they lose their conditioning effectiveness. You probably
don't want to use the same tape more than 4 or 5 times before you erase it and
make another. You can do that with Supermorse and a cassette recorder. But
working directly with the program is preferred.

>Do nor worry if some say morse is on the way out, it gets through
>poor conditions if all else fails and will stay therefore.

This is Morse Myth(tm). There are a number of digital techniques which work
when Morse cannot even be detected by ear in the noise, and which routinely
exceed the most gifted Morse operator in terms of speed and accuracy. Most
people need an Eb/No of about 13 db to copy OOK Morse at a useful speed while
machine techniques can operate down to about 4 db Eb/No while retaining useful
speed. (Note for several machine digital techniques, Eb/No is *not* equal to CNR,
it can be better, sometimes a lot better, due to various coding gains. For OOK Morse
they are always equal, and that can be a severe handicap for OOK Morse.)

Morse can sometimes be made to work under conditions where SSB voice fails
(SSB voice isn't a very robust technique), but that is very dependent on individual
operator physiology, level of conditioning, and the particulars of the channel impairment.
Few amateur operators are really gifted with respect to Morse operation.

Against Gaussian noise, Morse typically beats SSB in inverse ratio to their occupied
bandwidths (given equal operator skill). But against some forms of interference, the
cocktail party effect can allow skilled SSB operators to function on highly impaired

channels too, and usually at a higher information rate. The cocktail party effect can be considered a form of matched filter. This, like Morse talent, is a highly individual trait. Some people are very good at it, others aren't. Machine digital methods which are adaptive to channel conditions can easily beat either of the manual methods, and do so consistently from unit to unit and day after day.

Despite all that, you still have to be able to receive Morse at a test session (with a clean unimpaired signal in a known format) in order to get a higher class amateur license. Supermorse in conjunction with Koch drill can get you there, if you can condition yourself not to think. This is the hardest part of conditioning yourself to be a Morse modem. If you think, you lose. You've got to learn to just sit back and let the body do. Copy has to be a reflex. If you think about it, your conscious mind will bollux up the reflex, and you'll miss characters.

(It's like catching a ball. If you consciously try to calculate the trajectory, plot an intercept,
and consciously command the muscles, the ball will hit you in the head every time. You've just got to let the body do. Properly conditioned reflexes are much faster than conscious calculation.)

The only way to develop the body's reflexes is through drill. The duller and more mindless the drill, the better it will work. That's because the conscious mind will disassociate itself from the process, and get out of the way of the reflex actions you're trying to develop. Put up a sign which reads DON'T THINK! in your practice area to remind you that being a Morse modem is a mindless act. Eventually, you should be able to think about *something else* while the body mindlessly copies the code. That's the desired end result.

Remember too what my old friend, who was a landline telegrapher for 45 years, used to repeat to me over and over, "It isn't copy until it is on the paper." Just having the code
rattle around in your head isn't copy. He could copy at 45-50 WPM while carrying on an unrelated conversation with you. Then he'd roll the paper up out of the typewriter and see what had been sent. That's what you want to be able to do if you really want to be able to copy Morse. (Of course you don't have to get that good if you just want to pass the test then throw away the key.)

I've had no luck tracking down a service manual for my WJ 8617A-4 rx
here in England so I'm having to spread my wings wider.
I'd like to beg, borrow or steal the above at a fair price.
My set has a fault and I'm blind without a book.

Please help.

Direct e-mail preferred: phil@two-way.demon.co.uk

I've just uploaded a photo of Yaesu's new pager-sized dual-band "micro-HT". That's right, the size of pager... 1/2 watt on internal battery or 1 watt with external supplied power. Yaesu was showing this radio at the SeaPac Ham Radio Convention and ARRL NW Div. Convention at Seaside, Oregon on 6/14 and 6/15. The radio is said to go on sale on July 1st.

Ham Radio Online is a free online web "magazine" about ham radio. No ads. Its run by volunteers. We have nothing to sell. Come enjoy our web site at http://hamradio-online.com

5743. Burts message??? I think not.

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-16 00:00:00 UTC
From: acorbin@roanoke.infi.net
Message-ID: <5o40b0$kt3$1@nw003.infi.net>
Source record: 195677

The message from Burt Fisher "I am Gay" is obviously a fake and Burt didn't write it.

While I get annoyed with Burt's constant droning about "hams are boring" which I myself find boring there is another element here that disturbs me.

And that is the racist connotations of the original message.

I cannot abide by racism in any way, shape, form or manner. Whether it is White vs Black, Black vs White, Oriental, Hispanic, or whatever. Messages such as that have no place in the Amateur community. Whether you like Burt or not, messages such as that hurt ALL of us.

When we bring arguments before the FCC why some huge corporation shouldn't get our frequencies for commercial purposes, they don't have to dig deep to find irresponsible conduct to justify their actions. Look at 75 meters, 20 meters,....and then to post a message like that in a public forum, just reinforces justification to damage our hobby even more.

When I deal with Burt, as I have in the past, I do so on an intelligent and intellectual level. While his messages for the most part are "boring", we should condemn those who misrepresent the majority of us with fake messages such as "I am Gay".

Jeff, you can't be serious! In a life-threatening emergency, you grab whatever you have available and use it to secure help. If you have several radios, you first try that which you deem to have the greatest likelihood of a successful contact. If that's a ham radio and a frequency that you're not licensed on, so be it! I would hate to think you would waste valuable time in an emergency, trying to determine whether or not you were licensed for the frequency you were contemplating using!

I have never figured out what the hell this "O'l hams wont talk to me"
is. I havnt one time had a ham old or young refuse QSO with me. As for
these tight little groups try going to a new job or school same thing.
Its human nature. Guess what, hang around long enough and you get to
belong also....I generally find the older hams (W#, K# ETC) are among
the most friendly people I've ever met! Just show a little respect and
listen you to will be an OM some day...73

Radio & Electronics RT
Category 6, Topic 34
Message 13 Sat Dec 08, 1990
MURREY [Brian KB9BVN] at 20:12 EST

Here's what I have on the ICOM mod for the 22S
==============================================

Icom IC22S.MOD Packet Modification

The Icom IC22S is a ten watt diode matrix PLL synthesized 2 meter rig
manufactured in the early 1970's. In it's stock condition it tunes 146-148
MHz in 15 KHz steps. Since I am sure there are a few of these sitting on
shelves collecting dust due to the limited tuning range, why not modify them
```

for the perfect packet rig.

First replace the 7.68 MHz Oscillator/Divider crystal (X1) with a 5.12 MHz crystal. This will move the band to 145.00- 146.94 MHz in 10 KHz increments. The repeater offset will now be 400 KHz which should not pose a problem in simplex packet operation. I will give the diode matrix settings for the most commonly used packet frequencies. You can formulate others as needed using the formula N=100*(f-145)+61 and the manual. The diode positions indicated ARE WHERE DIODES ARE PRESENT. The other positions are left empty.

145.01= D5,D4,D3,D2,D1
145.03= D6
145.05= D6,D1
145.07= D6,D2
145.09= D6,D2,D1

Bjarke wrote:
> What else can I do - 34 dB attenuation is quite a lot.

Hi Bjarke, you can build an attenuator. My ARRL Handbook has 50 ohm pi and 'T' attenuators ranging from 1 to 60dB. Also, your dB calculation seems to be for voltage yet you gave the requirements in watts. 10*log 5000/100 gives me 17dB. For 5w in and 0.1w out, the two parallel resistors in a pi attenuator should be 66.4 ohms and the series one should be 173.4 ohms, non-inductive. The first parallel one needs to have a 5w rating. Five 330 ohm 2w carbon resistors should do the trick.

Try some round torriods around the line running between the vcr and the
television. Most rfi sees a length of wire as an antenna and the signal
will enter at that point. Some times it can come in through the ac line
as well. A solid ground for the rig ,amp,and tuner is a must. A good low
pass filter will help also. You can usually get torroids at a hamfest
for a buck. If one does'nt do it try 2. Hope this helps. Jim

FYI I think You got some problem with Your s/w. I recieved this:

Ham radio is broken
Ham radio is broken, and nobody wants to fix it.
The old hams are to busy making their scheds, and talking to
thier clich of friends, to be bothered with fixing it, even
if there are only a few of them left, that know how.
The new hams don't know how to fix it, and are to busy buying
gear & the all important computer , to even try to fix it.
The medium age hams are to busy with the day to day work of
raising families & chasing all the DX there is to be found.
So, ham radio stays broken, and begins to decay, soon it will
be to far gone to repair, even if all the hams together try.

In another rage of ignorance CrACKeD wrote:

> Burt's no idiot, and he's got the education and publications behind
> him to prove it.

Prove what? Just what exactly is Burt saying thats so monumental?

Hmmm, find a newsgroup and then tell everyone on it they are a bunch of
loosers and make untrue generalizations about them as a group.
Wow, that is brilliant. Yes, I see now, Burt truly is an educated man.

Burt is a stone thrower, just a name caller, nothing more. What about
him appeals so much to you? You say he speaks the truth, there are alot
of things that are true but out of respect they are better left unsaid.
Burt is disrespectful of the newsgroups he posts to plain and simple.

I could find any newsgroup, religion, culture, hobby, go call them names
and tell them how wrong they all are and how right I am. Mabye I could
go to the jewish newsgroup and tell them they have big noses, boy
wouldn't that be great fun! Oh but It's true right CrACKeD? Jewish
people in general have distiguishable traits such as a larger nose. So
as long as I'm speaking the truth that will be O.K huh?

And yes, posting without at least a return address is very ChICKen ShIT.

> Point 2. The code requirement: Whether it is reduced, kept the same, or raised (wouldn't it be great if it were raised to, say 30 wpm for the top license) makes no difference to me. If I decide that I want to upgrade, I will do so. But, the more that I listen to the putdowns of the "NO CODE Tech", the less I have a desire to extend my involvement to includ e those who do so.
> Point 3. If all the bickering in this newsgroup is indicative of the mindset of the ham radio community, then I really don't have a need to become more involved. So, adios newsgroup..... life is too short to spend my time reading other's fights.
>
> KC7NKD

Then why not get involved with an emergency communications group in your area and
quit wasting time here. This hobby is what YOU make it, not someone else. Seek and find others with the same interests, they ARE out there.
I noticed your post didn't say "I'd like to meet others involved in emergency communications".

If you believe that this cheesy newsgroup is indicative of the state of ham radio then don't let the door hit you in the ass, you wont find what your looking for here.

I was bored and decided to try and come up with the most confusing,
awkward phonetic alphabet possible. Use this on the air and you'll be
sure to trip some people up.

A - are
B - break
C - cue
D - Djibouti
E - eye
F - fu@k (cannot say on the air - make an F sound and then produce a DTMF
or other censoring tone)
G - gnome
H - hors d'oeuvre
I - in
J - Jose
K - know
L - Llama (pronounced 'Yama' as in Spanish)
M - mnemonic
N - naught
O - Oedipus
P - phlebotomy
Q - Qatar
R - repeat?
S - sea
T - three
U - umlaut
V - vie
W - Wagner (pronounced like the German composer)
X - Xena, warrior princess
Z - zero

73, de are cue 6 Xena, warrior princess are
AC6XA

> The rules are pretty clear on this. I still have a hard time believing
> that no one can read this. Read the sections... word for word. 97.403
> and 97.405(a) and (b). Both sections (three paragraphs) start with the
> SAME nine words, "No provision of these rules prevents the use by..."
> If the rules explicitly do not prevent under the "exceptional
> circustances described" then such action would be lawful. (The phrase
> "exceptional circumstances" is used in 97.405)

I understand you, but I don't agree with that at all, Curtis. Let me take this in as logical a sequence as possible so that you can jump in at the points where you and I part company.

Somewhere there are laws which achieve two things: 1) they give the Federal Government, through the FCC, sole authority to the exclusion of all State and Local authorities to regulate wireless transmissions within the USA's territories and 2) they proscribe the use of all wireless transmitting equipment except as authorized by the FCC. I'm not a lawyer and I'd have a tough time locating where and how those laws are written, but to deny that they exist seems unrealistic.

Part 97 is a set of rules which give certain limited permissions to holders of Amateur Radio Licenses. Part 97 does not forbid the use of the Air Bands or the broadcast bands. It does not prohibit jamming the Sheriff's repeater or the McDonald's order channel. Indeed if those prohibitions existed only in Part 97 of the Commission's Rules, then only licensed amateurs, and not their unlicensed neighbors, would be be forbidden from those activities.

Part 97 does no more than give amateur license holder permission to use authorized frequency bands for authorized transmissions, and it goes on to define what is authorized. The only meaning that I can attach to 97.403 and 97.405 is that those sub-sections will, in the case of emergencies, tend to cancel whatever is prohibited elsewhere in Part 97, such as those activities that are set out section 97.113.

So I believe that these sub-sections will, in circumstances of emergencies and where other means are not available, allow the automatic retransmission of signals from other amateurs or coded communications or transmissions for reward, for example. But they will not allow transmissions outside the authorized frequency bands because those activities are not prevented even partly, let alone solely, by anything in Part 97.

As I said, I don't know which are the laws that make it illegal to to transmit through the Sheriff's repeater or make any other unlicensed use of radio transmitting equipment, but they certainly exist, they are not in Part 97 and they are not abated for licensed amateurs, even in dire emergencies, by anything written elsewhere in Part 97.

: compromise. I could have gotten the same level of performance (perhaps a
: bit better) with a handful of Hamsticks, and saved some money.

Gee Gary, I finally get to disagree with you on something. I think the
COMET is a big improvement over my pile of hamsticks. Although it is
really pricy, the Comet makes up for it in that just screwing it
together gave flat SWR right smack in the middle of each band. I own
an FT-900at so the limited bandwidth of the Comet (or the hamsticks for
that matter) isn't an issue. It's quite nice not having to stop the car
to swap hamsticks and (sorry about this, but) I wouldn't be caught dead
with one of those butt-ugly top-hats or screw-driver behemoths on my
sporty little car... maybe a pick-up...

5775. HELP: KAM (FSK) to Kenwood TS-450S

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-17 00:00:00 UTC
From: gtk@mis.haselow.com
Message-ID: <gtk-1706971001160001@gkopp.haselow.com>

I am trying to get my KAM all mode to do FSK on my Kenwood TS-450S. I wired the plug as directed to the back of the radio (the big 13 pin plug), but I have no luck getting FSK to work. PLUS, when the plug is in the radio, SSB goes to crap. There is so much garbage on my signal, you can't make out any voice, even though kenwood claims that the two are isolated.

Any help you can be in getting these two devices connected would be appreciated.

Hi Gary,

Thsi may be all correct in theory, but in real life we are not there yet.
It is surely not for nostalgic reasons that morse is preferred under
difficult conditions like EME, aurora, meteor scatter and rain scatter.

A DSP decoder will run into serious problems if the signal is not
just simply buried under noise but distorted by multipathing or doppler
shift.

The second problem is, that most amateur radio contacts are relatively
short, and having a decoder detect the signal, syncronize with
the other station and agree upon protocol would be much more tedious
than simple "human" signal processing.

>
>Yours faithfully

One trick that mostly works on Kenwoods, is to use the ALC jack
with a 9 volt battery and 5K pot to lessen the output. The only
possible problem with this approach is that the first couple of seconds,
there may be overshoot of the output power. On my TS-50, there
doesn't seem to be any, but on my friend's, the output power goes
up for a brief burst of power. Also, if you look for mods, I believe
that there is one detailing how to turn down the 570D that I
didn't pay any attention to because I don't own one. If you can live
with reduced 5 watt output permanently, that's probably the safest
option. It's also what I have done. I no longer have 10 watts as the
low power output on my TS-50, it's 120 milliwatts. I however don't
know where the proper pots are for the TS-570D are located, but
I'm sure someone does.

5780. ICOM775DSP/Ameriton AL811H(elp!!)

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-17 00:00:00 UTC
From: N7SG - K7FD <dx@netbridge.net>
Message-ID: <33A6C23B.75B4@netbridge.net>
Source record: 195554

Help!

How 'bout some advice on my 775/811 setup? I am concerned that
my meter readings don't 'follow the book' exactly.

I am driving the AL811H with 65 watts (lowered power output on 775).
I have the Icom going into the amp, then the amp goes into a 2KW
tuner...then into the quad. The antenna is under 2:1 across
twenty meters; with the tuner, 1:1 on any specific frequency.
So far so good...

The problem is with the built in SWR meter on the ICOM transceiver.
When I tune the amp for max power out (using Ameritrons parameters
of approx 650ma Ip and 130ma grid current, the swr between the rig
and amp is over 3:1. In other words, the amp doesn't look like a
50 ohm load to the Icom.

If I give the amp more LOAD, then the SWR goes to 1:1 between the
rig and the amp. But the grid current drops to 65ma, instead of
the suggested 125 - 150ma...

The ICOM does not appear to kick back on output power when it
is looking at 3:1, but the fan does kick in...so it doesn't
really like it. Should I tune the amp with the LOAD control
higher to bring the swr down? Has anyone else run up against
this? During all this, I have left the internal ICOM tuner OFF.

THanks for any input...

It means that if you double click it, you get a user interface that looks like
Win 3.11. Kind of stupid, but then I guess that they figure their old Win 3.11
users are stupid and can't adapt to a different user interface.

I am active in what we call SKYWARN here in Texas. I don't know how wide spread it is but in a nutshell it is a group of Amateur operators who watch the sky during severe weather. I have been told by FCC representatives as well as private attorneys that during a BONIFIED emergency there are NO PROHIBITED communications other than willfully interfering with the communications of another licensed station or broadcasting false reports. So it would be legal for a person to transmit out of his normal privilege area so long as that was the only means available. So a Tech class Amateur radio operator could use HF phone during an emergency if his 2-meter rig was out and there were no properly licensed amateurs available.

greetings all,

I'm finally heading down to take my Tech exam after years of putting it off and would like to know what a good deal would be for a used 2-meter handheld, preferably with DTMF. I don't mind older stuff that might not be quite as small as what's out there today, and unless the Austin ARC's repeater requires CTCSS I don't need it. If it can do 70-cm that's even better but I'm mainly after 2m.

If you're in Central Texas and have an old clunker, and want to upgrade to something more fancy, let me know so I can get in touch with you and talk price, shipping, etc. ;-)

I suggest that you switch the Icom's auto tuner on, adjust the
amplifier exactly as Ameritron recommends and just ignore the input
mismatch.

We already had this discussion in great detail. Didn't GET the ham
license for this reason...but after hearing what a useless wasteland the
great majority of amateur radio is, I decided to KEEP the license for
these reasons, as opposed to turning it back in to the FCC.

So are you the only one bored with this type of thing? If not, where
are your friends who want to talk about something else? What's to
keep you from putting up your own machine and talking about whatever
you wish? Don't tell me it can't be done. I've done it (with the
help of some good friends) several times.

Years ago with AB1 amps and 100W exciters we used swamping networks.
Use a chassis box putting Coax connectors on each side and a large
group of resistors to cut the power. We went from 100W to less than 1
watt (reduction of 100). Description was in the W6SAI ands RSGB
handbooks.

I just passed my 5 wpm minute test and am now a Tech+. I attended a six week code class that a couple of hams here in the Dayton area taught. In fact one of them Don, N6JRL, has an article in QST on building a CW oscillator for MCW. It appears on page 53, of the July '97 issue.

Having participated in the class really helped. Another thing I did was to save interesting Newsgroup and e-mail as straight text files and then loaded them into Numorse as practice. By doing it this way you have something new to listen to and are not so apt to memorize the message.

As soon as I can get my hands on an affordable HF rig I will be burning up the Tech+ bands. I have been told that the best way to pick up speed is to get on the air and practice, practice, practice. :)

Do not waste your time with ham radio, there is no more magic.

Read the following:
What Burt preaches is really true. I usually only operate digital
modes,
but when I listened to some VHF and UHF repeater activity today, what
Burt
has been telling us all along really makes sense. When I got into this
hobby some 4+ years ago, I operated phone most of the time. Typical
contacts were spent talking about how to position oneself correctly to
hit
the local machine, or how close one needs to speak into their
microphone.
Occasionally things got exciting and people talked about the bad hum in
their radio, or even about the weather. What happened when I turned my
radio back on today and listened to the same people I used to chat with
years ago?

"Hey, I'm closer to the mic, how's it sound now?"
"Let me see. Maybe if I stand up you'll hear me better."
"Yeah, some WD-40 on that tractor should fix the squeaking noise."
"Hi hi"
"How's the wife?"

Along with this redundant nonsense, the same people who had gotten their

licenses years ago STILL had no idea how to use their radios. Failed
autopatch after failed autopatch, callsigns getting mixed up, and piss
poor operating in general. Not to mention all the weird codes that must

have come from some war movie (roger, out, kick it back, etc.). Even
the
people who I considered hard core operators years back are doing nothing

but testing their microphones (probably the same ones they had years
ago)
and talking about how strong their signals are, STILL. Any contact not
containing one or more of the phrases above was just a boring discussion

about how somebody got started out in ham radio, what type of "rig" they

have, how "mic shy" they are or were, etc. Even repeaters linked up
between different states are the most boring thing to force oneself to
listen to. Nothing but old men talking about their various retirement
activities. Sad, really. I'd better stick with digital and satellite
operating.

5808. ADI AT-600 Problem.

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-17 00:00:00 UTC
From: jkane@earth.execpc.com
Message-ID: <5o690nfdb1@earth.execpc.com>
Source record: 195582

I purchased an ADI AT-600 last week. It is my first radio. I have a problem with it accessing the repeater locally. After the help of some great operators in the club that takes care of them, it was determined to be a PL problem. I took it back to have it tested. They said the PL was off a little and would have to be sent to the factory to be readjusted.

Has anybody else had this problem with these? I am concerned about that I bought a product that may be prone to this problem. They took another off the shelf, and it also was off by the same amount.

TIA.

I'm a ham operator, and I use relatively high power levels (>1500 watts) on many different frequencies. My television set is not being interfered with, only when my wife wants to watch a video tape does my hobby begin to cause problems. No neighbors complain, so the problem is extremely local. The VCR is a Fisher, and I've been to thier website looking for an e-mail address to write to a technician, but there are none published. I know that many electronic manufacturers try to get by with the least amount of parts, but have available modification kits just for my problem. Any idea how to get 'hold of a Fisher factory tech on the internet? Anybody ever have this problem and fix it? Thanks -Web

> kr4wm@sccoast.net

I had that problem on 40 meters only. I found that with the antenna
disconnected from the VCR the problem went away. As soon as I connected
the shield of the antenna to the VCR, the problem came back. I ended up
coiling about 20 turns of the VCR antenna cable (RG59) to make a choke
about 10 inches in diameter. This fixed the problem.

I suggest you first determine how the RF is getting into the VCR
(antenna, power leads, or direct through the VCR case). Stop the RF from
entering the VCR with chokes and/or shielding.

It seems that I heard of a way of using a 9 volt battery and pot to put a negative voltage on a pin on the back of a Kenwood 140 to reduce the voltage all the way down to zero, to use a tranverter. I'll look for the notes on it. 73 Mark

He fixed his newsreader, didn't he? That's a start! :-)

Matthew, the problem is that Amateurs alone are not entirely
responsible for the current state of affairs. The FCC, the
money-grubbing politicians in Congress, the little LEOs, computers,
the Internet, sattelite TV, and any number of hundreds of potential
interactive sources are responsible together. Most of us feel
powerless to undue what so many have done to our hobby.

That is why it is probably wiser to dig in and enjoy it while you can!

OK, I could name a few brands that can't sustain full rated load for more
than a
few minutes, but with reputable manufacturers you can pretty much believe
the
nameplate ratings, BUT NOT BEYOND (like running with an infinite DC supply
at full rated load).

Silent Key

It's with regret that we begin this week's broadcast with news of two Silent Keys.
Graeme Wiley VK2EBU and Janette Wiley VK2EJW were killed in an horrific motor
vehicle accident outside Glen Innes on Saturday 7th June.
Their funerals were held at Glen Innes Anglican church on Wednesday 11th June.
Members of the "Land of the Beardless Net" were represented there.
Please pause with us now in memory of Graeme and Janette Wiley.
Vale, Graeme Wiley VK2EBU and Janette Wiley VK2EJW.

Divisional News

New Members

A warm welcome is extended to the following new members approved at the
Council Meeting on Friday night 13 June 1997.

VK2DCA Albert ANDERSON of Kirrawee
VK2EMQ John Peter MOODY of Ettalong Beach
VK2XRA Adam ROBERTSON of Orange
VK2AJF Joseph FREEDMAN of Merewether
VK2DSO Don Porter WOOD of Carlingford
VK2JRL Robert Leslie TORV of Wood Park
VK2EZD David DOWNIE of Albion Park Rail
VK2AYC John Edward COLLITON of Sandringham
VK2BVR Valentine ROCHFORT of Oxley Park
VK2ARA Edward THRIFT of Unanderra
VK2BZA Peter HILL of Lake Kathie
VK2FED Shane NORMAN of Blue Haven
VK2LK Barry Thomas Turner of Westmead

Associate Member

VJ2R Robert John BARNES of Bexley

We hope you will have a long and happy association with the WIA. (These new members go into the next monthly draw for a Fluke 12B digital multimeter)

--Eric Fossey VK2EFY, Divisional Secretary

A message from the Affiliated Clubs Officer

Whilst in Wagga Wagga and Griffith this week I will be having informal meetings with WIA members who live in these areas.

On Thursday 19 June I will be having an informal meeting with the MIA WIA members at the QTH of John Lacey VK2KKZ 6 Langley Crescent Griffith at 7:30pm.

On Friday 20 June I will be having an informal meeting with the Wagga WIA members at the 6th Wagga Scout Hall in Mathoura Avenue at 7:30pm. I have been told the that anyone not familar with the Wagga area such as me will be talked in on Channel 3.

-- Ken Westerman VK2AGW Dunedoo VK2 division Affiliated Clubs Officer and Councillor responsible for Western and Riverina Areas of NSW

Dural Commitee Meeting

A reminder to the Dural Technical Committee that a meeting will be held at VK2WI next Sunday. It will comence about 11:15 or at the conclusion of the morning callbacks. Most team members should have received notification recently in the mail. Visitors welcomed

WICEN News

The mid-year period is one of WICEN's "silly seasons", with an event on almost every weekend (the other is the Christmas and New Year time, when the Four Elementals, Earth Air Fire and Water, all tend to do their thing). Help, even from non-WICEN members, would be appreciated, and this is a good way to put something back into Amateur Radio, and to help the community at the same time. Next Sunday, the Hunter region will be providing safety communications for the "Lake Macquarie Australian Half Marathon" championships, and the event co-ordinator will be Peter VK2YGM.

Over the weekend of 28th and 29th of June is the Wilderness Rescue Nav Shield, run by Alan VK2YYJ, on telephone 015-097-217, packet radio as VK2YYJ at VK2TGB, or at work on (02) 9839-1388.

On the same weekend, the 28th to 29th, is the St Alban Horse Enduro. Around six operators are required, from 4am to 2pm, with some checkpoints requiring 4WD access. Please contact Andy VK2XRX if you can assist.

On the weekend of 12th-13 July is the Colo Classic Endurance Ride, and Blue Mountains WICEN has been asked to provide communications support. This horse endurance ride is a 24 hour event, starting at midnight on Friday 11th July, with an expected participation of 80 riders and their horses. Thirteen operators are needed to cover the checkpoints, with each checkpoint open for between 5 and 8 hours, and one operator with a 4WD vehicle would be appreciated. Why not make it a family weekend as there is an excellent camping area where the base station will be located next to the beautiful Colo River. A meal will be provided from the BBQ at

the base when operators complete their checkpoint. For further information please contact Neil Fallshaw VK2XNF, at home on (047) 51-6449, at work on (02) 9342-1589, via packet radio as VK2XNF @ VK2TGB, or e-mail to neil_fallshaw@yes.optus.com.au.

The Central Coast AGM will be held on 25th July, at the Central Coast Rescue Squad Base, Rose St, Wyong, starting at 8pm.

The Hunter region will be providing safety communications for the "CanTeen Annual Troy Newman Cycle Trek" from Sydney to Newcastle on 27th July; the event co-ordinator is Pauline VK2GTB. If there are any ardent cyclists among the listeners who would like to join the trek and help raise funds for CanTeen then please contact Pamela Gee on (049) 26-2555 for more information.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

DX News

MONACO - I1YRL/3A and IK1OWC/3A are active on CW this weekend.

NEPAL - 9N1RHM has been active on 20 meters.

UNITED ARAB EMIRATES - A61AO is a newly licensed operator.

SABLE ISLAND - CY0SAB will be active until June 23, on 80 to 10 meters, and may also be found on 50.132 and 144.200 MHz.. He expects to operate during his off hours.

IRAN - EP2MKP is active using CW, and can be found on 40 meters from 2000 to 2100z.

NEW CALEDONIA - FK/F5PXQ will be active from here for the next three to four years. Activity will include RTTY.

SWITZERLAND - HB6FG will be active during contests for the rest of 1997 in celebration of 60 years of the Fribourg section of the Switzerland Radio Association, USKA. Special QSL via the bureau.

FRANZ JOSEF LAND - R1FJV is active from here until the end of 1997.

EGYPT - SU1DZ is active from Cairo, operating on 6 meters.

DODECANESE - I3BQC, will be active, possibly as SV5/I3BQC/P, from Karpath-os Island until Monday.

MACQUARIE ISLAND - VK0TS, plans to be active every Tuesday and Wednesday at 0345z on 14222 Khz.

ANTARCTICA - VP8CTR has been active on 18072 Khz around 1520z.

GIBRALTAR - ZB2X is currently active from here.

---ARRL DX Bulletin 26, dated 12 June, 1997

ROYALTY ON THE RADIO

[Would you call this special even station "ER2"? :-)]

Great Britain's Queen Elizabeth II will take to the ham bands ever so briefly later this month while on a visit to Canada. Paul J. Piercey, VO1HE, president of the Society of Newfoundland Radio Amateurs (SONRA) reports that on June 25, 1997, the Queen will visit Cabot Tower on historic Signal Hill in St. John's, Newfoundland, to commemorate the 500th anniversary of John Cabot's "Voyage of Discovery." (This is also the 100th anniversary of Cabot Tower, built in 1897 to commemorate the 400th anniversary of Cabot's voyage.) But there's also an historic radio connection to the site. SONRA operates a ham station in this building to commemorate Marconi's reception of the first transatlantic wireless signal in 1901 at a location some 300 feet from the tower.

SONRA arranged the contact between VO500JC, the Cabot Tower station, and GB500JC, in Bristol, England "in order for Her Majesty to make a brief statement using Amateur Radio," Piercey said. Bristol was the port from which Cabot began his voyage in 1497. Piercey and Dan Goodwin, VO1MX, will be the operators for the event.

Although all arrangements for the radio schedule are in place, Piercey says the exact time and frequency will not be announced ahead of time "because of obvious reasons of the possibility of interference." The QSO will be recorded on audio and video for historical purposes, however. Piercey said it's believed that this will be the first time a reigning British monarch has participated in this type of event using Amateur Radio. "We in SONRA are honoured to be a part of it," he added.

Coincidentally, Prince Philip will be opening Admiralty House--another historic site and now a museum--at roughly the same time, Piercey said. Admiralty House--just outside of St John's in Mt Pearl--was a North Atlantic listening post during both world wars. Piercey said SONRA is helping to install a modern ham station there "with a primary focus on satellite and SAREX communications" (see http://www.ucs.mun.ca/~brads/sonra), but the station might not be ready for use when the big day arrives. As the Patron of the Radio Society of Great Britain (RSGB), Prince Philip is no stranger to ham radio, but there are no plans for him to go on the air during his Admiralty House visit.

Western Samoa QSL bureau closes: Phil Williams, 5W1AU, reports the 5W QSL bureau is being shut down due to a lack of finances and forwarding information for visitors to Western Samoa who are now being issued 5W0 call signs (there are four active permanent 5W1 stations, according to Williams). Williams says that while there is no formal reciprocal licensing agreement, a visitor who shows a valid ham license from his or her home country can get a 5W0 call sign for $15 and "about five minutes" of time.

-- The ARRL Letter, Vol. 16, No. 23, dated 6 June, 1997

Space News

RS-10/11 REPORTED SILENT

The RS-10/11 satellite seems to have gone silent since late May, according to various reports. Jess Burmeister, KB0VUU, reports making two contacts on RS-10 on May 25 (with KB4LCI at 1745 UTC and N0IBT at 1930 UTC). But, on May 26 at 1630 UTC, ARRL staffer Steve Ford, WB8IMY, reported hearing "nothing, not even the beacon." Since May 26, AMSAT News Service says it has received several other reports from around the world confirming RS-10 is silent. Mark Behrens, W4GP,

states he checked all of the A, K, and T beacon frequencies for RS-10 and 11 and heard nothing. That particular pass started in eclipse and came into the Sun about half way through. There is no official word as yet on what has caused the silence of RS-10/11.

-- from AMSAT News Service via The ARRL Letter, Vol. 16, No. 23

MIR to the (I)MAX

Space enthusiasts out there who would like to take a trip on board the Russian Mir space station might do well to take a trip down to Sydney's Darling Harbour. There, the IMAX theatre, which claims to have the biggest cinema screen in the southern hemisphere (1,260 square metres, or about 20,000 television sets' worth) is now screening a film entitled "Mission to Mir".

The movie features trips to Star City (the Russian cosmonaut traing centre near Moscow), the Kennedy Space Centre in Florida, then up to Mir itself for the first docking between Mir and the Space Shuttle Atlantis.

--from the Sydney Morning Herald

LONG-DISTANCE RESCUE SUCCESSFUL

Mervyn Dennis, VE3URN, of Toronto says he recently ran across a highway accident--on 20 meters! Dennis said he was in QSO with his long-time friend Rupert Walford, 6Y5RW, of Montego Bay, Jamaica, last month when Walford was involved in a head-on collision and found himself trapped inside his vehicle on a lonely highway. Dennis reports he contacted emergency services and Walford's spouse in Jamaica via telephone, while staying on frequency to offer comfort and assurance to the injured ham, whose radio amazingly was still operational.

Although Walford was extricated and hospitalized overnight, one passenger in the car died and three were hospitalized with serious injuries. Dennis said the accident occurred when another vehicle attempting to pass two other cars ended up in Walford's path and the two cars collided. He says Walford is still recovering from his injuries but has been active on the air. "I was speaking to him a few days ago," he said.

HELP WANTED

We received the following request from Tim VK2KTM; perhaps someone out there can assist. Tim's letter reads:

G'day

I am looking for the circuit diagram, and hopefully the manual for an old AWA 3r6673 osciloscope. It is probably more than 50 years old, and I am trying to get it going again.

I also need 4 14uf and 3 10uf electros at 600v working, do you know where these are available? I don't know if you are able to help, but i would appreciate any advice or suggestions you have.

tnks, Tim, de vk2ktm"

If anyone can supply the diagrams or components, or can tell Tim where he can get them, please contact the Divisional Office.

Club News

WAVERLEY AMATEUR RADIO SOCIETY

A reminder that our next meeting is on Wednesday 18th June. Raffy Shammay, VK2KRF, will relate his experiences on his recent trip overseas. He will describe problems in working portable in various countries and will demonstrate the use of a digital camera. Doors open at 7:00 pm and the meeting starts at 7:30.
The next project day will be on Saturday, 5th of July so come along from 1:30 onwards and have your T-shirt printed with the society's logo and your call sign - or indeed any other digital image that you may have. Raffy will be arranging the equipment and will also have his camera if you would like something photographed.

The cost should not exceed $5 if you provide your own T-shirt.

The Society's clubhouse is located in Vickery Avenue, Rose Bay, off New South Head Road, next door to the Rose Bay RSL Club, where a number of members gather for a meal before the meeting. Anyone interested in amateur radio is welcome to come along.

--Simon Buxton, VK2EII, President

CHIFLEY AMATEUR RADIO CLUB

The club is open every Saturday at 1:30 PM.

The address is, The Good Shepherd Church Hall, at Hyatts Road Plumpton.
Members guests and visitors are all welcome.

The club holds a 2 meter net on the club repeater at 8:00 every Friday night all checkins are welcome.

If you have internet , Checkout our Home page at.

http://www.zeta.org.au/ramondw

For more information ring (02) 9837 2226 or (02) 9834 1186.

Coming Events:

28 of June, Talk on high speed packet by Geoff VK2XJG

--The Publicity officer Michael VK2EK

Australian Amateur Television Club

THE NEXT MEETING OF THE A.A.T.C. Inc WILL BE HELD SPECIAL ON JUNE 22ND - THIS MONTH - UNUSUAL DATE - SORRY!!

THIS SUNDAY IS OUT BECAUSE OF WIA EXAMS

NOTICE TO ALL MEMBERS, TO THOSE WHO MISSED OUT ON THE AATC CLUB DISC AND THE SPECIAL DIS, SOME WILL BE AVAILABLE FOR THIS MEETING AS

WELL, BRING YOUR DOLLAR WITH YOU.

THIS MEETING IS AS USUAL OPEN TO ALL MEMBERS AND ANYONE INTERESTED
IN AMATEUR OR SATELLITE TELEVISION ON THE AIR OR INTERNET.

FOR MORE INFORMATION ABOUT ATV, CONTACT BOB THE PUBLICITY OFFICER
ON (02) 9587-3491 DURING NORMAL CIVILISED TIMES.

--A.A.T.C Inc. Publicity Officer Bob Barnes

Orange & District ARC

A correction to last week's new item from Orange... the phone number for Peter
Carter VK2ETK should have read 063 61 3439

Those Orange club members wishing to take the club up on its genereous offer
should call Peter on that number. If you missed last week's broadcast and so don't
know what the offer is, give Peter a call! His number again is 063 61 3439.

73 again from Peter.VK2ETK

Manly-Warringah Radio Society

This Wednesday is lecture night at the Manly-Warringah Radio Society, Terrey Hills.
Our guest speaker for the night is Tom Hughes VK2HUZ, who will speak about
boating safety. Tom is a Ferry Master on Sydney Harbour, and a member of the
Royal Volunteer Coastal Patrol, and he knows a thing or two about safety on the water.

As usual, doors open at 7:30pm, for an 8pm start, and visitors are most welcome.
The Manly-Warringah Radio Society meets every Wednesday at the Warringah
Volunteer Services Centre, Kamber Road, Terrey Hills, with business meetings on
the second Wednesday and lectures on the third Wednesday of the month.

If you need directions to get to the club, just call in on the club's two metre repeater
VK2RMB, on 146.875 MHz.

--72 Richard VK2SKY

Hornsby & District ARC

The next meeting takes place, on the 24th. June 1997, at 8:00 pm. Meeting place is,
Mount Colah Ciommunity Centre, Pierre Close, Mount Colah. (Near the Eastern
Entrance to Railway Station). This is the formal monthly meeting, taking care of all
business that has arisen, during the past month. There is no talk or lecture, planned
at this stage, however we are sure one of the members will bring an interesting
topic for an orderly discussion.

Training classes :-

Phone Tony VK2BTL on 9487 3383, or John VK2WRT on 9807 2490.
The Club conducts, a net every Monday night, at 8:00pm,. on VK2RNS. The
frequency is 147.250 with a positive offset. Fee free to join in. All are welcome.
Listeners set your scanner to 147.250.

Should you wish to know more about the Club, please write to :- H.A.D.A.R.C. at
Post Box 362, Hornsby, 2077. or contact the Publicity Officer, John VK2WRT on

9807 2490.

FOR THE 1998 FIELD DAY

--BRUCE VK2HOT, FIELD DAY CO-ORDINATOR AND PRESIDENT OF THE O.R.A.R.C

Gladesville News

To members and visitors a reminder that the deferred monthly meeting will be held at Number One, Birdwood Avenue, Lane Cove tomorrow evening - the 16th - at 7:30 pm.

The meeting was deferred due to last week's long weekend. Car parking is available in the public car park opposite the venue.

Need any information about the meeting - You call telephone (02) 9427 0530 [repeat] during the rest of today or after hours.

Need information about the Gladesville theory lectures available on video tape - telephone (02) 9427 0530 or write to GARC Inc, P.O. Box 48, Gladesville 2111.

--73 Keith VK2ZZO President - TV Coordinator

COMING EVENTS (15 Jun 97)

(Note from the Broadcast Officer, whose computer suffered a meltdown during the week: the list of coming events from mid-July onwards has gone walkabout, so clubs holding events after that time should send their news items again so that the event dates can be included in this list.)

Gladesville ARC monthly meeting.....Monday
Fishers Ghost ARC meeting.....Tuesday
Waverly ARS meeting.....Wednesday
Manly-Warringah Radio Society lecture night.....Wednesday
WIA Affiliated Clubs Officer visiting Western & Riverina areas.....Wed-Sunday
(Griffith on Thursday, Wagga on Friday)
Radio Veterans meeting at Amateur Radio House, Parramatta.....Thursday

VK Novice Contest.....Saturday-Sunday
Dural Technical Committee meeting.....next Sunday
Lake Macquarie Australian Half Marathon (WICEN).....next Sunday
Australian ATV Club meeting.....next Sunday
Hornsby & District ARCmeeting.....24th
Wilderness Rescue Nav Shield (WICEN).....28th-29th
St Albans Horse Enduro (WICEN).....28th-29th

JULY

SMPTE 97 exhibition at Darling Harbour.....1st-4th
Pathfinder spacecraft scheduled to touch down on Mars.....4th
Waverley ARS Project Day.....5th
Colo Classic Endurance Ride (WICEN).....12th-13th
Fishers Ghost ARC meeting.....15th

News items for inclusion in this broadcast can be sent to us by one of the following means:

- via Australia Post to PO Box 1066, Parramatta, NSW 2124
- by fax to (02) 9633-1525
- by packet radio to BCAST@VK2WI.NSW.AUS.OC
- by Internet email to wiansw@sydney.dialix.oz.au

If sending printed copy, PLEASE use a large, plain font, such as Arial or Helvetica, 12 point or larger, and double space your text (this is especially important if sending your news item by fax). Check your spelling and grammar, avoid abbreviations, and use the exact words you wish the announcer to say on air. The more care you take with your news item, the better the announcer will read it.

Hmmm...sounds like you could have some fun with this at your local Mc Donalds. Punch up 35.020 or whatever your local Mickey D's uses for their drive-thru frequency, put the mike in front of the scanner. Then, park your car and go eat, watching the curious passers-by who turn their head in amazement as they hear the orders eminating from your vehicle!

Oh?.... ok and which of the zillions of county, township, city, etc.
entities would you recommend they start with?

>There aren't many enemies of
>amateur radio on the Congressional level, and only a few at the
>State level.

Any verifiable facts to support this statement Gary?

>The politicians most hostile to amateur radio are at
>the local level. That hostility usually takes the form of restrictive
>regulations on antennas, but it can assume other forms as well.

And in one fell swoop the Federal laws can wipe out the local
restrictions on antennas! Just look at what they did with TV
and DDS dishes last year. They even invalidated some restricitve
covenants which are private contracts!

How can you possibly believe that a PAC would be most effective at
"lower levels" of government?

>Recently I was told by a RACES person that in an emergency any license
>class can operate on the HF bands. I have never heard of this.....at
>least not without a control operator? Anyone have an answer?

OK, I said I was going to ignore this thread, and have been, even though some have resorted to sending me emails to continue the debate,but the following information was on the FCC website, although there will probably be disputes now that the FCC doesn't know the rules, either, just like the VEC's dont (ARRL, W5YI, etc) so thought it was appropriate to post here. Particular attention to be paid to #2!!!!::

>Q. What types of two-way communications are amateur stations specifically
>authorized to transmit?
>A. Section 97.111(a) provides for two-way communications. In summary,
>amateur stations are authorized to exchange messages with:
>1. Other stations in the amateur service, except those in any country whose >administration has given notice that it objects to such communications. >Moreover, transmissions to a different country, where permitted, must be made >in plain language and must be limited to messages of a technical nature relating >to tests and to remarks of a personal character for which, by reason of
>their unimportance, recourse to the public telecommunications service is not >justified.
>Section 97.117 provides for international communications. The FCC also issues >a public notice listing arrangements for international communications.
>2. A station in another FCC-regulated service while providing emergency
>communications;
>3. A United States Government station necessary to providing communications >in RACES; and
>4. A station in a service not regulated by the FCC, but authorized by the FCC to >communicate
>with amateur stations.
>5. A participating United States military station during the annual Armed Forces >Day
>Communications Test.

YEP, number 2 is the answer from the FCC in my book. Have also written and asked for clarification of 97.403 and 97.405. Will post those answers IF and WHEN I get them.

I've a few suggestions, I used to service video equipment.

1) Try first the steps mentioned in the ARRL handbook in the interference chapter. Apply rf chokes to the power cords of both the TV and VCR and a trap (high-pass filter) to the RF cable to the TV set.

2) Check the resistor/capacitor network which grounds the chassis of the VCR for RF. Alternatively, you may want to remove these and strap the VCR chassis to a good RF ground. Also, make sure there are no missing screws from the VCR cabinet, some of these provide a ground contact.

3) If the problem is in playback only, the trouble may be that RF is getting into the rotary head preamp. This is particularly acute as its bandpass overlaps 80 M and comes close to 160 M. If your machine is an older, more expensive model (such as the FVH-575) there is a shield over the drum assy but if yours is one of those newer, lightweight models shielding of the drum is helpful. Check under the drum too. If there is a flexible PWB (a "ribbon cable") for connecting the rotary transformer to the preamp IC you may wish to install a shielded cable. Also, you may wish to install bypass caps on all DC leads going to the preamplifier, especially Vcc and Rec/PB switching lines. Shielding the little preamp PWB worked for me once.

4) If your machine is one of the new lightweight all-plastic sets a radical cure may be indicated. You may try removing the top cabinet, front panel, tape transport, and PWB's and line the pastic base you have left with aluminum foil, providing for a ground connection. Reassemble and your modern VCR will be RF tight.

I keep hearing this 'save cw' etc.Who is going to destroy it?If
people want to use CW,it will live forever...if not it will
die.Abolishing the CW requirement for HF phone(which I personally
oppose)will NOT kill or otherwise hurt CW.
I admit, and submit,that Amateur radio needs new blood but there has
to be a way to keep the...person...with the IQ of a rock,off the Amateur
bands.Today it happens to be the CW requirement.Tomorrow it needs to be
something else.

Well, according to Moonet members, the reason that they won't
use better methods is that it wouldn't be a "real" contact unless they
did it with their hands and ears. This was the consensus of a large
subset of the active EMEers when the subject of better techniques
was raised.

There can be no doubt that better techniques are available. The 4 db
Eb/No noted above is not just theory, it is derived from the actual practice
of professionals who must deal with weak signals. Theory says we can
do better, up to a hard limit of -1.6 db Eb/No (the Shannon limit), but theory
doesn't tell us exactly how to do that. The 4 db figure comes from actual
practice used with Voyager, Galileo, and other deep space probes. It also
comes from the actual practice of Lowfer operators working at 160 kHz.

>A DSP decoder will run into serious problems if the signal is not
>just simply buried under noise but distorted by multipathing or doppler
>shift.

Karn has demonstrated a Fano decoder which works with amateur satellites,
whose signals suffer spin modulation, doppler, and Faraday rotation of the
signal path. CDMA cellular uses similar techniques to deal with the severe
multipath problems of mobile cellular operation.

>The second problem is, that most amateur radio contacts are relatively
>short, and having a decoder detect the signal, syncronize with
>the other station and agree upon protocol would be much more tedious
>than simple "human" signal processing.

In other words, you're saying the contacts are contentless. While I agree with that, it ignores the issue. The issue is, can the contact be made at all with one technique and not with the other. The answer is yes. There are digital techniques in amateur use which can achieve a contact when the Morse operator cannot even detect that a signal is present. I've had first hand experience with that on many occasions.

>even in dire emergencies, by anything written elsewhere in Part 97.

Correct. I believe the Sheriff's repeater would be operating under
Part 90 rules (somebody with CFR47 handy look it up). A license
granted under Part 97 conveys *no* authority to operate in the
Part 90 service. You are the same as an *unlicensed person*
when you operate out of the Part in which you are licensed. If
you operate in that service, even if you are an unlicensed person,
you fall under that Part's regulations. The regulations of other
Parts where you may be licensed *do not apply*.

Now, as far as I know, every Part has some sort of emergency
waiver clause, like 97.405, in it's regulations. Even the broadcast
service has such a provision. The details are different, but the
general idea is the same. And that is *if all else fails* you may
use that Part's service to attract aid in an immediate life and
death situation. But the fact that you may be licensed as an
amateur under Part 97 *has nothing to do with that* unless you
are actually operating in the Part 97 service during the emergency.

Now after the fact, you're going to be required to show that you,
as an unlicensed person in the service in which you operated,
were justified in doing so under the emergency provisions of
that service's rules. Thus if you intend to operate unlicensed
in another service, you should be familiar with that service's
particular emergency waiver regulations, or you may find that
you were unjustified in your action, regardless of what you may
have been permitted to do in the Part 97 service.

Don't miss this year's Atlanta HamFestival & Computer Expo!

FUN! FUN! FUN!

The Atlanta HamFestival, now in its 69th consecutive year, is sponsored by the Atlanta Radio Club (ARC) in cooperation with numerous radio amateur clubs and related organizations.

Dates: June 21 & 22, 1997. Designated as the ARRL State Convention. Air condition fleamarket and commercial exhibit areas.

Location: City Hall East Exhibition Center, 640 North Ave., Atlanta, GA.

Hours: 9 - 4 on Saturday, 9 - 3 on Sunday

Forums on Saturday only! : 9:30AM QRP - A forum presented by the enthusiastic
North Georgia QRP Group on building and operating rigs with under 5 watts
output power. Group members will share their experiences of building lightweight full transceivers in kit form.

10:30AM APRS - Ralph Fowler, N4NEQ - (Automatic Position Reporting System) This is a graphical software program that sends, receives, and displays
realtime position information. Learn how APRS was used for vehicle tracking
for the March of Dimes Walk America, Ham Radio and TV equipped weather balloons, camera equipped helicopters and motorcycles during the Summer Olympics.

11:30AM CONTESTING - Neal Sulmeyer, AE6E "The Joys of Contesting" A compendium
of contesting experiences that will motivate any amateur.

12:30PM BASIC ANTENNAS - Tom Rauch, W8JI, Consulting Engineer for Commercial and Amateur Radio Manufacturers - Learn why some antennas work. Learn why some antennas don't work. Let Tom answer your antenna questions.

1:30PM Frank Butler, W4RH, ARRL Southeastern Division Director
Bill Moore, NC1L, DXCC/VUCC An informative League and DXCC Question and Answer Forum.

2:30PM HEARD ISLAND - Wes Lamboley, W3WL
The BIGGEST & BESTEST DXPedition ever! 20 guys spent 17 days in

this uninhabited antarctic paradise for Ham Radio. A dirty job but somebody had to do it.
New world records were set. 1983 was the last time Hams were on Heard Island.

For more information, see http://www.saf.com/arc
Talk-In: Primary 146.82(-), secondary 145.35(-); Continuous information on 147.555 Mhz.

Burt, believe it or not this is the first negative reply I received. And listing in via scanner, I know what you mean by the "mike checks" and "roger that" etc., I havn't personally found it all that annoying since there is always activity somewhere else on the dial but I can see how it can upset some people.

One bit of your post confused me though... first you mention "there is no more magic" in ham radio. Then towards the end you state "I'd better stick with digital and satellite operatng". Isn't that part of ham radio? Or did I miss something in your post (perhaps you copied another message?)

In anycase, I do appreciate your input. Thanks.

<big snip>

some "UPS" are realy fast switching. The run off the power mains untill
they drop and then they switch to the inverter section. I have an older
APC 1200 VA "UPS" that does this. So the statment that you may overheat
somthing is valid.

Icom IC-725 with AM/FM board. This is an all-band (160-10m), all-mode radio, solid state with 100 watts output. It is in excellent condition with original boxes and manuals.

Also, PS-20 power supply and SP-3 external speaker for the radio along with the AH-3 external automatic antenna tuner. This tuner will tune 80-10 with 10 feet of wire and will tune 160M with 40 foot of wire.

Brand new in 1989 this equipment sold for $1400.00. I am selling it for $700 firm and will pay shipping.

Please email me for more information.

>30 minute trip so gotta go!!!!

Thanks for the reply (and to the dozens that emailed me!) You (all of you) may have given me the encouragment (kick in the butt) I needed to go for it. Most of the complaints I here about ham radio is about the types of conversations they hear. Since most of my "ragchewing" would probably be the daily 1-hr commute to work, any conversation would be welcome. During "play time", what excites me is getting into the less-traditional and experimental stuff. Radio telemetry of environmental data, SS/FSTV, Vehicle Tracking, Microwave and the like. So I'd imagine there's not many annoyances in those field (other then trying to figure out why your setup isn't doing what you thought it would).

>the service into a hobby in terms of its regulatory raison d'etre ... no
>amount of your mealy-mouthed obfuscation will accomplish that ...

Gee Carl, you edited out the Oxford definition of "hobby" in your
reply. Here, let me include it again for your perusal:

Hobby: An individual pursuit in which a person is unduly devoted.

So, you'd rather we not view the ARS as a hobby. That must mean
you'd rather we not be "unduly devoted" to it. If so, you're not
going to get any hams sitting 12-24 hour shifts handling disaster
message traffic, for I cannot see anyone *volunteering* to pull
such shifts who wouldn't be "unduly devoted."

I am unduly devoted to the ARS; thus, according to the Oxford
dictionary, it is a hobby of mine. Accept it.

I am considering buying the JPS Communications Dual DSP noise reduction unit to help me deal with the noise problem I suffer from as a resident of a 30-unit apartment building. My receiver is an NRD535d, which is notorious for its somewhat muddy audio. The muddy audio and the RF noise and interference in my residence combine to make shortwave listening a bit less than enjoyable for me much of the time. (Moving from this place is not an option for a while yet.) I currently use an 80-foot dipole attached to the outside of the building as an antenna. What I would like to get out of any efforts to improve my situation is to make voice broadcasts (news, utility stuff, etc.) more crisp and clear so I can hear them better despite the noise and muddy audio. What do you think of my plan to use the JPS DSP? Has anyone had experiences they could tell me about? Are there better solutions? Any input will be very welcome, as this is a pricy unit: $349.95 list! Please reply via private email only, as I seldom get to read this news group. Thanks in advance for your replies...

5860. Kids Day Operating Event

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-18 00:00:00 UTC
From: hansbrakob@juno.COM
Message-ID: <19970617.224147.3574.0.HansBrakob@juno.com>
Source record: 195510

Just a reminder:

Kid's Day Operating Event
Sponsored by the Boring Amateur Radio Club

1. Purpose: The Kid's Day Operating Event is intended to encourage activity by younger people (licensed or not) using Amateur Radio. The goal is give unlicensed young people some hands-on experience on-the-air, so they might develop an interest in pursuing a license in the future. It is also intended to give hams a chance to share their station with their children.

2. Dates: 21 June 1997 and 3 January 1998.

3. Time: 1800Z to 2400Z. No limit on operating time.

4. Suggested exchange: Name, age, location and favorite color. You are encouraged to work the same station again if either operator has changed. Call "CQ KIDS DAY".

5. Suggested Frequencies: 14270 to 14300 kHz and 7200 to 7250 kHz. Be sure to observe third party traffic restrictions when making DX QSOs.

6. Reporting: Logs, comments and funny stories may be posted via the internet to kids@contesting.com. You may review these postings by visiting http://www.contesting.com/kids/ with your web browser.

Those without internet access may forward their comments to the Boring Amateur Radio Club and they will be posted for them. A summary of the postings will also be sent with your participation certificate.

7. Awards: All participants are eligible to receive a colorful certificate.
These will be sent to all stations participating shortly after the contest.

8. More details may be obtained from the Boring Amateur Radio Club at the above address or at http://www.jzap.com/k7rat/.

> speed. (Note for several machine digital techniques, Eb/No is *not* equal to CNR,
> it can be better, sometimes a lot better, due to various coding gains. For OOK Morse
> they are always equal, and that can be a severe handicap for OOK Morse.)
>

Hi,

Just a few observations about this statement;

1, What about the apparent coding gain of Morse over say sending ASCII characters digitally? You dont need to send as many characters with Morse than you do otherwise (at least a 4 dB gain here Morse= about 3 characters per letter, ASCII= 8), and there is an a-priori effect with a human Morse operator kind of a built in FEC since you may miss a letter, but not the whole word. Voila, error correction without adding bandwidth.

2. What digital format are you comparing for the 4 dB Eb/No number and at what error rate for both? I am assuming that to acheive the 4 dB in a digital system you will need quite increased bandwidth for the FEC information and that can lead to enormous coding gains.

3, How do you figure Eb in a Morse system? Won't it depend on your sending speed? Ok, if it is the same as C/N, what bandwidth are you assuming? Morse detection by the Human ear can operate in negative C/N conditions for a given bandwidth. Also the bit length is modulated (dits and dahs), how is that accounted for?

4. On the digital systems that work when Morse cant be detected, you are right about that, but the sending speed is way slow which allows them to integrate the Eb for a looooong time. This is what NASA use for interplanetary space craft pictures.

I'm not throwing stones here, I just don't understand the numbers fully? I'm not a fan of Morse in Ham Radio so I don't use it, but I do relize there are some advantages in noisy signal enviroments. I'm just interested in the math, not a debate on Morse tho.

Just curious,

KF4SCU

VCR sucks!
If your problems are when transmitting on 1.8 or 3.5 MHz, it is very
likely your RF goes straight into the video amp. This amp has 100 dB
of gain on these frequecies.

Solution could be to put the vcr in a well-screened box, or just dump
the vcr and tell the yf to start clean up the house instead.

One of the largest radio clubs in the area - dating back 30 years has been brought to it's knees (no pun) by a group of so-called hams who know nothing but BOOM-BOXES .... SPRAY PAINT....and BAGGY-PANTS.

Ethnic labels? Sure you betcha! The HI-SPANDEX and KNEE-GROWS are RUINING HAM RADIO in the area ------- thanks to No-Code and other liberal retards opening up the hobby to every bastard who has a nickle bag .... greasy hair and baggy pants. All in the name of the ARRL and their "dues".

HAM RADIO.............near death in the greater Los Angeles area.

Whoppee for me.....................JB

Boring Ham Radio?? Thank goodness for hams in Los Angeles - not boring
at all.............none of that :hi hi OM" crap either on SEVERAL of
the "animal farm repeaters".........sex-drugs-rock and roll.......and
all body parts in between. Yawns are only evident because of the
all-nighters where fun and good times are had by all (almost).

Daniel Perez (perezd@ix.netcom.com) wrote:
: Hello I am new to ham radio and would like to have recomendations on the
: best way to learn morse. Should I get the tapes and if so which is the
: best or should I get one of the computer programs and again which is the
: best or should I get the handheld morse tutor from MFJ.

IMHO the best way to learn morse code is to buy a course called "Code Quick". If you have average ability you will be able to copy all the code you need for the 5 wpm code test in two weeks. It took me longer, but I had been trying to learn, with no success for 29 years.

Once you learn the code, the only way to improve speed is with practice. This is where the W1AW broadcasts, computer programs, etc, come in. Of course you could be old fashioned and actually use the radio for QSO's.

You don't need a license or a radio, if you look for HF antennas and go introduce yourself you will find (not always on the first try) a ham who is willing to let you operate with him/her as control operator.

Also remember that no-code technican class licensees may operate cw on 6m and above. While VHF cw gear is hard to find, you can do it by looking for antennas or asking around on the local repeater.

I did use an MFJ code tutor and found it invaluable. It allowed me to convert commutation time on the train into code practice time, but only for "head copy".

From: Burt Fisher <burt1@rocketmail.com>
Message-ID: <33A7D592.7B4148EB@rocketmail.com>
Source record: 195518

What Burt preaches is really true. I usually only operate digital
modes,
but when I listened to some VHF and UHF repeater activity today, what
Burt
has been telling us all along really makes sense. When I got into this
hobby some 4+ years ago, I operated phone most of the time. Typical
contacts were spent talking about how to position oneself correctly to
hit
the local machine, or how close one needs to speak into their
microphone.
Occasionally things got exciting and people talked about the bad hum in
their radio, or even about the weather. What happened when I turned my
radio back on today and listened to the same people I used to chat with
years ago?

"Hey, I'm closer to the mic, how's it sound now?"
"Let me see. Maybe if I stand up you'll hear me better."
"Yeah, some WD-40 on that tractor should fix the squeaking noise."
"Hi hi"
"How's the wife?"

Along with this redundant nonsense, the same people who had gotten their

licenses years ago STILL had no idea how to use their radios. Failed
autopatch after failed autopatch, callsigns getting mixed up, and piss
poor operating in general. Not to mention all the weird codes that must

have come from some war movie (roger, out, kick it back, etc.). Even
the
people who I considered hard core operators years back are doing nothing

but testing their microphones (probably the same ones they had years
ago)
and talking about how strong their signals are, STILL. Any contact not
containing one or more of the phrases above was just a boring discussion

about how somebody got started out in ham radio, what type of "rig" they

have, how "mic shy" they are or were, etc. Even repeaters linked up
between different states are the most boring thing to force oneself to
listen to. Nothing but old men talking about their various retirement
activities. Sad, really. I'd better stick with digital and satellite
operating.

>EVERYTHING like our little ego baby Jim.

Reread the above line, James. I don't remember it saying anything about 'backing' anybody. It simply made a comparison, in my NSFHO. I'm sure that any 'filthy slimeball', when compared with Spew, would come out on top. I'm not sure how you can tell that I 'know everything' from the one line above, James. Are you, by any chance, studying Grandpa Lennys CRT Psychology Techniques, or are you just trolling for attention ? Have you met Mr. Fisher in person, and can you verify that he is indeed a 'filthy slimeball' or have you just derived that after taking your first CRT Psychology lesson ? Still hung over from too much Lite Beer at Super Bowl XXVIII, or did one of the kids just pee in your Cheerio's this morning and you are having a bad day ?

If you have a project that you would like to share,
QST wants to hear from you!

We're looking for project articles ranging from the simple
to the complex--antennas, antenna tuners, amplifiers (HF,
VHF, UHF), microwave components, receivers, transmitters,
power supplies, test equipment, remote control, digital--the
list is almost endless!

Not only will your article appear in the America's most
popular Amateur Radio magazine (read by over 176,000
worldwide) you'll receive $65 for each published page.

To submit an article for consideration, simply send it to:

ARRL
Attn: Paul Pagel
225 Main St
Newington, CT 06111

If you have an *idea* for an article, but you're not sure
if it's what we're looking for, send a brief description
to Paul Pagel at:

ppagel@arrl.org

You'll find a complete QST author's guide on the Web at:

http://www.arrl.org/qst/aguide/#QST

And we're always interested in seeing candidates for
QST cover photography. Before you send your photos,
however, see our requirements on the Web at:

5877. For Sale: Yaesu FT 890 AT + accessories for home and mobile use.

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-18 00:00:00 UTC
From: Michael Conner <mconner2@utk.edu>
Message-ID: <33A831DF.66FF@utk.edu>
Source record: 195527
Cross-posted to: rec.radio.amateur.misc,rec.radio.swap,rec.radio.amateur.equipment

FOR SALE:

Yaesu FT-890AT in very good condition.
Has built-in antenna tuner (useful for mobile), 100 watts transmit,
built-in keyer, general coverage receiver and all-mode transmit. I
always found this 890 to have a great receiver.

Also for sale:

Yausu YS-60 SWR + Power meter (matching color to 890)
Astron RS-50M (with meters) (barely used)
Bencher Keyer BY-1 (barely used)
Hustler Mobile resonators for:
80, 75, 40, 30, 20, 17, 15 and 10 meters (low power models)
and two masts - one stainless steel and other is fiberglass.
(all in good condition)

and I'll throw in a 40' length of 9913 coax.

Prices dependent on who pays shipping, but figuring:

FT-890 $750
YS-60 $70
RS-50M $175
BY-1 $ 50
Hustler $140 for all.

Would prefer to sell entire package. Am selling because work hours are
too long and I don't travel much any more and the cash would be useful.

Please e-mail me for further details, or call in afternoons at work:
(423) 974-0123.

Without knowing any better I'd guess that FCC staff know their rules
no better nor worse than the IRS Taxpayer Information Service knows
the Tax Code rules. What do you think?

As for who say whom is wrong, so far all I know is that the Question
Pool Committee of the National Conference of Volunteer Examiner
Coordinators says that they (the Pool Committee) made some errors in
the Element 2 pool dated December 1, 1992. It's no big deal if exam
candidates learn the rules and not just memorize the pool answers.

> Particular attention to be paid to #2!!!!::
>
> >Q. What types of two-way communications are amateur stations specifically
> >authorized to transmit?
> >2. A station in another FCC-regulated service while providing emergency
> >communications;

Sounds okay to me. But exactly what does that say to you about an
amateur transmitting out of band? Or is this a new topic?

> YEP, number 2 is the answer from the FCC in my book. Have also written and
> asked for clarification of 97.403 and 97.405. Will post those answers IF
> and WHEN I get them.

I too look forward to their reply. In my own mind I reckon that
these sections mean that the prohibitions stated in Part 97 don't
apply in emergencies. These prohibitions appear principally in:

97.113 Prohibited transmissions.
97.307 Emission standards.
97.315 Type acceptance of external RF power amplifiers.

So you could certainly use poor quality emissions or an unapproved
amplifier, transmit on behalf of your employer and automatically
retransmit other transmissions in appropriate emergencies. I don't
believe that these sections allow you to transmit out of band (or
even out of your class privilege) because the rules that make that
illegal are not in Part 97 but in the laws against unlicensed

transmissions.

Also Dewey, please understand that I am not saying that it is either wrong or punishable to break the law in emergencies. This discussion started with what was permitted (lawful) not what was morally right and proper to do in the circumstances. But if you wish to discuss the latter I'm sure that you and I have no differences whatever.

Regards,

Hello

Heatkit model HW-7 with macthing power supply.
covers 40m 20m15m of the cw band.
1 vfo and 1 place to but crystals
In good order but power supply needs new filters
$100

Mfj 949e Antenna tuner
New
covers 160m to 10m
handles 200 watts
built in dummy load
much more too it just look in MFJ catalog
$120

Add $15 for shipping Add other $15 if you would like C.O.D

I think Jim is a Burt Fisher in training. I bet he's the only guy in
Hawaii that sits on his computer 24 hours a day. What a loser.

Is it Jeff or Jim? Is your psyche fracturing such that you now have aliases? How does it feel to be a Burt Fisher wannabe? I tell you one thing boy,you keep sending un-solicited e-mail on that University server and your pompous ass is going to be out of a job. And K4YE has been on his best behavior since this post. He has stopped qrm'ing. Now if we could just get Kehler to stop being a pompous,know-it-all asshole. Oh well,one post at a time!

I have the same problem with a $500 Sony 4 Head Stereo VCR.

I run a Drake C-Line barefoot into a Vertical, not a high powered
station. When it happened to the VCR, it was actually playing a tape
(IE, not the tuner). This surprised me greatly and I'm not sure that
there is a magic fix for you.

A couple of thoughts though, remove the Antenna connection to the VCR an
check. RF could be be getting in through here and coupling in a odd
places. Put ferrite beads on all the connections going into and out of
the VCR. If neither of these things help then it could be coupling
directly into the VCR head.

Good Luck!

BOSTON AMATEUR RADIO CLUB ANNOUNCEMENT

FOR FURTHER INFORMATION, CONTACT: Bob Wondolowski N1KDA
Tel: (508) 865-5822

SPECIAL VE SESSIONS IN JUNE

Since the question pools for the Novice and Tech exams are changing on July 1st, we will be holding two extra VE sessions before then. While these sessions are geared towards elements 2 and 3A, we will offer all elements at the sessions.

The first one will be on Monday, June 23rd at the Pierce School at 50 School Street in Brookline, Room 110 next to the cafeteria. The session begins at 19:00 local time. There is a free parking garage at the circular driveway. If driving, enter School street from the Washington street side (opposite 394 Washington). Check http://www.barc.org/barc/school_map.gif for more info.

For those traveling via public transportation, take the 'D' branch of the Green Line to the Brookline Village stop and walk down Harvard street to School Street, or take the 66 bus and get off at at School Street. Talkin on 145.23.

The second will be on Sunday, June 29th at 09:00. This session will be held at the Boston Amateur Radio Club Field Day site at Larz Andersen park in Brookline.

See http://www.barc.org/barc/fd_97_ann.html for directions.

We give all exams (Novice thru Extra, CW and written), and you don't need to pre-register. Please bring the following with you:

- Your current license *and a photocopy for the ARRL*, if you are upgrading
- Any CSCE's you are claiming, and a photocopy of them
- Valid ID (picture ID preferred)
- A pen and a calculator (if you want to)
- $6.25, good for all the tests you take that night, except for retests; Novice exams are free.

FCC Form 610 will be provided.

---

bit bucket /n./

1. The universal data sink (originally, the mythical receptacle used to catch bits when they fall off the end of a register during a shift instruction). Discarded, lost, or destroyed data is said to have `gone to the bit bucket'. On Unix, often used for /dev/null. Sometimes amplified as `the Great Bit Bucket in the Sky'.

2. The place where all lost mail and news messages eventually go. The selection is performed according to Finagle's Law; important mail is much more likely to end up in the bit bucket than junk mail, which has an almost 100% probability of getting delivered. Routing to the bit bucket is automatically performed by mail-transfer agents, news systems, and the lower layers of the network.

3. The ideal location for all unwanted mail responses: "Flames about this article to the bit bucket." Such a request is guaranteed to overflow one's mailbox with flames.

4. Excuse for all mail that has not been sent. "I mailed you those figures last week; they must have landed in the bitbucket." Compare black hole.

This term is used purely in jest. It is based on the fanciful notion that bits are objects that are not destroyed but only misplaced. This appears to have been a mutation of an earlier term `bit box', about which the same legend was current; old-time hackers also report that trainees used to be told that when the CPU stored bits into memory it was actually pulling them `out of the bit box'. See also chad box.

Another variant of this legend has it that, as a consequence of the `parity preservation law', the number of 1 bits that go to the bit bucket must equal the number of 0 bits. Any imbalance results in bits filling up the bit bucket. A qualified computer technician can empty a full bit bucket as part of scheduled maintenance.

>resistors should do the trick.

The problem with building an attenuator isn't that they don't work, but
rather that they have to work on receive and transmit, and knocking
down your receive signal raises the amount of gain the user needs
in the transverter. What would be really good, would be for
manufacturers to come up with a common standard for transverter
operation, and a common output method. Also, I remind everyone
that to protect their transverters, they definitely need to be sure that
too much power put into the transverter causes the ALC circuitry to
immediately drop the output power from the transceiver. It gets
real expensive to replace some front ends on transverters if the
circuitry isn't there or doesn't work to lower output, and most users
eventually forget to lower power. Even the Attenuator you described
can get smoked and then allow too much RF to pass on through.
Letting the smoke out has never been a good idea.

>Well, according to Moonet members, the reason that they won't
>use better methods is that it wouldn't be a "real" contact unless they
>did it with their hands and ears.

So what.

If there really was a way to dramatically cut equipment complexity
and cost by using some form of DSP, allowing e.g. EME contacts
with a single yagi and 100W (on both ends), this would certainly
become very popular, no matter what current EME-ers think.

But as I mentioned before, we are not there yet, even if one reduced the
bandwidth and transmission rate substantially.

>The 4 db figure comes from actual
>practice used with Voyager, Galileo, and other deep space probes.

Same as in CLOVER: if transmissions are quite long, it works well and
efficient, but for quick information exchange, the protocol overhead
becomes a problem.

>Karn has demonstrated a Fano decoder which works with amateur satellites,
>whose signals suffer spin modulation, doppler, and Faraday rotation of the
>signal path.

No dobt there will be progress in the future.

>In other words, you're saying the contacts are contentless. While I agree
>with that, it ignores the issue.

Did I? if a contact lasts a minute, and callsigns, locators and numbers
are exchanged, regarding this as contentless is just your personal
opinion.

It seems that the FCC regs might only apply if you apealed your
case to a federal court.
If you transmit on the Sheriff's repeater to save the Sheriff's life,
the Sheriff might be greatful to you. But if you operate on the
Sheriff's repeater to save your own life, the Sheriff might rather
you be dead, than operate on his repeater, or even that you had
equipment that was capable of transmitting or receiving of
his repeater. So he might just seize your radio that could do that.

So unless you intend to take it to court to get your radio back,
it's history. And if there had ever been any interference to
the Sheriff's repeater, you might have to prove that you did not
cause it. Etc.

The cases I have heard of, people loose their radio to the Sheriff,
and their license to the FCC and the court.

Operate in band. Help your local radio club install autopatch.

I have for sale an Icom 735 for $575.00 firm. I will cover the shipping to you.
It is in good working condition and has the box & manual. I purchased the radio in 1992, and I am the second owner, so I am not exactly sure on the age,but believe it is 8 to 9 years old. It is just the standard radio, no added extras like filters. I am willing to meet up with someone on the air if they would like to hear the radio.

For more info you can e-mail me at:

t95194@aol.com

Please send inquires to my e-mail address instead of posting them here, since I am not sure when I will return again.

73's & Thanks

If you look through some Linear data books you should find some
application notes for some of the op amps that give band pass
filter designs called "state variable" circuits which are
quite effective, as well as other configurations. Quad package
op-amps are the ones to use. However, if you want a tunable
filter that is something else. What about switched capacitor
filters? Those are readily available in IC form.

I suspect it will take more than a band pass filter to
resolve CW, SSB and AM.

5911. V-Beam Array Project

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-19 00:00:00 UTC
From: Jim Reid <jreid@aloha.net>
Message-ID: <01bc7cfb$898a29a0$53070ccf@kh7m>
Source record: 195412

As a diversion from all the political debate within the amateur
radio community on the groups; and as I have sent my
thoughts off to the ARRL on these issues, thought I would
share my Summer time project plan for a V-beam set up.

Such a set up was described by Lloyd Colvin in QST for
August 1956!! I had thought up the idea on my own
while looking at the landscape behind my QTH here on
Kauai. I posted a speculative note about the idea on one
of the amateur radio lists of the internet. Bill, K4CIA offered
to mail a copy of the Colvin article. That clinched
my thoughts. So, have at last come up with a plan to
put such an array up, and have made some progress,
even thought the layout of the land is tough.

The planned setup is to span a rather wide, "jungle"
filled ravine!

Over the past weekend managed with much effort to get two
long lengths of Dacron rope across the ravine! It can be done.

Ropes are around 590 or so feet long. In Lloyd's article, as
he described it in the QST for August 1956: he strung out
four 584 foot wires, spaced every 45 degrees,
covering an arc of 135 degrees. With switching,
all azimuths are covered, as the V radiates
approximately equally in a bi-directional pattern,
down about 2 dB or so in the direction of the
V apex from the V "mouth" direction. On 40 meters,
"LB" Cebik has modeled this array: he finds about
9.5 dBi peak gain, at an elevation angle of 17 degrees,
and about 7 dBi minimum across a wide "tulip" pattern,
if the set up is about 50 feet high over flat ground.
Of course, this one is to be over a "jungle" filled
ravine, but will still be interesting to see how
it plays. Per LB, the results should be about
the same as a 2 element yagi on 40, were it also
at 50 feet, but a lower radiating take-off angle,
just what is needed out here -- long ways to anywhere
else!

Saturday, with much grunting, climbing, and *#$@%&,
we got around 590 feet of rope to span the distance.
Required was clearing the top of a 70 or 80 foot
mango tree, getting through a hau tree forest/thicket,
crossing a swamp, up the other ravine side, and then

trying, unsuccessfully to climb many, many feet up into very high trees! The bow at last solved that problem also. Fired back out of the forest, so the arrow fell back into the swamp (which is home to LOTS of mosquitoes!).

The entire job, in fact, could only be done with the help of the compound bow and arrow, the game tracker string gadget, and several arrow shots!!

The biggest challenge was the hau thicket. Long ago the Hawaiians planted hau tree thickets all around villages as high protection walls. They are impossible to cross without a lot of climbing, limb breaking and cutting with machete, etc. We also found that the highest hau tree limbs know exactly how to reach up, grab the game tracker string as it settles down, and completely entangle it!! So we had to climb to the top of the thicket, with much added commenting along the way, to disentangle to clear the string.

We found it best to pull the Dacron rope along a ways at a time so as to not put too much pull tension on the game tracker string at a time. Eventually, the Dacron rope will pull the V-beam wires into place, spanning the ravine and, I hope, leaving all the wild growth far below.

Of course, it also required several waddings across the shallow swamp at the bottom of the ravine, as the game tracking string continued to get tangled in something every few moments!!

During such a project, the shack on the belt becomes a very handy tool: "please bring me the machete", "please climb around there, and do thus or so", etc.

Sunday afternoon, got a second rope across.

So that is where the project sits for now. The trade winds are kicking up again, so may have to defer more arrow shots till they calm below 25 to 35 mph gusts! Really blows the string trailing the arrow way off course!

Have gathered together most of the needed materials: a 40+ year old E F Johnson KW Matchbox balanced tuner, and some, probably equally old, Elgin Watch Company Advance antenna switching relays. Am getting the necessary wire on order this week from Press Jones, the Wireman, and am fiddling with the layout for a little switching box to mount up at the V feed point to select the wire pairs. Will probably use 300 ohm windowed twin line as the actual radiating elements; probably 14 gage conductors, CCS, for lots of strength. Gusty trades and the occasional

tropical storm that will blow across this island will require
strong supporting ropes and conductors! Feed line will be
450 ohm twin line from the relay box down to the
Matchbox balanced tuner in the shack.

Probably be a few more weeks before these get fired up.
Trust the performance will match the anticipation, hi.

>kr4wm@sccoast.net

Well, the first step is to quit using illegal power. The second step is to
get your antenna as far away from the VCR as possible. The third step
would be to improve the shielding of the VCR. VCRs use frequencies
in the range of 2.5 to 8 MHz to record video on tape (the recording is
FM). The heads will respond to the H field of any RF source in this
frequency range. The head preamps are very high gain, and intended
to amplify the weak signal recovered from the tape. You have to keep
the field strength from your transmissions low enough at the video heads
so that they don't override the signal off the tape. The demodulated FM
signal off the tape goes to video amplifiers with response from DC to 4 MHz,
so 75m signals can be directly amplified by these amps too. The only way
to prevent this is to make sure there is enough shielding to stop signal ingress.

5915. NEED 170.245 MHz Transmittor schematics

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-19 00:00:00 UTC
From: Paul DiSciascio <thenut@netaxs.com>
Message-ID: <33A9C835.1D9B33F9@netaxs.com>
Source record: 195416

If anyone could draw up some simple schematics for a simple transmittor that will operate on 170.245 MHz, I would greatly appreciate it. I'm pretty new to the ham world, but I can understand the schematics. It doesn't even have to be voice, but that would be nice. Thanks a lot

Judging from a combination of memory and a quick 'scan' of the
manual,the MFJ259 works with 50 ohm coax only.I may be wrong but I dont
think it is likely.Sorry:<)

Yep, ham radio has become nothing more that a licensed cb service. It
has lowered itself to the level of cb, which is pretty low. Ham radio no
longer deserves the frequencies it abuses.

Jim was right - you are an "unstable" character. You've been harrassing
him for quite some time. I believe you might want to contact a lawyer -
there might be criminal charges brought against you.

>I tell you one
>thing boy,you keep sending un-solicited e-mail on that University server
>and your pompous ass is going to be out of a job.

Let's see, I CC'd you when I posted the above "I did sent Jim a friendly
email and he says his station has been QRT for quite some time. He also
says you threatened him with bodily harm. You're a bad boy, James."

If you believe the university is going to fire me for CC'ing you, then
you belong in the looney bin. I did save your email response, though.
Abuse@southbell.net has a copy, too! I mentioned something about you
"... inviting 200,000+ readers of r.r.a.m to send Jim unsolicited
email..." You're a bad boy, James.

>And K4YE has been on
>his best behavior since this post. He has stopped qrm'ing.

It might be that the *real* QRM'er read your initial post.

>Now if we
>could just get Kehler to stop being a pompous,know-it-all asshole. Oh
>well,one post at a time!

I bet he doesn't give you a second thought - probably thinks more
about the gecko crawling on his cealing than about you; funny that
he's on your mind quite a bit, though.

73, and stop being such a bad boy, James,

Well Randy, you were close, the answer was the FCC now doesn't know their
own rules!!
Looks like no matter what written, posted, accepted evidence is produced
will be argued into the ground.
The FCC did give me an answer back, it states:

>Thanks for the inquiry.

>C.F.R. Sections 97.403 and 97.405 were added in PR Docket No. 88-139
>"In the Matter of Reorganization and Deregulation of Part 97 of the Rules
>Governing the Amateur Radio Service" 54 Fed. Reg. 25857, June 20,
>1989. In the Notice of Proposed Rule Making adopted March 24, 1988,
>the FCC proposed to incorporate into the rules for the amateur service,
>the special provisions in the ITU Radio Regulations pertaining to
providing
>communications during emergencies.

>Section 97.403 is based upon ITU Radio Regulations Resolution No. 640
>which provides for amateur stations assisting in meeting essential
>communication needs when normal communications systems are
>overloaded, damaged or disrupted because of a natural disaster.
>Section 97.403, however, does not limit FCC license grantees from
>providing such assistance to "natural" disasters. This allows amateur
>stations to also assist during manmade disasters.

>Section 97.405 is based upon the general international provision for
>assisting stations in distress as stated in ITU Radio Regulation No. 347.

>I hope this provides the information you seek.

I haven't had time to look up the ITU regulations listed here, but am sure
that will explain further.

No moron buddy what I did was post a fact that has been known by
everyone stateside for the last five years. I can't help it if your
stuck out there in the twilight zone staring at young boys in swimsuits
with impure thoughts that's your gig. He's jammed for years WITH his
callsign for years. It was W4MWT. Now the guy has a sneakier approach.
He just received a Vanity call K4YE. Now he jams with pre-recorded
material and QSO's on the band unscathed. Well after df'ing this garbage
to the door of his station that suppossedly has'nt been on the air in
over a year (another lie) for about the tenth time in two weeks, I ran a
search on this jerk. Guess what I found? Articles wrote by this idiot
about stopping jamming on repeaters. Talk about Jekyll and Hyde! So I
asked this distraught,drunken,grieving jerk (his father died last year)
if he would stop the deliberate qrm to the 20 meter dx nets. He denied
it. I then df'ed him two more days in a row (he lives 2 miles away). At
this point I had two options: 1. Ride over to his house,drag him out the
door and beat the living hell out of him. Kind of appealing,especially
after years of this crap. But,highly illegal so I ruled that out.
2.Expose this qrm'er to everyone,which is what I did. Result? So far
it's stopped. As long as he does'nt jam those nets,everything is fine.
Oh and for all the no-coders guess what? K4YE,KH2D,and KH2PZ are all
guess what? Extra class ops. That's right. So thanks,QRM'in Jim
K4YE,Stupid Jim KH2D, and Sexually ambiguous Jeff,KH2PZ. Not only did
you morons fan a hard to believe little fact into a raging inferno, but
showed the no-coders how stupid Extras can be. That should give them

lots of ammo. Two Extras helping defend a known Extra qrm'er so a General in a Condo can't use the dx nets. And you high and mighty jerks want to know what's wrong with ham radio? Go look in the mirror. Your not the solution,your the problem. God I love this ham radio stuff! Next?

5935. Field Day Sites List/Orange County,Calif. area

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-19 00:00:00 UTC
From: n6uzs@juno.com
Message-ID: <866706992.26459@dejanews.com>
Source record: 195475

Below is a list of local Orange County clubs and their Field Day sites. This covers the South, Central and North sections of the county. Remember that Field Day officially starts at 11am Saturday, June 28th and runs for 24 hours to Sunday, June 29th at 11am. For complete rules on the contest surf
over to the ARRL web site at http://www.arrl.org and do a search for "Field Day Rules".

The BEST time to visit any Field Day site is all day Saturday the 28th. Sundays are usually when clubs tend to break down and go home and not a whole
lot of operating going on.

And now to the clubs:

Organization: Fullerton Radio Club, Talk in on 147.975 -600 no pl
Info Contact: John McCauley (KD6PGC) email: jmccauley@earthlink.net
Location: West Coyote Hills Tree Park In Fullerton.
Thomas Guide (Orange County) page 738 in quad D-3
Located about 2 blocks north of Rosecrans on Parks Avenue
in West Fullerton. Parks Avenue is located between
Euclid (on the east) and Gilbert (on the west).
Just a bit down the hill from Gilbert is Beach Blvd. The
park is long and narrow and is right on the curb on the
west side of the street (impossible to miss).

Comments: We are running virtually everything -- HF (with a 20 meter 3 element yagi), 6 meter (with a beam on a tower), 2 meter all-mode (with a 13 element beam), 2-meter FM (run by solar power), a novice-tech station on 10 meters (with a dedicated A-99 10 meter 5/8ths wave vertical). The only thing we don't have yet is a packet station. So if anyone is interested in helping us for a few hours doing packet traffic, that would be most appreciated. I almost forgot to mention, we are putting up a 450 ft. antenna for 160 meters. We did this last year with great success. Powering all of this is a 10KW diesel generator. Everyone is welcome to stop by and visit. We will be running all 24 hours of Field Day.

There will be a steak barbecue on Saturday, June 28th only at 5pm. Other items
such as salads, food dishes, and desserts will be in potluck style so bring
something to share. BBQ's available to cook chicken or burgers as well.

Organization: South Orange Amateur Radio Assn. (SOARA) Talk in on 147.645 -600 no pl
Info Contact: Patti Peschel (KD6VKS) email: kd6vks@earthlink.net

Heiko Peschel (KD6SBI)
Location: James G. Gilleran Park in Mission Viejo
Thomas Guide (Orange County) page 922 in quad F-1
Exit the I-5 Freeway at La Paz and head east to where it
ends at Olympiad Rd/Felipe Rd. Turn right on Felipe and
the make the first left turn into the upper lot at
Gilleran Park. Follow the parking lot around to the picnic
area.

Comments: We will be setting up early Saturday morning and running
continuously through until Sunday morning. We will have 3 HF stations this
year, two for serious contesters on CW and voice and one for folks just to
have fun with and learn what HF is all about. We will also have 6 meters,
2 meters, 440 and who knows what else (our big planning meeting is this
coming week). Past events have also included packet, ATV, solar power and
even 10 Gigahertz voice. Everyone is welcome to come out and enjoy the
fun. We usually have a good spread of food for all who show up and there
will probably be a barbecue Saturday night.

Organization: Orange County RACES Talk in on 146.895 -600 pl 136.5hz
Info Contact: John Roberts (W6JOR formerly WA6LAB)
email: jroberts@telecom.dgs.ca.gov
Location: Craig Regional Park in Brea
Thomas Guide (Orange County) page 739 in quad C-2
Comments: Camp out both Friday and Saturday nights

Organization: West Coast Amateur Radio Club Talk in on 145.440 -600 pl
136.5hz
Info Contact: Jane Avnet, (KD6ODV) Email: kd6odv@primenet.com
Location: Fairview Regional Park in Costa Mesa
Thomas Guide (Orange County) page 858 in quad F/G-7
Near the miniature train on "Goat Hill"
Comments: None

Organization: Huntington Beach RACES
Info Contact: Mel Goldberg (KO6TF) email: myriad1@ix.netcom.com
Location: 9am to 6pm Saturday ONLY at Central Park between the
library
and Shipley Nature Center, Huntington Beach
Thomas Guide (Orange County) page 739 in quad C-2
Comments: None

Organization: Clairemont Repeater Association (CLARA)
Talk in on 145.220 -600 pl 103.5hz
Info Contact: Mike Obermeier (KD6SNE) email: ifindem@fia.net
Location: Rancho Santiago College in Santa Ana, 17th and Bristol
Thomas Guide (Orange County) page 829 in quad C-1
Comments: All bands HF to UHF and possibly a BBQ on Saturday
afternoon only.

Organization: Yorba Linda RACES Talk in on 146.895 -600 pl 136.5hz
Info Contact: Linda (KE6SPT) email: ke6spt@juno.com

Location: Water District Radio Tower/Yorba Linda, Exit Weir Canyon
at 91, go north 1/4 mile to New River and take to
Esperanza. Go east on
Esperanza and it turns into Hidden Hills Road. Go
up Hidden Hills 1/2 mile to Sky Ridge and make a left and
following it to Green Crest Drive. Make a left here and
go to the dead end cul-de-sac. Take the driveway on the
right and follow the small paved road to the large Radio
tower. Thomas Guide (Orange County) page 741 in quad A-3.

Comments: This is the YL RACES group first Field Day effort. They will
have all bands operating from HF to UHF.

Organization: Western Amateur Radio Association (WARA) Talk in on 145.400
-600
Info Contact: Dino Darling (KC6RIX) email: dinod@deltanet.com
Location: Walter Knott School, Southwest corner of La Palma and
Western
in Buena Park.Look for the antennas in the field behind the
school. Thomas Guide (Orange County) page 767 Quad H-4.
Comments:Chip Margelli K7JA from Yaesu USA will be operating HF CW and
using his Top contest skills to help WARA. Volunteers needed
to help operate various stations.

I can't beieve your on a university server and you are too stupid to even spell. CEILING repeat after me class. I had a qrm problem that I just rectified. I don't need any help or crap from two retards stuck on islands where they are miserable,namely you and your moronic buddy Jim. I don't know what they do out there in coconut land,but one more e-mail strike from you and your out. I df'ed this jerk qrm'ing to his door and only a borderline homo like yourself without a life would ever stick your nose in it. Why don't you troll somewhere else,and take that lying qrm'ing bastard K4YE with you. Excuse me, ex-qrm'ing bastard he has'nt done the deed in two days now.

> Parts where you may be licensed *do not apply*.

It's an interesting idea, but is that suggestion grounded in any rule
that you can cite? It's not self-evident from the text of Part 97,
which only tells us that: "The rules and regulations in this part are
designed to provide an amateur radio service having a fundamental
purpose as expressed in the following principles: ....". I do not
read anywhere that these rules regulate all transmissions on
frequencies which are available for use by stations operating in the
Amateur Radio Service. The fact that many of our frequencies are
shared with other services makes that idea even less likely to me.

If you did read that in a posting here, then an accurate quotation
would be in order. I had written that FCC employees were likely to be
no more nor less knowledgeable about the rules of their Department
than federal workers in other Departments. Does that translate into
a claim that 'the FCC doesn't know their own rules!!'? If you had
valid arguments against what I really did write you would not have a
need to distort my words.

Congratulations on making contact with the FCC on this matter. Your contact there writes clearly and carefully and I would urge you read what was written with as much care. S/He writes only that Section 97.403 is "based upon" the ITU Radio Regulations. I would guess that the Resolution itself is very vague and general and of no guidance to resolving this matter. Instead I would urge you to revert to your FCC contact and ask for answers to the precise question which we are discussing:

1) Does the the FCC grant permission to amateur radio stations to transmit outside the authorized frequency bands scheduled in 97.301 in connection with the immediate safety of human life and immediate protection of property and when normal communication systems are not available?

2) Is the FCC's permission to do this granted in Sections 97.403 and 97.405 or is it granted elsewhere in the CFR's?

and further to an email which you sent to me but which has not yet filtered here through the news system:

3) Do the words "these rules" in 97.403 and 97.405 refer only to the rules in Part 97 or do they refer to a broader body of Commission rules, including those in other Parts?

I believe that only by asking precise questions will we get precise answers. And I also believe that clear written answers to these questions will provide a valuable resource to all amateurs to defend their actions if and when when they find the need to act in this way.

ONLY AVAILABLE IN THE:
U.S.A, CANADA VIRGIN ISLANDS, AND PUERTO RICO

BE SURE TO GO TO OUR SITE AND CHECK OUT OUR FREE TRIAL.

Call everyone and tell them to throw away all of your old home, office, fax, pager, voice-mail, and cellular numbers and give them your New "Virtual Office" 800/888 number! The only number any one will ever need.

Are you tired of giving out all of your different phone numbers to everyone? Wouldn't it be nice to be able to give everyone just ONE phone number that will find you anywhere you are? Even out of town, or in a restaurant, or even on the golf course.

Now you can.

We have the answer to all your communication needs. It's called the "Virtual Office".

And this new service is loaded. It comes with features like:

An automated Call Attendant, Live Call Connect (in real time), Fax Sending, Fax Receiving, Even without a fax machine! E-Mail Notification and Delivery, Without a PC!, Outbound calling, Low Cost Long Distance Service, Inbound/Outbound 800/888 Number, Worldwide Call Transfer, Call Forwarding, Call Screening, Full Service Voice Mail, Nation Wide Pager Notification, Conference Calling, Speed Dialing, Auto Dial, Auto Messaging, Temporary Greeting, Unavailable Greeting, Password Protection, Pager Notification, and No Equipment or Software to buy, "Ever".

Priced from $9.95* per month, Plus 10.9 cents per minute per event.

That's less than one phone line would cost per month.

For more information please visit our web sight:
http://www.mynumber.com

* Based on our best priced plan.

5952. RX Mod for TH-28A Wanted

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-20 00:00:00 UTC
From: Dale Hochhalter <mcgyv@sd.cybernex.net>
Message-ID: <33AA2B3C.75E0@sd.cybernex.net>
Source record: 195341

I had noticed an old posting & was a bit confused.
It is about the Kenwood TH-28a

For the mod, you remove/cut Diodes D8 & D10 (and replace on in the D14 spot)

What I want to do is only the recieve Mod.
I saw posted on the net, to cut/remove Diode 9, to enable the wide band recieve
on UHF
(from 400-520) and from 360-400 by hitting F and Low.

Now here comes the part where I am confused....

If you remove/cut Diodes D8 & D10(and replace one in the D14 spot)then
why would Diode 9 have any thing to do with the mod? Or is this a type-O?

Hopefully there is someone out there that has a correct mod for this!!
All I'm wanting is the Recieve modified, NOT the TX.
Please E-Mail mcgyv@sd.cybernex.net if you know How the mod is done

Thanks in Advanced,

Dale Hochhalter

5956. WTB: Alinco EBP-10N battery (DJ-162/160/560)

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-20 00:00:00 UTC
From: <>
Message-ID: <33ac5dd1.706610@news.eunet.yu>
Source record: 195345

Hi!

Anybody has (or knows where I can get) EBP-10NA (7,2V/700 mAh) battery for old but still operating Alinco DJ-162TD, for sale? It doesn't have to be EBP-10NA, just any matching to above mentioned handheld which is 'compatible' with even older model DJ-160.

It could be new, or used but in good shape, or used with dead cells inside or even just plastic case of that battery (w/o cells inside). Also, I am interested for other accessories You might have for it. Please feel free to offer anything related to DJ-162TD.

Thank You very much in advance!

Slobodan, YT1RVS
<ljubisic@EUnet.yu.>

P.S. to avoid receiving those bulk junk mail messages, I've added one extra point at the end of e-mail address. Please have it in mind when replying. Thank You!

Eric,

Forgive me for my ignorance in this matter but, isn't this the same thing as cross-banding? We do that on 440-2m, 220-2m, and vice versa. Is there a legal issue involved with what your "friends" are doing? Obviously they have identified themselves properly or you wouldn't know they were hams.
As for what the lurkers with scanners might think... They're probably to busy scanning the cellular bands looking for juicy stuff. And if they are listening, well, you're always going to piss somebody off... That's just part of life...
What amazes me about your letter is that you complain about these people and the condition of the ham bands but, you won't do anything about it. That's just like looking out your window, seeing a young girl or boy being raped/beaten/robbed, and just closing your curtain. Why not send a letter to the FCC?? Or hell, if you can explain to me what they're doing that's illegal, I'll send the letter!!
I guess I live in a place where we don't have these problems. I've heard others talking about how bad the 2 meter band is with all the old CB'ers but, here, we don't have any problems like that. When we get somebody on the band talking offensively or abusively, we initiate a fox hunt and track him/her down just to let him/her know how we feel.
Well, it's up to you now... If you want my help, tell me...

<SNIP>

i had this trouble without a radio in a gm product.

the problem for me was the regulator? (inside the alternator)
apparently there is a "switch" that allows current to be directed
here or there. that "switch" (probably a diode???) was bad and allowed
the alternator not to charge much more than a "surface charge" and
remained open so that the battery drained EVERY night, even AFTER i
bought a new battery.

i'm sure there is a more accurate way to describe these events, but
i ain't that smart. nonetheless, ask around, there are folks who
understand the in's and out's of the automotive charging system.

The only problem with this post is that the SK's callsign is WA7NIY,
not N7NIY and his name is Mike Zussman. Mike's private services
were held yesterday near Phoenix with nearly 100 amateurs in
attendance.

To all radio amateurs

SB PROP ARL ARLP025
ARLP025 Propagation de K7VVV

Solar activity is still low. Although average sunspot numbers were up from 18.3 to 30.1 from last week to the current one, average solar flux was down to 70.6 from a low average of 73.1 the week before. Solar flux was below the 90 day average of 74 on every day over the past week.

The projection for this month shows the solar flux staying in the mid to low seventies. No geomagnetic disturbances are forecast.

Now that we are moving into the summertime propagation period, expect Sporadic-E layer openings on 10 meters through August. Because fewer people are using 10 meters now than at the peak of the solar cycle, many 10 meter openings may go unnoticed. While solar flux remains far too low to sustain reliable activity on 10, Sporadic-E skip does provide some interesting short and medium path length openings, with single hop propagation out to about 1,300 miles and multiple hop propagation to about twice that distance.

Sunspot Numbers for June 12 through 18 were 26, 27, 31, 29, 38, 31 and 29 with a mean of 30.1. 10.7 cm flux was 69.6, 70.1, 70.6, 70.7, 72.1, 69.6 and 71.2, with a mean of 70.6, and estimated planetary A indices were 6, 3, 3, 6, 5, 5, and 4, with a mean of 4.6.

Not really. Cross banding from one ham band to another is not
prohibited.

Is
> there a legal issue involved with what your "friends" are doing? Obviously
> they have identified themselves properly or you wouldn't know they were
> hams.

> Why not send a
> letter to the FCC?? Or hell, if you can explain to me what they're doing

I can't find anything specific in part 95 regarding the CB side of this
(but I didn't look very hard), but 97.113(e) prohibits an amateur
station from retransmitting signals emanating from any type of radio
station other than an amateur station (with some exceptions). In other
words, amateur stations are prohibited from retransmitting CB traffic.

There may be a loop hole... if you were using a phone patch. There are
provisions in part 95 that allow a CB radio to be interconnected for
phone patching. Amateurs can run phone patches as well. If all
requirements are met, I guess one could "cross band" CB to amateur via
phone lines. Kinda far fetched - I would be that what Eric is hearing
is being done legally.

Regards.

Problem is nobody does anything about the bums which in effect implies
their antics are OK which in turn increases the amount of garbage.
Eventually (sooner not later) Amateur radio will deterioate even
farther and become useless. Even now it is not much different than
CB was during it's worst of times. I take no pride in telling people
I have an amateur radio license.

PHASE 3D LAUNCH DELAYED TWO WEEKS

AMSAT Phase 3D officials remain optimistic despite another delay in the launch of the Ariane 502 that is scheduled to carry Phase 3D aloft in mid-September. The European Space Agency, ESA, announced this week that the Ariane 502 launch will be delayed a couple of weeks--until September 30 at the earliest--while the rocket gets another engine. It's the second delay announced this year for the Phase 3D vehicle. In March, the launch date was moved from early July to mid-September. AMSAT-NA President Bill Tynan, W3XO, remains philosophical about the schedule changes. "It's more of the same," he said. "We're trying to use all the time they give us productively."

Orbital Report On-Line said this week that a faulty component was detected in the liquid oxygen turbopump of the Vulcain engine due to fly on Ariane 504. Since the origin of the flaw was identified as a possible production defect and a similar element is known to be in the pump of the engine already mounted on the Ariane 502 rocket that recently arrived in Kourou, French Guyana, the European Space Agency and the launch consortium (CNES)

have decided to remove the engine and replace it with the one originally scheduled for Ariane 503, which features a component from an older production batch.

Any delay increases the overall cost of the project, but Tynan characterized the additional cost factor of the most recent delay as "noise level." He did not have a precise cost estimate. Tynan, who was at the Phase 3D Integration Lab in Orlando, Florida, said everything is going along well in the process. "The RF equipment integrated fine," he noted.

For more information on Phase 3D, including pictures of the assembly and integration process, see http://www.amsat.org/amsat/sats/phase3d.html.--Orbital Report On-Line; AMSAT

NEW MIR FREQUENCY EXPERIMENT TO END JUNE 23

For the third time in less than a year, the Mir FM voice and packet frequency changed again June 15. But even as it was made, the switch to 145.985 MHz simplex was being called "tentative" and "experimental." It also was controversial. As a result, Mir officially will end the worldwide "experiment" on 145.985 MHz as of June 23, but leave the frequency available as an option to the Mir crew only while Mir is over the US. Mir packet sysop Miles Mann, WF1F, said US astronaut Mike Foale, KB5UAC, now aboard Mir, can use "any channel he wants" when he's over the US, including 145.985, but he has to switch to 145.200/800 when Mir is elsewhere. Also, the radio will remain on the split pair when the crew is sleeping.

The Mir International Amateur Radio Experiment--MIREX--cited "numerous complaints from around the world" that the 145.200/800 split-frequency combination did not work very well as the main reason for trying 145.985. Last November, Mir changed from 145.550 MHz simplex to the split-frequency pair. "The radio has been almost impossible to use since November 1," said Mann, who called 145.985 MHz "an excellent compromise."

In a posting to the AMSAT bulletin board, John O'Hara, KB8TJX, in Wellsville, Ohio, reports he worked KB5UAC aboard Mir on 145.985 MHz for several minutes right after the changeover. "Mike said that it was working out a lot better for him also. He said he had trouble sorting out the voice contacts from the packet and that the duplex was also confusing to him," said O'Hara, who's AMSAT coordinator for Eastern Ohio, Western Pennsylvania and the northern panhandle of West Virginia.

When the "experiment" was announced, Mann had expressed the hope that if the 145.985 MHz channel worked much better, the Mir crew might be more inclined to get on the air than previously. Mann said the 145.800/200 MHz split-frequency operation suffered from interference from terrestrial users and drew widespread complaints from hams in the US, Japan and Australia (145.200 MHz is a repeater output or input frequency in many countries). He said the new frequency will reduce desensing of Mir's 2-meter station by commercial VHF activities taking place aboard spacecraft in the 143-MHz range. Mann said MIREX is working on a fix for the desensing problem and hopes to have it in operation by this fall.

A return to the 145.55 MHz frequency used previously by Mir was rejected because it's too close to a popular simplex frequency in Europe. Switching to 145.79 MHz also was out because it's in use by many semi-permanent packet operations.

Equipment aboard Mir includes a Kenwood TM-733, a PacComm Handi-Packet modem, a dual-band antenna, and a new, huskier power supply capable of powering the TM-733 to its full 50 W output. Mann said the output power typically is 10 W, however.

MIREX requests reports on the 145.985 MHz channel. Signal and interference reports go to Dave Larsen, N6CO, Box 1501, Pine Grove, CA 95665; e-mail doc@volcano.net.

LEAGUE FILES SPREAD SPECTRUM REPLY COMMENTS

Replying to comments filed in response to the FCC's plans to relax Amateur Radio spread spectrum (SS) rules, the ARRL has suggested that the Commission "arrived at a balanced approach" in its Notice of Proposed Rulemaking (FCC 97-10, released March 3, 1997). The Notice proposed to amend Part 97 rules to facilitate spread spectrum communication by means of additional spreading codes and the incorporation of automatic power-limiting circuitry. The League said the Commission's notice was "carefully crafted to accommodate competing interests," including more flexibility for ham SS operation and avoidance of problems with other users, including narrowband ham operation and unlicensed Part 15 devices. The ARRL had originally petitioned for the SS rules changes.

The comments were split among those who felt the rules changes were too liberal and those who felt they didn't go far enough. Among the recurring themes were issues involving the incompatibility of narrowband modes and SS on the same bands and the requirement for automatic power control (amateur SS operations are currently restricted to a maximum of 100 W output). Under the proposed rule, operation about 1 W would require provisions to reduce power automatically to the minimum necessary. Some commenters recommended that the FCC also permit in-mode station identification and permit SS emissions on all ham bands above 50 MHz. The League noted that concerns about possible SS interference with weak-signal and satellite work in the same bands were beyond the scope of the proceeding, because the Notice "does not propose to either increase power for SS emissions, nor expand the frequencies on which SS transmissions may be conducted." The ARRL said that because commenters cited no instances of interference, "there is thus no justification for imposition of additional restrictions on SS emissions." The ARRL filing added that informal band planning was the best approach to avoiding interference to narrowband users. The ARRL also deflected opposing comments of Part 15 users by noting that they "generally have no [legal] standing to object to Amateur Service rules changes."

The League urged the FCC to adopt the changes spelled out in its March Notice "without delay." The rules changes "will permit increased experimentation and continued protection against any increase in interference potential," the League's filing stated.

CONTACT FILMING INVOLVED COORDINATION, COOPERATION

Dave Finley, N1IRZ, of the National Radio Astronomy Observatory in Socorro, New Mexico, is looking forward to seeing the Warner Bros movie, Contact, due to appear in theaters this summer. That's because Finley and many of his NRAO colleagues were heavily involved in helping to bring the film to fruition--including a week of filming at NRAO last fall. "I've never been that big a movie fan," Finley said, "but I was impressed with the actors and the crew."

Finley also was impressed with Contact star Jodie Foster. She plays astronomer Ellie Arroway, who, as a girl, gets her ham ticket along with her father in the late 1960s, then goes on to become a radio astronomer and the first person to decipher a message received on Earth from extraterrestrial intelligent life. Eventually, she's among the team sent into space to explore the message's origin. The story is based on Carl Sagan's 1985 novel of the same name. Finley says Foster had done her homework on radio astronomy. "She's quite sharp," he said. But he doesn't think the experience was enough to entice Foster to get her ticket in real life.

Realism was a major goal of the filmmakers, Finley said. "They were a very professional group of people." The crew got in touch with NRAO very early on in the project, he said, noting that the first person to call them was none other than Carl Sagan himself. In the movie, the first signal is received at the Very Large Array (VLA) at New Mexico. "They used the actual VLA" in the movie, Finley said.

Finley, who served as the liaison between the film company and the observatory, called the week of filming "an intense experience." The potential of RFI from the crew's wireless mikes and communication gear was a big concern for the sensitive ears of the NRAO. The observatory also was not able to stop work to accommodate the filming, but the Warner Bros crew was able to work around the NRAO to get the shots it needed. "It was a different way of operating for both of us," he said. Despite the movie crew's "overwhelming presence," Finley said the encounter, like the movie's plot, "opened my eyes to a world I'd not seen before."

Filming in some locations was simply impractical. In one instance, WB completely and accurately replicated one of the facility's radio telescope control rooms in meticulous detail on another set. "When I walked up to their set, you would really think you were in the control room," Finley said. He hopes the same sense of realism carries over into the ham radio aspects of the movie.

The NRAO, which is run by the US government, gained from the experience too. In exchange for disrupting the observatory's maintenance schedules to get shots of the large arrays being aimed a particular way, Warner Bros reimbursed the government. In addition, WB gave money to the NRAO's educational fund to redo the visitors' center. "All of our visitors will eventually benefit," said Finley.

In addition to Foster, Contact stars James Woods and Matthew McConaughey. Robert Zemeckis directed the film. The ARRL provided the filmmakers with an

ARRL map and other League publications of the 1960s, while staff members supplied vintage QSLs and advised Warner Bros on the types of antennas and equipment they'd need to make the movie set realistic.

Contact is due out in mid-July. For more information, see http://www.contact-themovie.com.

ITU PROGRESS REPORT

During the week of June 9, ARRL International Vice President Larry Price and Technical Relations Manager Paul Rinaldo were in Geneva representing the IARU and ARRL, respectively, at the meeting of ITU Radiocommunication Study Group 8, which deals with mobile, amateur, radiodetermination and related satellite services.

Rinaldo presented his final progress report as chairman of Task Group 8/2, which has been dealing with wind profiler radars. He reported that the results of the group's work had been accepted by the recently concluded 1997 Conference Preparatory Meeting (CPM-97). Task Group 8/2 produced a new ITU-R report and three new recommendations, which have now been approved. While sharing could not be avoided entirely, it was possible to influence the choice of frequencies to minimize interference to the amateur and amateur-satellite services.

There was consideration of the structure of SG 8. The outcome was that the amateur services will continue to be part of Working Party 8A along with land mobile. WPs 8B aeronautical/maritime mobile) and 8C (radiodetermination) will be merged as WP 8B.

The new chairman of ITU-R Working Party 8D (mobile-satellite service), Takeshi Mizuike, of the KDD R&D Lab, is familiar with Amateur Radio. He will be dealing with technical studies related to Little and Big LEOs.

IARU raised the question of whether a special Task Group should be established to handle WRC-99 preparatory studies related to Radio Regulations Article S25, which has been assigned to Study Group 8. The question was considered to be premature, as the Chairman of SG 8 wants to wait until immediately after WRC-97 to decide how the Study Group will prepare for WRC-99.

Some European countries at the SG 8 meeting raised objections about ITU recommendations containing numerous national, regional or commercial standards. The subject came to a head over a draft recommendation on digital voice radio dispatch systems for land mobile. The issue demonstrated how industry has gained a stronger voice in ITU affairs in recent years. The debate over which standards will be included is to be passed to the 1997 ITU Radiocommunication Assembly, October 20-24, in Geneva.

CALL FOR PAPERS

Papers are invited for the 16th annual ARRL/TAPR Digital Communications Conference, set for October 10-12, 1997, in Baltimore, Maryland. Anyone interested in digital communications is invited to submit a paper for

publication in the Conference Proceedings. Presentation at the conference is not required for publication. Papers are due by August 20, 1997 to Maty Weinberg, ARRL, 225 Main St, Newington, CT 06111; e-mail lweinberg@arrl.org. Paper submission guidelines are available at http://www.tapr.org/dcc.

For conference details, see http://www.tapr.org/dcc or contact the TAPR, Tucson Amateur Packet Radio, 8987-309 E Tanque Verde Rd No 337, Tucson, AZ 85749-9399; tel 940-383-0000; fax 940-566-2544; e-mail tapr@tapr.org; http://www.tapr.org.--Greg Jones, WD5IVD

OL' SOL STILL LAID BACK

Propagation pundit Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity is still low. Although average sunspot numbers were up from 18.3 to 30.1 from last week to this, average solar flux was down to 70.6 from a low average of 73.1 the week before. Solar flux was below the 90 day average of 74 on every day over the past week.

The projection for this month shows the solar flux staying in the mid to low 70s. No geomagnetic disturbances are forecast.

Now that we are moving into the summertime propagation period, expect sporadic-E layer openings on 10 meters through August. Because fewer people are using 10 meters now than at the peak of the solar cycle, many 10 meter openings may go unnoticed. While solar flux remains far too low to sustain reliable activity on 10, sporadic-E skip does provide some interesting short and medium-path length openings, with single-hop propagation out to about 1,300 miles and multi-hop propagation to about twice that distance.

Sunspot numbers for June 12 through 18 were 26, 27, 31, 29, 38, 31 and 29 with a mean of 30.1. The 10.7-cm flux was 69.6, 70.1, 70.6, 70.7, 72.1, 69.6 and 71.2, with a mean of 70.6, and estimated planetary A indices were 6, 3, 3, 6, 5, 5, and 4, with a mean of 4.6.

DENNIS J. CATON, KF0JT, SK

Dennis Caton, KF0JT, of Black Forrest, Colorado, died June 5 after a long illness. He was 61. A native of England, Caton authored the popular UP/DOWN program that many hams use to calculate uplink and downlink frequencies of analog satellites. He was an ARRL member and a long-time AMSAT supporter and satellite enthusiast. He once served AMSAT's coordinator for activities at the Air Force Academy. Caton was retired from IBM. His wife and two grown children survive. Services were June 11. Messages to the family may be sent care of Jim White, WD0E, e-mail wd0e@amsat.org.--Jim White, WD0E

RICHARD S. ROBINSON, K1JRW, SK

Well-known VHF DXer Rick Robinson, K1JRW, of Shutesbury, Massachusetts, died June 14. He was 77. An ARRL member, Robinson was one of the first VHFers to earn his DXCC on 6 meters (he held DXCC No 12). "He was a vigilant watcher who was always glad to alert others to band conditions and share news of interest. This upcoming cycle won't be quite the same without Rick," said Ron Klimas, WZ1V. A daughter survives. A service was held June 17.--Ron

Klimas WZ1V

IN BRIEF:

* This weekend on the radio: The Kid's Day Operating Event, All Asian DX Contest (CW), and SMIRK QSO Party are scheduled for this weekend. See June QST, page 103 for details.

* Correction: A report in The ARRL Letter, Vol 16, No 24, on the upcoming STS-94 SAREX flight contained a typographical error. The story should have said: "QSLs go to ARRL EAD, STS-94 QSL, 225 Main St, Newington, CT 06111-1494. Include the following information in your QSL or report: STS-94, date, time in UTC, frequency and mode (FM, voice or packet). You must also include a business-sized SASE."

* ARRLWeb catalog updated: The ARRL Web catalog has added a new product category, "Public Service." It houses four of the Field Service Department's public service manuals (no shipping charge for domestic orders of these items): ARES Field Resources Manual (#5439), $5; Special Events Communications Manual (#FSD4), $5; Emergency Coordinator's Manual (#FSD9), $5; and Public Service Communications Manual (#PSCM), $1. The New Products page was updated to include some new items, and current availability info. New products added include Radio Amateur Callbook CD-ROM; Tech Class Video Course (shipping later this summer); ARRL MicroSmith ver 2.3 (#4084) (the latest version of the popular Smith Chart simulation program) and RadCom CD-ROM (1996). The "Products by Title" listing provides an alphabetical listing of all ARRLWeb catalog items. For more, see http://www.arrl.org/catalog.--Bob Inderbitzen, NQ1R

* Video Library Vol 9 available: The Educational Activities Department has readied the ninth volume in its Video Library series for sale to clubs and individuals. Volume 9 is called "Amateur Radio History" and contains these three programs: 1935 Tour of ARRL HQ (15 mins, narrated by retired League staffer George Hart, W1NJM), The Trans-Atlantic Tests and Station 1BCG (28 min, produced by the Antique Wireless Association), and An American Inventor--Major Edwin Howard Armstrong (50 min, produced by the Antique Wireless Association). The price is $12 (shipping and handling included). To order, call Jean Wolfgang, WB3IOS, 860-594-0219.--Rosalie White, WA1STO

* SAFEX is back: The SAFEX 70-cm repeater aboard Mir is back in service. Receive (downlink) on 437.950 MHz and transmit (uplink) on 435.750 MHz. The CTCSS access tone is 141.3 Hz.--SpaceNews

* W0TX special event: The Denver Radio Club is operating special event station W0TX as a special event station to mark both the club's 80th anniversary and the Group of Eight economic summit in Denver this weekend. Operation is on or about 3937, 7237, 14237, 21237 and 28337 kHz on SSB and on the lower end of the General class segments on CW. Operation will continue through Monday, June 23, UTC as bands are open. A commemorative QSL card is available. Send QSLs to Box 44173, Denver, CO 80201.--Lys Carey, K0PGM

* Colonel Palm? Due to the efforts of Kentucky SM Bill Uschan, KC4MIS (who was at HQ last week for a Section Manager Workshop), ARRL Field Services Manager Rick Palm, K1CE, was made a member of the Honorable Order of Kentucky Colonels by Gov Paul Patton. This is the highest honor awarded by the State of Kentucky. Palm received a handsome proclamation personally signed by the Governor and the Secretary of State. What he did to deserve this is a total mystery, but it was a nice gesture by the Kentucky SM and will look good on the blank wall of Palm's office. (Other luminaries among the Kentucky Colonels are Lyndon Johnson, Winston Churchill, John Glenn, and Bing Crosby--and now our own Colonel Palm). For more information on the Honorable Order of Kentucky Colonels, see http://www.physics.ohio-state.edu/~ltf/larkern.html.

* Forum set on new licensing system: The FCC has scheduled a public forum to discuss the Wireless Telecommunications Bureau's plans to replace its ten separate licensing-application processing systems with a single, integrated system and database. The new system--the Universal Licensing System or ULS--is projected to be on-line next year. Goals include expanding electronic filing capabilities and speeding licensing. The forum will be July 8, 10 AM, at the Commission Meeting Room (Room 856), 1919 M St NW, Washington, DC.--FCC

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs.

* The HIRAM BBS: 860-594-0306.

* The ARRL Technical Information Server (Info Server): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message

body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

I'm thinking about beginning study and learning code for the Novice license. I have the following beginner questions:

1. What books do I need to study? Any that can be downloaded?

2. What resources are available on the Internet?

3. How long should it take me learn the code part, assuming I'm an average student?

4. Once I got my license, what would be a good beginners rig for an apartment?

Thanks,

-Dan

Marty,

As I remember the 757 battery is about 1" long and 3/8" diameter that is soldered in. The only source I've found is Yaesu and they are reasonable on price. The entire board has to be removed to get to solder pads. While you are in the rig it would be a good idea to spray the controls with contact cleaner, tighten PCB mounting screws and do a general cleaning if needed. Oh yes, there are zillions of connectors to remove before you can lift the board so make a diagram first. Watch those rear top cover mounting tabs too - they are easily broken off.

Good luck. If we can help just EMail. Have a nice day and enjoy the 757 as it's a great little rig!

73

Morse uses variable length coding. This is a crude form of data compression,
and as such makes Morse *more* sensitive to channel errors rather than less.
This is true for any compression scheme. That's because each symbol carries
more information, and thus more information is lost if the symbol is damaged
in transmission.

Morse is a quintenary code, IE it has 5 distinct symbols which must be detected
and identified. They are the dot, the dash, the intracharacter space, the intercharacter
space, and the interword space. Using OOK, only two of the symbols are expressed
by transmitted signal energy, the other three have to be *inferred* against channel noise.
This costs 3.98 db compared to a modulation which transmits energy for every symbol.

Because the symbols are of different lengths, a matched filter cannot be created for
the communications channel conveying them. This costs between 4.77 db and 6.99 db
depending on the sequence of symbols being currently sent compared to a uniform
code.

Thus OOK Morse pays a cumulative penalty of between 8.75 db and 10.97 db compared
to a uniform binary coding which uses signal energy for every symbol.

ASCII is a 7 bit code which has two symbols, mark and space, which must be detected
and identified. Both are transmitted by signal energy (FSK modulation). And the symbols
are orthogonal, IE the absence of one implies the presence of the other, and the presence
of one implies the absence of the other. Taken together, this gives FSK ASCII a 6 db
detection

advantage over OOK. The symbols are also of uniform length, which allows a matched filter to
be generated for them, that's a minimum of another 4.77 db advantage. Thus, FSK ASCII has a minimum cumulative advantage over OOK Morse of 10.77 db.

It's actually better than that because Morse operators don't use filters which approach optimum SNR because such filters would give the symbols a raised cosine response, and that would make them hard to decode by ear, IE the odd order harmonics which give OOK symbols their squarewave character would be stripped off, making the code sound blurred to the human operator. Harmonics up through the fifth are generally acknowledged as required on a noisy channel for reliable decoding by ear. That means the minimum usable filter bandwidth is 5 times as wide as necessary, another 6.99 db loss for manual Morse.

Now variable length coding does have some advantage. Using the PARIS standard, Morse requires 1.64 db less transmitted power to send a given message than ASCII when using equal modulations, IE both OOK or both FSK (yes Morse can be sent FSK, and was in the early days with alternator transmitters which couldn't be keyed on and off, and RTTY was sent using OOK before amateurs were permitted to use FSK). But the impairments of using a variable length code with non-uniform symbols conveyed by on off keying outweigh this small advantage.

Net there is still a 16.12 db advantage for FSK ASCII over OOK Morse when sent at the same WPM. Note that the only reason OOK Morse does as well as it does is that it is normally sent *much* more slowly than other text transmission methods. But adaptive digital methods can change speed as required, even down to speeds Morse operators can't handle.

It has been shown (master's thesis University of Stockholm) that the human ability to copy Morse in noise falls off sharply as speed declines below 5 WPM. But machine methods can easily handle individual bit times of 100 seconds or more. This translates to a *huge* SNR advantage. Using integrate and dump techniques, SNR improves in proportion to the square root of the ratio of the speeds used, IE for 5 WPM Morse, average symbol duration is 312.5 milliseconds, but FSK ASCII can easily work with symbols of 100 seconds duration, so 10*log(sqrt(100/0.3125)) = 25.05 db advantage for the slower transmission. And the 16.12 db advantage noted above still holds too, so the cumulative advantage over manual OOK Morse at 5 WPM would be 41.17 db.

Now note well that this is *before* we add any FEC coding gain. This is just the advantage for the raw signaling channel. FEC coding can yield another 25 db or more. But the "human DSP" can do some adaptive filtering and some crude FEC too. And our digital demodulators and coders are not ideal, nor do we want to run with symbol durations of 100 seconds. So the real world advantage of FEC coded FSK ASCII over OOK Morse is not 66.17 db. In the 5 WPM to 20 WPM speed range, the real world advantage is only about 9 db. This is shown in the relative Eb/No performance of the two methods, with Morse at 13 db Eb/No and digital at 4 db Eb/No. As speeds increase or decrease outside that range, however, the digital system's real world advantage grows. For example, at the 1100 WPM top speed of Clover, the digital system's advantage becomes infinite since no Morse operator
can copy at that speed no matter what the SNR of the channel. And at the 100 second symbol durations of the Lowfer system, the advantage similarly grows to infinity because manual Morse operators can't integrate symbol energy in their heads over that long an interval.

>2. What digital format are you comparing for the 4 dB Eb/No number and
>at what error rate for both? I am assuming that to acheive the 4 dB in a
>digital system you will need quite increased bandwidth for the FEC
>information and that can lead to enormous coding gains.

I'm working under the assumption that solid copy is required, IE an uncorrectable error rate of zero. Manual Morse operators can't achieve that at all for sure because there are a number of channel impairments which could masquerade as valid symbols, and there's no way for the receiving operator to tell them from actual valid symbols. Context guessing doesn't work when the sending operator may have misspelled the word, IE the misspelling is the *correct* copy, and context guessing would result in a copy error. But the operator may have spelled it correctly and a channel error turned it into a misspelling. There's no way for the receiving operator to know if he has 100% correct copy. By contrast, digital systems have a number of error detecting and error correcting methods available which allow proveably correct copy.

>3, How do you figure Eb in a Morse system? Won't it depend on your
>sending speed? Ok, if it is the same as C/N, what bandwidth are you
>assuming? Morse detection by the Human ear can operate in negative C/N
>conditions for a given bandwidth. Also the bit length is modulated (dits
>and dahs), how is that accounted for?

Eb is the energy per bit. Eb is simply the average received power divided by the number of active symbols per second. If you work out the dimensional analysis, that gives watts*sec/symbol, which is what Eb is. The dot is the basic time unit here. A dash is treated as 3 dots run together. The "unvoiced" symbols, the three space symbols, are valid and necessary parts of the code even though they have no transmitted energy. They have to be inferred against the noise background by the absence of the dot or the dash. So they aren't counted in the symbols per second used for the purpose of determining Eb.

No is the noise power in the information bandwidth. The information bandwidth is simply the inverse of the bps for the channel. We can approximate that to be the same as baud in the case of OOK Morse. For 20 WPM Morse, that's a bandwidth of 8.33 Hz. Note that this is *not* the same as the receive filter used on the channel, which would typically be 250 Hz for 20 WPM Morse. The information bandwidth is the minimum bandwidth theoretically necessary to pass the information. In practice we can't reach that ideal with manual Morse because the operators need the harmonics which shape the code elements, and real world filters ring (DSP filters don't, though). But an ideal decoder wouldn't need those harmonics, and would be delighted with a raised cosine signal.

Note that Shannon says it is theoretically possible to operate at an Eb/No of -1.6 db (but no lower, no matter what we do). We don't know how to do that in practice. No manual Morse operator can even approach it. The best weak signal operators can get down to about 13 db Eb/No. Machine methods have gotten down to 4 db Eb/No.

>4. On the digital systems that work when Morse cant be detected, you are
>right about that, but the sending speed is way slow which allows them to
>integrate the Eb for a looooong time. This is what NASA use for
>interplanetary space craft pictures.

Voyage and Galileo were operating at 40 bps, about 68.57 WPM if they had
been using synchronous ASCII with the PARIS standard word. The lowly
amateur P-38 card has demonstrated solid copy at 60 WPM on signals
which weren't reliably detectable by ear. That was reported in the QST
review, and I've experienced the same thing many times on the air.

My little experimental I/Q radio, operating at 10 mW on 20m, has demonstrated
performance of better than 10 db Eb/No on a consistent basis on single and double
hop paths. And it is a crude hack costing under $120 (and I'm working on cutting that
down by at least half). That's 3 db better than a manual Morse operator can normally
do. It is often providing solid copy when I can't hear the signal it is copying. It
normally
runs at 10 bps, about 18 WPM, but can drop down to 1 bps or 0.1 bps if necessary.
Now 0.18 WPM doesn't sound like much, but everyone else has declared the band
dead at that point and gone to bed while it is still patiently communicating.

>I'm not throwing stones here, I just don't understand the numbers fully?
>I'm not a fan of Morse in Ham Radio so I don't use it, but I do relize
>there are some advantages in noisy signal enviroments. I'm just
>interested in the math, not a debate on Morse tho.

Fine. I'm not a Morse fan either, though I used it extensively in the Vietnam
era handling traffic for our servicemen. It usually is better than SSB voice
on impaired channels, but that's faint praise indeed. There are *much* better
methods of transmitting text via radio available to us today. Many of them
are quite cheap and easy to implement.

Note that coherent CW offers some of the advantages of some of the methods
I've mentioned, but it is still burdened with an irregular quintenary code and on
off keying. Thus it can never do as well as systems using more optimally designed
codes, symbol spaces, and modulations.

I'd also note that HF is a particularly interesting place to do very weak signal work.
The variety of propagation enhancements and impairments presented to the designer
make it much more challenging than the simple gaussian noise environment of VHF+.

Go to Radio Shack - they have the 6 pin molex plug -do it yourself for
about $1.89. I have used them on ICOM and Motorola equipment. Be
careful when you crimp the wires and I recommend soldering them after
crimping.

"50 Years of the ARRL" (written in the early 60s) is also an excellent source of our history.

Both the above books are about $5 each. Excellent reading and excellent bargains.

Check out r.r.swap for folks selling back issues of early QST magazines. That periodical monthly documented radio history as it was being made.

Another great book is "The History of QRP in the U.S.", by Adrian Weiss. It's out of print but I found a copy in our public library.

I've always thought a study of our history should be a prerequisite to obtaining a license.

OK, the FCC came back with the 'answers' everyone have been waiting for:

:Subj: Re: Emergency transmission questions -Reply -Reply
:Date: 97-06-19 12:30:24 EDT
:From: JJOHNSTO@fcc.gov (John Johnston)
:To: RPD910@aol.com

:Thanks for the inquiry...

:There has been no change to the Commission's ruling that amateur
:operators should decide for themselves whether or not their stations
:should transmit certain types of communication using the four
:standards in CFR Section 97.113. See Report and Order in PR Docket
:No. 92-136 adopted July 15, 1993, 58 Fed. Reg. 43071, August 13, 1993;
:8 FCC Rcd 5072 (1993).

:In summary, any amateur-operator-to-amateur-operator communication is
:permitted, unless it is:
: 1. Specifically prohibited, or
: 2. Transmitted for compensation, or
: 3. Done for the pecuniary benefit of the station control operator,
:or
: 4. Done for the pecuniary benefit of the station control
operator's
:employer.

:Also considered was a request to develop and maintain a list of
:anecdotal examples. The FCC, however, declined to devote staff
:resources to such a project. In summary, there are two reasons:
: 1. There would have to be thousands of examples.
: 2. To maintain a list would necessitate that the FCC intrude upon
:the day-to-day functioning of the amateur service to a far greater degree
:than is desirable.

:There is a FAQ on amateur service communications on the FCC's web
:site.

OK, they have completely ducked the whole line of questioning :)

TONY,

Was reading back through the entire thread, and I seemed to have missed one of your replies regarding the point you are so adament about, about the out of band transmissions to other services.

>Somewhere there are laws which achieve two things: 1) they give the
>Federal Government, through the FCC, sole authority to the exclusion

>even in dire emergencies, by anything written elsewhere in Part 97.

It appears you and I are really in total agreement on several points, just going about it in different lines of thought - We both appear to agree on the fact that in an emergency, transmissions IN AMATEUR RADIO SERVICE are permitted anywhere. The FCC has really backed up the entire line of reasoning by the response to my email, stating
amateur-operator-to-amateur-operator comunication.
The only problem left is the statement in the FAQ section of the FCC that is:

>Q. What types of two-way communications are amateur stations specifically
>authorized to transmit?
>A. Section 97.111(a) provides for two-way communications. In summary,
>amateur stations are authorized to exchange messages with:
>2. A station in another FCC-regulated service while providing emergency

>communications;

That appears to give permission for the transmission of amateur stations with another station in a different FCC-regulated service. I will now have to go read the referenced PR documents, if I can find them, and see what they say.

> Tony EI6EQBMost radios are 50 ohm out, so you must be running your ladder line thru
a balun, or tuner, or both. Therefore you run the line to your MFJ 259
in the same way you were going to run in to your transmitter.
I saw an article in QST (Sept 1996 i think) that had bunches of
suggestions on using the mfj with impedences other than 50 ohms.
Anyway..original question... run it thru a tuner just like you would
to your radio.

> I have an ICOM VHF radio that is in need of a 3SK97 dual gate MOSFET.

In my old ECG replacement book it equivalent to ECG222 and data are as follows:
dual gate MOSFET, N-channel, transconductance 12000, NF 6dB at 200MHz, Vgs(gate to source cut off voltage) 4V, Idss 5 to 35mA, Gate to source breakdown voltage 20V, input capacitance 6pF,transfer capacitance 0.03pF, Pd 330mW.
Package TO-72 and terminals (looking from the bottom, cw, starting at the tab): D,G2,G1,S/case.
As a replacement you can use BF981 , BF982, 3SK122L, 40673 do not have my Motorola RF Hnadbook handy, so don't know any modern devices that you can use. If you need more info, e-mail me directly,

Without copying the whole message I wonder, If the code ended up with Trellis characteristics (we all know that it didn't), how would it have changed the numerical analysis presented at length here. (Trellis coding would have set a fixed character length, used more than the minimum baud to convey a character, and would have had some error detection via illegal code to code transitions.)

Before the flames start, I'm not strongly on either side of this fence. As a matter fact, I carefully avoid both sides of the fence.

>Can anyone help, Do you know how to use an MFJ259 feeding into 300 ohm
>or 450 ohm Ladder line feeder to an antenna.???
>any info at all would help
>please post and e-mail me .. tonyfay@indigo.ie

First, I'm assuming that you're using the MFJ 259 to tune up an antenna. With 450 ohm line, you can rig up a 9:1 balun, and go from there. 9:1 baluns aren't common, but I'm sure you can find someone on here willing to tell you how to wind one. I wound three using a magazine article a long time ago, and couldn't easily duplicate what I did then. With 300 ohm lead, probably your best bet is use a 4:1 balun. Most modern transceivers are set up to run 50 ohms nominally, so making use of a balun with the MFJ is probably the best bet. Remember, the point with the 259 isn't to get a perfect match, but rather something that works. There will still be some mismatch with the 300 ohm line, but hopefully, you can still get some idea of what you're facing. Alternatively, you can try using a wattmeter with forward & reflected power and figuring out the SWR, but the 259 with a balun is quicker, and usually about as accurate.

Hello there .

I am looking for some information an cavity filters and duplexers.
Does someone have some details on building a cavity ??

Especially .. how is the coupling done ? Should I use capacitive
or inductive coupling ? What is less sensitive in terms of efficiency
and loo ?

I would apreciate any comment on this subject .. especially
if you have detailed plans on building such a filter for
440 or 145 MHz ..

tnx es 73 de ac5mv,dl8ser

Message-ID: <01bc7e26$233a1f80$95a983d0@default>
Source record: 195302

Hello,

I bought a TX that only had a built-in antenna. I am attempting to put it in a new chasis.
I want to add a S0-239 on the new box for an External antenna. My question is what should the "ground" part of the connector should be connected to. As I see it... Im thinking that I'll remove the antenna and and a solder in a jumper from the antenna to the center of the connector. Then should I solder the ground of the connecter to the Negative or ground of the circuit. Like at the point where the negative power wire is put in. Another question is that I noticed in many TX's a capacitor or resistor before it hits the antenna. I figured that was for protecting the TX. What are they used for? Thanks again for your time.
Sorry if it seems like such a novice question.

Hi,
As a high school applied physics teacher and electronics instructor I am amazed at the lack of arithmetic skills in 10, 11, and 12th grade students. I've been at this for 8 school years now and the situation seems to have worsened. They cannot accomplish simple linear equations reliably. The "why" of this has eluded me, as the emphasis seems to have been on math and other "basics" since "new math" was effectively done away with (in California) about 10 years ago. I have to spend about 8 weeks at the beginning of every year teaching primary algebratic functions, linear equations etc. I frustrates me and creates the situation of me being unable to teach the subjects I'm hired to do.
Answers? Examples?
friend,
Lute

Ben,
I believe the companies name is RF CONNECTORS and they did have a web site...search the I-Net Yellow Pages at C-NET you'll find them or another.
friend,
Lute

6040. ## ET3YU - LOOKING 4 QSL MNGR

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-21 00:00:00 UTC
From: dragans@eunet.yu
Message-ID: <5ogi0l$fq3$2@SOLAIR2.EUnet.yu>
Source record: 195309

Hello and TNX for reading this.

I'm looking for the QSL manager who will handle the QSL cards for my ET3YU operation.

I was trying to manage QSL-ing but unfortunately I can't manage it any more. It takes time which I don't have.

The person has to have experience as QSL MNGR and he/she must have a valid QSL card exchanged with me. Must have an Internet access.

I'll supply the LOG with all necessary information including the current QSL status. As ET3YU I had more then 14.000 QSO's and have exchanged about 3.000 QSL's.

I'm planing the trip to ET again, that will last about 2-3 weeks, sometimes in October/November. In that matter I'll be glad if the MNGR could manage support. Everything is still sketchy.

Looking forward to hear from you.

Regards,

Dragan Stojanovic <> dragans@eunet.yu

J Edgar Hoover was also vocally homophobic, but was in fact a closeted homosexual and transvestite. That's a fairly typical behavior of closeted sexual deviants. The old saw of "methinks he doth protest too much" is often true.

That doesn't make O'Brien's charge against you true, of course. You could be the raving homophobe you'd like us to believe you are, but it makes your defense less credible. Sexually secure people don't have an obsessive need to rave about sexual deviance the way you often do.

And even if you were president of Lambda, and a charter member of Act Up, it is still a cheap shot on the part of O'Brien to bring that into this forum.

>
>So what.

The so what is that the user community who would form the other half of your contact is resistent to using the technology required. That would leave you talking to yourself unless you can organize a fairly large group of people who want to use the method you've chosen. Doing that is much harder than deploying the appropriate technology.

>>The 4 db figure comes from actual
>>practice used with Voyager, Galileo, and other deep space probes.
>
>Same as in CLOVER: if transmissions are quite long, it works well and
>efficient, but for quick information exchange, the protocol overhead
>becomes a problem.

The alternative is endless resends in an attempt to overcome channel errors. Shannon showed that no number of plain resends can guarantee correct copy. But use of ECC or FEC techniques can do so in finite time if a contact is possible at all. So for very weak signals, better digital techniques will achieve a contact where other methods will fail. When conditions are better, digital techniques like Clover can speed up transmission rates sufficiently to overcome the protocol overhead.

For example, under conditions where the Morse operator can maintain 20 WPM error free, Clover can do the equivalent of about 1000 WPM error free. Any protocol overhead is easily absorbed by the higher effective transmission rate even if you are only sending a few words. For example if the message is only 20 words, the Morse operator needs a minute to accomplish the transfer. Clover only needs 20/1000ths of a minute to do the same, leaving the other 980/1000ths of the minute for protocol overhead. Since the protocol overhead isn't that great, there is a net win for Clover.

There may be a grey area somewhere betwen those extremes where conditions are such that protocol overhead may cause Clover to be a net loser, but I haven't experienced it.

>>Karn has demonstrated a Fano decoder which works with amateur satellites,
>>whose signals suffer spin modulation, doppler, and Faraday rotation of the
>>signal path.

>
>No dobt there will be progress in the future.

That decoder already exists. It isn't in the future, it is *now*. You can download it off his website right now if you wish. Similarly, Clover and PACTOR II implementations are *now*, not something which may appear in the future. Certainly even better things will appear in the future, but we don't have to wait for them to beat Morse operation. Things which are available right now can do it easily.

>>In other words, you're saying the contacts are contentless. While I agree
>>with that, it ignores the issue.
>
>Did I? if a contact lasts a minute, and callsigns, locators and numbers
>are exchanged, regarding this as contentless is just your personal
>opinion.

It certainly is, but I'd hope it is the opinion of any thoughtful person. What you're describing is simply ping-ack. That's trivially accomplished by any automatic system. It doesn't convey any substance. No human thoughts have been expressed. No real exchange has taken place between the people making the contact. It is the stuff of mindless automations. I suppose that if you want to emulate a modem, you might want to emulate a ping-ack exchange as well, but it seems a rather empty formality.

That is not a standalone statement. Read the rest of 97.111(a). They're talking about government and non-government stations attempting to communicate with amateurs (see example of contacts with military stations for the Armed Forces Day Communications Test). Normally, an amateur station is only allowed to communicate with other stations licensed in the amateur service, as noted in 97.111(a)(1).

97.111(a)(2)(3)(4) make exceptions to this general rule. But the idea is so that amateurs can legally respond to such stations, transmitting on an amateur band. I believe the idea behind 97.111(a) is to permit amateurs to work non-amateur stations in particular circumstances, but I don't believe that it permits amateurs to leave the amateur service in order to do so. For example, during the Armed Forces Day activity, amateurs still aren't allowed to fire up on any military frequency and call military stations. They have to work military stations on amateur frequencies.

> does this mean?

MARS is Military Affiliate Radio System. To read all about it see URL:
http://www.dxer.com/mars.html
They operate near the Ham band frequencies. Requires membership in MARS.

A Quote from an FAQ

"What are Army MARS Frequencies?

Frequencies used in the Army MARS program are those assigned by the
Joint Frequency Panel from U. S. government frequencies allotted to the
military services. Frequencies are assigned to MARS throughout the High
Frequency (HF) spectrum and selected frequencies in the VHF band.
Because Amateur Radio equipment is limited to operation in the Amateur
bands,
minor modifications are needed to work the MARS frequencies. Many MARS
frequencies lie close to the Amateur bands but never inside the Amateur
frequencies. "

CAP is Civil Air Patrol. Go to URL: http://www.hotbot.com/
type in Civil Air patrol --- get numerous web pages regarding same. A
CAP frequency page is at:
http://www.li.net/~j4dice/scanning_info/civair.html

All of these were found using URL: http://www.hotbot.com/

I don't know what the law is in th states but that seems sensible, IF
you were to crash over the Rockys and every one else was injured, is
every one saying legaly you can't pick up the mic on 121.5 and call
MAYDAY? I think not, if it does then the law is an ass! In a emergency
then you have to be able to use any means to save lives.

6056. Re: Uniform State Identification Card law

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-21 00:00:00 UTC
From: Jack Swift <jswift@up.net>
Message-ID: <33AC539C.4B8@up.net>
Source record: 195325

we just had an airport mock disaster. as dave noted less people showed
up than we wanted. however we didn't have the id cards in place and some
of the hams were (properly) held at the roadblock until we passed
clearances over the police radio. the county office of emergency
measures anticipates using the id cards to give 'authority' to selected
individuals so they can not only get through roadblocks but authorize
access for others and even delegate their authority. the 'ordinary' ham
wouldn't need a permanent card and wouldn't have to take any more
courses and tests than he's already had. someone with a 'permanent' card
would issue 'temporary' cards.

6057. Morse Code Trainer Software for OS/2?

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-21 00:00:00 UTC
From: kd6pdz@NOSPAMpobox.com
Message-ID: <33ac5517.28e7@NOSPAMpobox.com>
Source record: 195326
Cross-posted to: rec.radio.amateur.misc,comp.os.os2.misc,comp.os.os2.apps,misc.misc

I'm wondering if anyone has written any Morse code training software specifically for the OS/2 operating system. I've tried Super Morse running in a DOS box under OS/2 and it sort of works, but it's almost impossible to get the speed calibrated properly. Being a DOS-based program, it apparently expects to have exclusive use of the CPU.

Something written in native code OS/2 would be nice, or even something written for Unix with source code available could probably be ported to OS/2. Does anyone know of anything like that?

John Mouw (jmouw@grtk.COM) wrote:
: Can anyone point me toward a ham radio newsgroup?

AFAIK, there isn't one. Even years ago, back before the 'net
became so big and we did this stuff on hobby-run Fidonet lines,
the ham echos had noisy jerks and flames and idiots. In fact,
at least one of those idiots is still around and a regular here. :-)

It strikes me that out of a hypothetical 1000 hams, if you run
into them on the air or at a hamfest, about 2 will be obnoxious
jerks. On the wire-bound services, it seems to rise WAY into
three digits for the same 1000-ham group.

Oh, you still run into nice, helpful, friendly folks on the
ham newsgroups. It's just hard to follow their threads with
all the Fart Bishers and Spews smearing their figurative feces
on the walls and banging their spoons on the highchairs. :-)

Actually this is not such a crazy argument...

Even though an UPS is a superset of an inverter, there are different design considerations in each case. In a very competitive market products are designed (at least by honest firms) to JUST meet their specifications. Any overdesign represents lost profit.

A stand-alone inverter is assumed and usually specified for a surge and a continuous power rating, but the inverter in an UPS is specified for short
term usage, the life of the batteries. Frequently UPSs do not have published
"surge" ratings even though most certainly have the capability to drive higher
loads for short periods without going into overload trip.

The semantical argument carries weight in this instance.

Solar had nothing to do with it. I only meant to comment that the rig
usually has 12V on the power input leads.

Hi Dan, just got my liscense several weeks ago. I found a local club that was forming classes Wednesday nights for two hours a night and lasting ten weeks. They used books available from Radio Shack, authored by Gordon West. They also had code tapes available for loan. This might be a good route to take. I found that being in a group seemed to motivate me to attend and to study. I did find that MORSE-MAN software was helpful in learning the code. There is a downloadable program available called Nu-Morse. Its a shareware program and runs over Windows 3.1. Hope this helps.

QST de W1AW
ARRL Bulletin 35 ARLB035
From ARRL Headquarters
Newington CT April 5, 1995
To all radio amateurs

Read the above.
Are ANY ARRL bulletins (except the propagation report) not from ARRL
headquarters? Does Newington have to be on each one? Are ANY bulletins
addressed to any one OTHER than "To all radio amateurs?" Why does the
ARRL and hams in general use 1000 words when 100 will do? Aren't we
"into" communications?

The F.C.C. said the following:

''The amateur service community in the United States generally
considers the current telegraphy speed requirements as necessary and
appropriate,'' the FCC said.

Who the hell is running the FCC, the hams or the government? The FCC is
using as justification for keeping CW the fact that hams want it. Can't
the FCC make a decision for the public good and merely consider the hams

opinion rather the be dictated to by the ARRL and other hams? Should I write my Congressman to see who is in charge? (by the way I support the current CW/no code position).

Ten Paradoxical Commandments of Leadership

1. People are illogical, unreliable, and self-centered.

Love and trust them anyway.

2. If you do good, people will accuse you of selfish, ulterior motives.

Do good anyway.

3. If you are successful you win false friends and true enemies.

Succeed anyway.

4. The good you do today will be forgotten tomorrow.

Do good anyway.

5. Honesty and frankness makes you vulnerable.

Be honest and frank anyway.

6. The biggest person with the biggest ideas can be shot down by the
smallest person with the smallest mind.
```

Think big anyway.

7. People favor underdogs but follow only top dogs.

Fight for a few underdogs anyway.

8. What you spend years building may be destroyed overnight.

Build anyway.

9. People really need help, but may attack you if you do help them.

Help people anyway.

10. Give the world your best and you'll get kicked in the teeth.

Give the world your best anyway.

--------------795C2880E189382F6636657C--

6083. The real ham test.

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-22 00:00:00 UTC
From: Burt Fisher <burt1@rocketmail.com>
Message-ID: <33AD32E3.4D74317B@rocketmail.com>
Source record: 195209

This test is for ham radio operators:

1. Do you say QSL on voice?_____

2. Do you say "For ID" after your call?_____

3. Is it rare for you to have a contact longer than 20 minutes?_____

4. Do you check into traffic nets to up the "body count?"_____

5. Do you check into traffic nets for any reason?_____

6. Do you participate in contests and like it?_____

7. Are you overweight and hold an Extra Class license?_____

8. Have your worked more countries than the number of sexual encounters
with your spouse?_____

9. Are you a regular on a two meter repeater?_____

10. Do you dislike children in general?_____

11. Do you ask for help and when received from a number of hams send out

a general thank you to everyone in the world?_____

12. Do you think it is wrong to talk about politics or other interesting

topics on ham radio?_____

How to Score:

Number of Yes answers:

2 or less- are you sure you are a ham?
4 to 6- you are on the edge of being human or ham.
6 to 8-you are a typical ham-very boring.
8 to 1O-check your pulse, if you find one re-take
test.
1O or more. Call the funeral home, send your name
into QST as a Silent Key.

Source record: 195210

I N S T R U C T I O N S F O R T H E L A D Y O F T H E H O U S E

Have dinner ready. Plan ahead, even the night before, to have a delicious meal on time. This is a way of letting him know that you have been thinking about him and are concerned about his needs. Most men are hungry when they come home and the prospect of a good meal is part of the warm welcome needed.

Prepare yourself. Take 15 minutes to rest so that you'll be refreshed when he arrives. Touch up your makeup, put a ribbon in your hair and be fresh looking. He has just been with a lot of workweary people. Be a little gay and a little more interesting. His boring day may need a lift.

Clear away the clutter. Make one last trip through the main part of the house just before your husband arrives, gathering up school books, toys, paper, etc. Then run a dust cloth over the tables. Your husband will feel he has reached a haven of rest and order, and it will also give you a lift.

Prepare the children. Take a few minutes to wash the children's hands and faces (if they are small). Comb their hair, and if necessary change their clothes. They are little treasures and he would like to see them playing apart.

Minimize all noise. At the time of his arrival, eliminate all noise of the washer, dryer, dishwasher, or vacuum. Try to encourage the chilclren to be quiet. Be happy to see him. Greet him with a warm smile and be glad to see him.

Some don'ts. Don't greet him with problems or complaints. Don't complain if he's late for dinner. Make him comfortable. Have him lean back in a comfortable chair or suggest he lie down in the bedroom. Have a cool or warm drink ready for him. Arrange his pillow and offer to take off his shoes. Speak in a low, soft, soothing and pleasant voice. Allow him to relax and unwind.

Listen to him. You may have a dozen things to tell him, but the moment of his arrival is not the time. Let him talk first.

6085. Barbie hams

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-22 00:00:00 UTC
From: Burt Fisher <burt1@rocketmail.com>
Message-ID: <33AD340B.F6753C16@rocketmail.com>
Source record: 195211

I received the following message which says it all. By the way I coined the term "Barbie ham" to describe those hams that the old farts license when they go into the schools and run ham classes in which rarely even one kid EVER gets on the air or own equipment. The Barbie Hams are all for show.

From: ERIK BAGBY
To: BURT FISHER
Subj: INTERESTING HAMS-WHERE?

I wish you guys could come to Atlanta!! I am a 17 year old ham and have been licensed since 1985- and let me tell you how much I cannot agree more with you guys!! I have demonstrated amateur radio for SEVERAL of my

classes- never seen so many confused and bored people. I mean, let's get

real here- why would the average young person want to get into a hobby full of social oucasts when they can get into computers, drugs, booze,you name it!! I got into ham because I've got radio in my blood- but not everyone is like me!! And hey, we've got so many of those "barbie dolls" down here- just listening to all those old fart gutter scum talk about how their daughter passed her Tech is hilarious. I never

hear them on the air! No wonder I put up a GMRS repeater- people can actually understand the concept of that!!
73's from the armpit of the south,
Erik M. Bagby/KB4TPP

WHAT IS C W

* It is a unique,intimate,concise and effective communications skill still
employed throughout the world.

* It is the most efficient mode in terms of power required for long-
distance communication ,least susecptible to interference,and conserving of
the radio frequency spectrum.

* It involves no accent or pronunciation problems,therefore providing a
widely understood international language.

* It employs simpler,more reliable and easily maintained equipment than any
other communications mode.

* It is an equalizer,negating age,speech impediments and dialectical
differences;it provides for ready acceptance of youngsters in an adult
enviornment.

* It is the ONLY radio communications mode that is understood readily by
both man and machine.
```

Please note : the above article was submitted for packet by N1CNS as
a reminder that it is a serious and viable means of communication. Any
responses may be sent to me WA1HVD @ KA1AZ.RI.USA

When people asked me in the past,"what is ham radio, is it like CB?"
I used to tell them, "NO, noway, it's much different."
But, now, when asked the same question, I say, " yep, there is very
little difference, hams just have a license to do what they do."

According to the Part 97 rules, you are to contact your ARRL section
manager, he has the resposiblities if acting on all amatuer complaints
in his/her section.
But, be warned, my friend has done this, and the SM made my friend out
to be the "bad guy", then tried to get him to become a O.O.(offical
observer), instead of doing "his" job, as the rules state. The SM also
made it sound like my friend was wasting the SM's time , on a matter
that was not going to make any money for the LEAGUE.
So, we can't get the SM off his POMPUS ASS, to do HIS JOB, and the
problem continues to grow.
My friend was told by the FCC, that they were not going to do anything
, because the SM was the one who was to do it.
In other words, the FCC & the ARRL don't care at all about amatuer vs
amatuer problems.

6095. Yaesu 757 Spectrum Analzyer/Rig Control

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-22 00:00:00 UTC
From: dthimm@unix.newnorth.net
Message-ID: <33ad2fe0.575596@news.newnorth.net>
Source record: 195221

For those who have been patiently waiting,
The N9IPV Spectrum Analyzer for Yaesu FT757 style
Transceivers is ready for download at the following
URL:
www.newnorth.net\~dthimm

The intention is to release versions of this software in the future
to include most any rig with a computer interface..

Thank you.

Dan T.

However, those other services are *specifically authorized* to use those
frequencies under the Part in which they are licensed. But there is no
such specific authorization for amateurs to operate on frequencies outside
the normal Part 97 spectrum.

That wouldn't have altered the raw channel performance figures, but of course the ECC would contribute coding gain. Since Morse is quintenary rather than binary, the decision tree would likely be quite complex. I doubt "by ear" decoding would have been possible.

Message-ID: <33ad715a.0@newscene>
Source record: 195237
Cross-posted to: rec.radio.amateur.misc,alt.military.cadet,sci.military,soc.veterans

(For more information, check out April 1997 QST, p. 40, or May QST, p. 43, or check out our WWW Home Page at http://www.novia.net/~pschleck/sacmarc/. The static display of the B-29 at Eppley Airfield June 24th through the 26th, sponsored by the Confederate Air Force, is open to the public for a $2 admission, and visitors are welcome.)

The Strategic Command Memorial ARC yesterday (Jun 18) received permission to operate a Special Event Station from the world's only flyable Boeing B-29 Superfortress, nicknamed FiFi while it is on static display at Omaha's Eugene Eppley Airfield (we can only hope for the best that we can get some airborne mobile time). We have had little time to do planning, therefore details are a little sketchy at this time; but stay tuned right here as details will be published as they are developed.

Operations will start at approximately 1000 CDT (1500 UTC) on Tuesday, 24 June. Our window of opportunity continues until sometime on Thursday, although the extent of the operation will depend on the number of volunteer operators available. We plan on at least one, possibly two HF stations, operating in the lower portion of the General SSB bands (possibly some RTTY activity also). Hopefully we will have a 2 meter FM station running either packet radio and/or voice on a local repeater.

Look for our CQ using the call sign K0AIR, previously assigned to a military recreational station at Offutt Air Force near Bellevue, Nebraska, and recently assigned to the SACMARC under the vanity call sign program.

Look for additional messages providing more detail regarding specific bands/frequencies, times, QSL info, etc.

Not sure of the question John -- since this is one of several "Ham Radio
News Groups", however here is a list of Ham Radio News Groups and others
related to Radios:

rec.radio.amateur.antenna
Antenna theory and construction.
rec.radio.amateur.boatanchors
Old Time Ham Gear News Group
rec.radio.amateur.digital.misc
Digital Radio, Packet, AMTOR, G-TOR and Other TORS
rec.radio.amateur.dx
Amateur Radio DX News Group
rec.radio.amateur.equipment
Amateur Radio Hardware.
rec.radio.amateur.homebrew
Construction and Experimentation.
rec.radio.amateur.misc
Radio Practices, Contests, Events, etc.
rec.radio.amateur.policy
Radio use & regulation policy.
rec.radio.amateur.space
Space and Satellites
rec.radio.broadcasting
Broadcast Radio
rec.radio.info
Informational postings related to radio. (Moderated)
rec.radio.noncomm
Topics relating to noncommercial radio.
rec.radio.scanner
Broadcasting traffic above 30 MHz.
rec.radio.shortwave
Shortwave radio enthusiasts.
rec.radio.swap
Sell, Buy, Trade and Swap of Radio Equipment.
uk.radio.amateur
United Kingdom Ham News
rec.antiques.radio+phono
Antique Radios

6116. PL tone generator for an older rig?

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-22 00:00:00 UTC
From: blackie@gate.net
Message-ID: <5ojvcp$231e$1@news.gate.net>
Source record: 195242

Is there such a thing in existence as a pl tone generator that can be incorporated into an older rig? I have an old Yaesu FT227R 2 meter rig that I like to use in my car. Granted it is a dinosaur, but it still puts out a signal and works great.

Here is my dilemma, one of my favorite repeaters is occasionaly pl'd therefore I am locked out at those times. I would like to be able to buy or build a pl tone generator that I could use with my older rig.

Rules for the man of the house:
HOW TO TREAT THE LITTLE WOMAN SO YOU CAN
WATCH THE GAME

Just before you get home, loosen your tie and mess up
your hair. You want the family to know just how tough
your day really was.

Greet the wife with a kiss on the forehead and tell
her the house looks great.

Assume your normal position in the recliner. The wife will
bring you your slippers and Spot will fetch the newspaper. If
the mutt fails to do so, or if you find dog saliva on the sports
section, don't get grouchy. Just get caught up on the
important things that go on in a man's world.

Let the wife prepare dinner without interruption. She doesn't
want to be bothered. Don't get in the habit of offering to help
her out. Your job is to read the paper and get up to speed on
the dangers of communism and influx of shopping malls so
you can represent the family intelligently the next time you
shoot the bull across the back fence with Harold.

Don't rush the family through dinner just so you can watch
the game. Take the time to compliment the wife on dinner.
Offer constructive criticism if you think it is justified, especially
if you think explaining how your mother used to cook a
particular dish would help. Then, if the game is already in
progress, dismiss everyone with an offer to take dessert at their
leisure during the evening. Grab a bowl of ice cream and head
for the tube.

Mike

For sale: A bandswitching Globe King 400.This was a special order transmitter from the World Radio Labs shop around 1949 or 1950. It includes the power supply ,modulator deck, switch panel, three rf decks, and antenna tuner at the top, all in a 5 and a half foot rack on wheels. All tubes (with the 6 V70D finals)are included. The power supply has been restored. Cosmetically, the other units and the cabinet need attention. unit is very restorable and comes with three sets of coils, 160, 80, and 40 meters. $700 and you pick up. If interested, I have pictures on request. jim, w9ud, Coal Valley Ill.

SB DX @ WW $OPDX.310
Ohio/Penn DX Bulletin No. 310

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 310
BID: $OPDX.310
June 23, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 28.8k-1200 Baud 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N2OO, WB2YQH & The 59(9) DXReport, W3UR & Daily DX, AA4US, KP4AM, N4GN, WD4JNS, KH6BZF, AA7VL, K7JJ, NL7TB, DJ5AV & DX News Letter, F5ATD, G3SWH, G4BUE & DX News Sheet, JA1ELY, JA4DND, IK0AZG, SP2FOV, VE9AA, VK9LW and VS6XMT for the following DX information.

3W, VIETNAM. Toshi, JA1ELY, reports the following: After Hiroo's, JA2EZD, XU2A operation, Hiroo went to Vietnam to help setup a new club station, 3W6LI. Hiroo has been showing up on 15m SSB. He will be active on all band either SSB and CW. Meanwhile, Hiroo has a plan to operate from Quan Phu Quoc Island the first IOTA from 3W-land. He may use his own callsign, 3W6ZD or 3W6PQ (applied). Quan Phu Quoc Island is in the Mekong Delta West Group located on the border of Cambodia. No IOTA number is issued. Check your 1997 IOTA Directory, page 63, there are seven Vietnamese groups, all with no IOTA number.
Meanwhile, the "Daily DX" reports 3W5RS has recently been showing up again at the bottom of 20 meters on CW around 1400-1500z.

3Z, POLAND. Special event station 3Z2GD will be active once again to celebrate 1000 years of Gdansk City during the month of July. QSL via SP2FOV.

5X, UGANDA. Mats, SM7PPK, reports that he has received the Ugandian license of 5X1Z. He currently working on his antennas and has something up on 40 meters, so he will be there on CW as much as he can. Other antennas will be up soon. Mats states that there are others active on SSB, so he will mainly be on CW for the time being. QSL via SM7PKK: Mats Persson, Zenithgatan 24 #5, SE-212 14 Malmoe, Sweden (de Mats.. Please try to forget my old address this time around or your QSL will be delayed at least 3-4 months extra!!!)

8P, BARBADOS. The "DX News Sheet" reports Enno, PA0ERA, will be active from July 3-16th, during a holiday from Holetown on the West Coast. This

will be a CW only operation mainly on the WARC bands (wire antennas). Enno will be on 6 meters (IC-706 and 4 el yagi), possibly with a 6m beacon.

9G, GHANA. PA3AWW will be active now until the end of 1997 as 9G1AA. He is currently working at the Dormaa Hospital. Activity will be mostly CW. The callbook address of PA3AWW is wrong, so QSL to: H v Dousterhout, Bosbesplein 15, NL-3355 SG Papendrecht.

9M6, EAST MALAYSIA (SPECIAL EVENT DXPEDITION). A special event station will be active in Sabah to celebrate the Grand Opening of "Hillview Gardens", a resort with a Ham Radio theme. Bob, N2OO, reports this is a life-long dream of Alfons, 9M6MU, and Doris, 9M6DU. That becomes a reality this August. The special event DXpedition will be operational from Hillview Gardens August 4-23rd, signing with a special callsign (to be announced at later date). Operations will be on 40-10 SSB/CW including WARC bands for this initial operation. Operators as of this time are: Bob, N2OO/9M6OO; Alan, VS6KY/ZL1TX (ex-VS5TX) and several local 9M6 operators. All QSLs will go via N2OO. Hillview Gardens used to be Alfons and Doris' home. Last year, Alfons and Doris began a project to convert the home and surrounding property into a resort. It includes a 50 ft. swimming pool, food, beverage and entertainment areas; 20 chalets (rooms), a new 85 ft. tower and hamshack. Please send any inquiries directly to Bob's, N2OO, E-mail address at: CQPINEY@worldnet.att.net

BY, CHINA. "The 59(9) DXReport" states Simonetta, IV3FSG, will be in Beijing July 9-28th, and hopes to be active from a club station, possibly on RTTY.

CY9AA, ST. PAUL ISLAND (UPDATE AND REMINDER!). This DXpedition starts Thursday, June 26th (complete details can be found in OPDX.303). The CY9AA gang is very pleased to announce the addition of Tom Taormina, K5RC, as their "North American HF Pilot Station". Tom brings with him many years of HF DXing and will most certainly prove to be a great asset to the CY9AA gang. Please send pertinant comments to Tom (which will be relayed to the DXpedition team through various means) via E-mail: TOMK5RC@aol.com

HG, HUNGARY. Be looking for special event station HG5UFO to be active on 80-10 meters on all modes now until June 29th. Activity is in celebration of the International Exhibition of Space in Budapest. QSL via P.O. Box 17, Budapest 1456, Hungary.

HZ1AB WEB HAS MOVED. HZ1AB has moved to a new provider. There is lots of good news regarding the station's continuing operation. Also, photos and QSLs have been added. Check out at: http://www.garlic.com/~k7jj/hz1ab.html

IOTA NEWS.....
Be looking for JA4DND/4, JI4POR/4, JM4BPV/4 and JM4MAQ/4 from Oki-Archipelago (AS-041), starting June 28th (at 0700z) throughout June 30th (0100z). Activity will be on 160-6 meters SSB/CW. Operations

will be mainly on the IOTA frequencies plus 7006.7045, 10112, 14026, 14160 and 21016 kHz. QSL via homecalls.

Jim, G3RTE, and Phil, G3SWH, will be activating St. Nicolas Island in the Glenans group, IOTA EU-094 (DIFM AT-010), between Saturday 28th and Monday 30th June 1997. They plan to run two stations simultaneously with F/G3RTE/P on SSB on the usual IOTA frequencies and F/G3SWH/P on CW on all bands 80 to 10 meters. QSLs for both stations will be handled by G3SWH: 21 Dickensons Grove, Congresbury, Bristol, BS19 5HQ, UK. or via the RSGB bureau.

OH0, ALAND ISLANDS. Tim, N4GN, says he will be active as OH0/N4GN along with OH1NX and OH2BH and will arrive on the Aland Islands on Monday, July 7th. The group will put two stations on the air for the deserving. The operation will be carried out from the famous OH0W site with stacked beam antennas and a clear horizon over the open sea in all directions. There will be two FT-1000MP stations with Alpha 91B amplifiers on the air using the following suggested frequencies:
CW: 3502, 7002, 10101, 14024, 18074, 21024, 24894, 28024 and 50104 kHz
SSB: 3795, 7045, 14195, 18115, 21295, 24935, 28495 and 50110 kHz
QSL via Tim Totten, N4GN (ex-KJ4VH), 8309 Dawson Hill Road, Louisville, KY 40299-5317, U.S.A.

OJ0, MARKET REEF. The OH0 group (mentioned above) will be joined by OH1VR, OH1RX (ex-OH1NYP), OH3FT and OH0RJ on July 10th, when the Finnish Coast Guard will transport the entire group to this barren rock between Finland and Sweden. The stations will hit the airwaves late on Thursday evening, July 10th. OJ0/OH1VR will be active in the IARU Radiosport Championship and the OJ0/N4GN call sign will be used to hand out elusive OJ0 QSOs before and after the contest and also on the WARC bands during the entire weekend. A special effort will be made to activate 6 meters during the season of sporadic-E. The team will also be active on RTTY. The operation is limited to 6 kW of generator power. The same frequencies as OH0/N4GN will be used. The operation will close down on Monday, July 14th. QSL to OJ0/OH1VR via OH1VR Seppo Sisatto, Lansirinteenkatu 23, 33400 Tampere, Finland. QSL to OJ0/N4GN via Tim Totten N4GN (ex-KJ4VH), 8309 Dawson Hill Road, Louisville KY 40299-5317, U.S.A.

QSL INFO AND NEWS......
GianFederico, IK0AZG, QSL Manager of special event station IR0MFP (Millennium For Peace) states he is still waiting for QSLs to be printed. IR0MFP and several stations qualified for the new certificate "2000: Millennium for Peace" (details can be found on the 425DX Awards page at http://www-dx.deis.unibo.it/htdx.

Gene, AA4US, informs OPDX that he is now the QSL manager for Atson, V63BR.

John, AA7VL, provided OPDX with the following update to QSL Didier, FK/F5PXQ. Didier is now giving out a local address to QSL to: Didier Lavisse, Caserne Normandie, B.P. 12, 98842 Noumea Cedex, NEW CALEDONIA. However, Didier wants people to know that $1.00 is equivalent to 100

XPF, and that stamps for North America cost 130 XPF. One green stamp is not enough!

TM0, FRANCE. Special event station TM0VER will be active on all HF bands plus 144 MHz from June 28th to July 7th, CW and SSB. The station will operate from the "America-Gold Beach" Museum in Ver sur Mer (Calvados), on the channel coast of Normandy, FRANCE. The station commemorates the historical flight of R. E. Byrd, of polar fame, between USA and France in 1927, which ended in this village after a forced landing on the sea. A handsome QSL card will be printed to confirm the QSOs made with this station. Please send your card with details of the QSO either via Bureau (QSL Manager F5UOW) or direct to: A.R.S TM0VER, The AMERICA - GOLD BEACH MUSEUM, 2 Place Amiral Byrd, F-14114 VER SUR MER, FRANCE (Please for direct QSLs send a self-addressed envelope plus two International Reply Coupons "IRCs".)

USI NEWS. The United States Islands Awards Program (USI) is celebrating its 3rd anniversary, and over 1000 state islands have been activated. The special event station VY1USI will be used before and during Canada Day Contest from Yukon River Islands starting 1700Z June 30th. On July 2nd, VE7USI will be on from several islands in Atlin Lake. QSL to: John Reisenauer, NL7TB, USI Contest Mgr./Spec. Events Coordinator, 23406 East Kennedy Rd., Benton City, WA 99320 USA

UTC CORRECTION AND LEAP SECOND ADJUSTMENT. Well known propagation guru Lee, KH6BZF, would like to remind\inform all amateurs of the follwing: "Master clock pulses used by WWV, WWVH, WWVB and the GOES satellite time code transmissions are referenced to the UTC time scale. Occasionally, one second is added to the UTC time scale due to the slowing of the revolutions of the Earth. A positive leap second will be added beginning at 23-hr 59-mins 60-secs UTC on June 30th and ending at 0-hr, 0-min, 00-secs UTC on July 1st." (This is something your watch watches for...please pass it the word!..... ALOHA & Mahalo, Lee "KH6BZF REPORTS")

V73, MARSHALL ISLANDS. The JARL Kyoto Club celebrated the 50th anniversary of its foundation recently, and in celebration, they have decided to go on a DXpedition/vacation to V7 in August. Look for them to be active from August 6-14th, from Majuro Island (OC-029). Look for the following operators with callsigns to be active: JA3ART/V73AR, JA3MM/V73MM, JH3QNH/V73NH and JA3YAQ/V73YAQ. Activity will be on 160-10 meters (including the WARC bands) with operations on CW, SSB, RTTY, and 29 MHz FM. QSL via JA3OIN (CBA).

VK9W, WILLIS ISLAND. Rick, VK4LW, reports the ODXG will be operating a mailing list for their up and coming Willis Island VK9W(?) Dxpedition. Information on how to subscribe to the mail list can be found on their WEB page at: http://www.keylink.com.au/odxg. The ODXG pages have been updated with lots on new stuff.

VR97 & VS97, HONG KONG. Most DXers (if not all) know by now that Hong Kong will become a Special Administrative Region of the People's Republic of China after the transfer of sovereignty from UK to PRC on July 1, 1997.

Charlie, VS6XMT, states, "To commemorate the change over, special event stations VS97SAR (June 28-30th) and VR97SAR (July 1-2nd) will be active on the bands. Rumors say that Hong Kong DXCC status will change to a delete country!?? Perhaps this will be the last chance!?? QSL to VR2XRW: Mr. Logan Chan, PO Box 80312, Cheung Sha Wan Post Office, Kowloon, Hong Kong".

VY, CANADA. Be looking for Bruce, N6NT, to be active from the Yukon and signing VY1RAC for the Canada Day Contest July 1st. Operations will be on 160-10 meters from VY1JA's QTH.

ZF, CAYMAN ISLAND. A group of South Florida DXers will operate from Little Cayman Island (NA-016, CQ-08, ITU-11, Grid-EK99), July 10-15th. The four Southfloridians will operate during the IARU HF Championship signing ZF2DN/ZF8, and the CQ VHF contest signing ZF2PU/ZF8. Before and after the contests, they will sign indivudual calls as listed below. The operators are: David - ZF2DN/ZF8 (QSL via KP4AM); Bob - ZF2DE/ZF8 (QSL via N4BP); Bruce - ZF2PU/ZF8 (QSL via W4OVU); and Julio - ZF2JS/ZF8 (QSL via WD4JNS). The group plans to operate all bands and modes, 160-6 meters, CW, Phone, RTTY and QRP.

Call CommSpec at 800-854-0547 and order their SS32 encoder....dip switch
programmable and they have sheets on how to install it in the FT227R..
I have such a rig and put my SS32 external in a small box with their
optional switch that lets me select ALL 32 PL tones...so I dont have
to remove the covers!....Have to rewire the ACC plug on the back of the
227R but its easy to do..

I have to agree with you Don. Listening to 2 meters today is much like listening to CB in the late 70's. Amateur radio operators are becoming the architects of their own demise, unfortunately.

Totally wrong, sir! Have you EVER volunteered your services? I know
of no volunteer organzation that has turned down new recruits! It is an
anachronism if even possible. Network, get involved by asking. The
"cliques"
you mention exist only in one's mind.

Again, totally DIFFERENT issue. The "quackers" are mostly those who
who entered under the novice or no-code requirements. 2-meters and up
have
indeed become the dumping grounds of more serious CBers who bring with
them,
unfortunately, the legacy of CB practices. We want more of this????

Can someone suggest helps in learning the Morse Code?
I have been trying and all the letters still sounds alike to me.
Sometimes I cant tell the difference between dots and dashes even. They
all seem to run together.

The written test isnt too difficult. I can get that, but learning Morse
Code seems so painful. I have been trying but havent been able to learn
anything. If anyone can suggest any helpful advice I would be much
grateful. I feel like giving up on the whole idea. Its all very
discouraging.

Thank you for any advice.

Hi, Ive got a DC adapter that I use im my car. It can output 9v or 12v.
I'd like to use it on a CD player that needs 10.5v. Can I just solder in a
resistor in series to drop the 12v to 10.5? What size/type of resistor
should I use?
I don't get to this site very often so if you'd e-mail me the answer i"d
really appreciate it!
Thanks in advance---Ken Lumley krlumley@accesscom.com

Haw haw, and this surprizes you Burt? God I wish you could include the
.wav file recorded while you were reading the ARRL letter for the first
time.

I bet you were whining like that Seargeant on the witness stand in "A
few good men"
"We did nothing wrong, we did nothing wrong!"

>
> There is no mention that I ever did a thing wrong as a VE. Clearly the

And they should not, all you do is make silly child like remarks that
are generalizations without much merit. Why would the ARRL want someone
like you connected in anyway to the hobby, good riddens.
>

> The ARRL leaders of course are not Nazis but if they had an Army would
> you trust them to be just? Would you be free under a government run by
> the ARRL?

They don't have to be "just" Burt, they are a private organization and
they made a decision to get rid of your lame ass, because you profess
things about amateur radio that are untrue, generalizations, that are
offensive to most.

Not much fun when someone smacks YOU in the face eh Burt? Your so
inconsiderate, I'm sure that you have no concern that the things you say
are offensive and hurtful to others. Freedom of speech? Sure, but you've
completely lost any sense of being considerate of others. It's just
"Burt" whatever "Burt" wants. You must be very proud of yourself Burt,
you've made lots of friends and really helped promote the positive
aspects of our beloved hobby.

Quite an accomplishment Burt.

You just dont get it do you Burt? The FCC issues licenses for amateur radio, they are a governmental division. No, you should not loose your license if you have a negative opinion of the FCC. The ARRL is a PRIVATE hellooooo, PRIVATE organization.

How long would you last as a salesperson if after each sale you called your boss an overweight liar who missrepresents the wishes of the company? Sheesh, you get more bizzare with each post. Do you think you boss would be justified to fire you if you were indeed making such statements? Well, that's just what the ARRL did, they fired you.

What does being a VE have to do with your opinions of the way hams act on the air? Probably not much, but based on the fact that you make slanderous and UNTRUE statements about the very hobby you are testing people for they made a decision to decline your services. That simple.

I'll bet when you applied for your teaching job you didn't badmouth your employer during the interview did you? Besides, why would you want to be a VE anyway, you have nothing but contempt for the hobby.

Well Carl, since they are a private organization why should they have to
answer to you?
Do you feel as though you are entitled to something from them?
If you don't support their views, don't join the club.

Tom, I'm confused by your comments, what happened in China was clearly a tyranical governments desire to control the masses. Do you think there is ANY connection between this and the decisions made by a private corporation to hire or fire someone?

Seems like a bit of a stretch to me, If you were a company owner wouldn't you want the ability to fire someone who made untrue, slanderous statements about you or your company or do you think they would have the right to do this while working for you?

The "nice little German" comment was distasteful and not rellevant to the issue of a private company weeding out what they considered to be a bad apple.

> Thank you for any advice.

Hi, Betty.

First of all, concentrate on each character's SOUND -- not on the number of dots and dashes that comprise each character.

Study only 4-5 characters at a time. When you can copy those on a regular basis, add 4-5 more characteracters to the list. Continue studying in this fashion until all of the required characters (letters, numbers, puncutation, etc.) are included.

You might also try out my Morse code program, International Morse Code Processor. You can download it from

http://www.coast.net/SimTel/win3/ham

Below are its features:

IMCPW (International Morse Code Processor for Windows) v3.13 is a Windows 3.1 & 95 compatible program which translates program-generated/user-defined text and text files to Morse code. Code speed is adjustable from 3-50 wpm with a character speed of 10-50 wpm for Farnsworth code. Keyboard Copy window included for copying code from the keyboad. "Barred" characters implemented. User can define any prosign. Select characters and prosigns in groups or in any combination. Includes a comprehensive help facility, a main menu, four popup menus, and eleven code practice lessons. It is Fully customizable from the Options menu. A Sound card is not required. Requires 964K of free hard disk.

73 and Good Luck,

Source record: 195151

I have for sale an Icom 735 for $545.00 plus the shipping.

It is in good working condition and has the box & manual. I purchased the radio in 1992, and I am the second owner, so I am not exactly sure on the age,but believe it is 8 to 9 years old. It is just the standard radio, no added extras like filters. I am willing to meet up with someone on the air if they would like to hear the radio.

For more info you can e-mail me at:

t95194@aol.com

Please send inquires to my e-mail address instead of posting them here, since I am not sure when I will return again.

73's & Thanks

Dave (N9NMD)

From: wejones@megalink.NET
Message-ID: <199706232033.QAA02424@oxford.megalink.net>
Source record: 195152

Hi... As the subject implies, I'm having some minor problems with my 736. When I first got the unit several years ago, most FM signals sounded fine in either its
FM-narrow or regular FM (wide) mode. However about 2 years ago I noticed that some wide deviation packet signals gave absolutely no audio when in the FM-narrow mode, even though they were strong 40-over signals. I thought that somehow the deviation of the wide packet signals was outside the narrow bandpass, but I noticed that if I turned down the squelch so that even background noise came through, then the packet audio could be heard just fine, implying that the narrow bandpass was not responsible. I never figured this problem out, and just used the FM wide mode, however recently I found a couple local repeaters that seem to be running a bit wide on deviation that are now doing similar things even in wide mode, ie when certain people talk, parts of the words are clipped, blanking out completely, yet when I turn off the squelch, they sound normal. Other people on the same repeater sound normal, and everyone on some other repeaters sound normal. Associated with this problem, is another problem, ie if I put this radio into scan mode, the rig scans fine, but when it comes to a signal, the scanning does not stop, but rather just keeps on going. This problem persists, however, even if I turn off the squelch. I suspect (but am not sure) that these problems are related. As far as the first problems, it seems that there is something wrong with the squelch circuitry, and/or the circuitry that detects signal level, such that on wide deviation signals the rig somehow isn't detecting the presence of a signal, and squelches the audio, and on the latter symptom, the rig is not detecting the presence of a signal, and is thus not stopping the scan. The problem is, that both the analog signal strength meter, and the digital signal strength reading obtained via the CAT interface seem to be functioning normally, giving indications of strong signals.
It seems to me that I do not completely understand how the squelch/signal sensing circuitry functions on this radio. Ie it seems to be something other than signal strength if a strong signal with lots of audio is not detected. I thought that the signal strength meter as well as the squelch circuitry all worked off the AGC circuit, but I am starting to think that this is not the case here.
Has anyone run into similar symptoms that could aim me in the right direction as to troubleshooting this problem. I can and do still use the radio, as the problem isn't bad enough to force me to tear into it or send it off for repair, but if I had a pretty good clue as to what might be wrong, I think I would attempt the repair.
Also, does anyone know a telephone # or web site where the service manual for this radio can be purchased?
Thanks in advance

Les>VK2KYJ contributes towards repeater links; further technical talk follows upon>combating repeater desensing; and what looks like=
a survey upon the use of>Morse code appears to have slipped in, with little prior publicity.>
The survey is nothing of the sort. The survey actually asks a specific question about whether the international radio regulations should continue require Morse proficiency for operation on amateur bands below 30 MHz. Even if this section is removed from the ITU regulations, national governments may wish to continue to test for Morse proficiency.

The usage of Morse on air is a different matter. Those involved in the so-called "Morse debate" often fail to make this distinction, to everyone's obfuscation.

The use of a phrase like "whether Morse testing should remain an international requirement for access to bands below 30 MHz" would have been better.

I was just browsing the news groups on Ham radio and I got to say, most soles are either misguided or putting into amateur radio what they want out of it..

It took me a lot of years to get into this hobby because I watch my dad plug away at his key or talk with contacts that really didn't interest me. As I saw here is the same as I thought bunch of old men with nothing else to do but sit infront of expensive pieces of equipment bragging they can change the neighbors TV channel everytime they key the mike.

Well I tried out this hobby and found it a little differant then I had imagined. More people my age then I thought, younger even. I have also found that the one that are complaining the most about the "Art of Ham Radio" going down the drain are the same people I find out causing most of the problems. Example later...

You get out of a hobby whatever you put in. When my father was active in have radio he would take others under his wing, an Elmer if any are familiar with the term. Most of them when they received their licenses were very competant when they got on the air. The problem today with video tapes, test books, audio tapes and the like nobody has the idea on the proper way to act while on the air. If many of the gripers would get active and help those who are new, instead of hinder then maybe this hobby would take off again. Something must be interesting about ham radio with the plethora of new licensees on the bands.

My point being, I was working with the nieghbors son who just received his license a Tech+ now going for his general. Anyhow, just the other day I was working getting him on the local repeater and a very rude local complainer just kept keying over him every time he tryed to talk. Then started to complain that the kid couldn't figure out how to work a repeater system. What a jerk. Whether I am on HF, VHF or UHF I find the same thing the older supposedly wiser hams are causing just as much if not more problems and giving the new hams a hard time.

So next time we have a need to say Ham Radio is going to the dogs lets look in our own shack and see if there might be a way to make it better...

6162. FOR SALE: Yaesu FT-890AT & base/mobile accesories

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-23 00:00:00 UTC
From: Michael Conner <mconner2*@utk.edu>
Message-ID: <33AEE278.4498@utk.edu>
Source record: 195155
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc

FOR SALE:

Yaesu FT-890AT in very good condition. Has built-in antenna tuner
(great for mobile use), built-in cw keyer, 100 Watts output, general
coverage receiver, and all mode transmitter. Comes with hand-held mic.
Still have original box and owner's manual. I always found this rig to
have a really great receiver.

Also for sale:

Yausu YS-60 SWR + Power meter (matching color to 890)
Astron RS-50M (with meters) (barely used)
Bencher Keyer BY-1 (barely used)
Hustler Mobile resonators for:
80, 75, 40, 30, 20, 17, 15 and 10 meters (low power models)
and two masts - one stainless steel and other is fiberglass covered.
Also have a mast mount for base use.
(all resonators in good condition and worked well for me mobile and
base!)

and I'll throw in a 75' length of 9913 coax (no connectors).

Prices dependent on who pays shipping, but figuring:

FT-890AT $750
YS-60 $70
RS-50M $175
BY-1 $ 50
Hustler $140 for all including masts.

Would prefer to sell entire package. Am selling because work hours are
too long and I don't travel much any more and the cash would be useful.

Please e-mail me for further details, or call in the afternoons at work:
(423) 974-0123.

Thank you!

Gordon West, WB6NOA and I will be operating during this year's ARRL Field Day from Fry's Electronics in San Jose, CA.

While we won't actually be entering the competition, we'd love to hand out points for the rest of you who will! If you hear us on the air (and we should be active on all bands), please stop by and have a chat. If you're in the area, please visit us, and take a look at NOA's "Ark", Gordo's mobile station.

73, and good luck in the competition.

>I used to tell them, "NO, noway, it's much different."
>But, now, when asked the same question, I say, " yep, there is very
>little difference, hams just have a license to do what they do."

The other difference is that hams insist on hanging on to an obsolete communications method known as "Morse Code" and requiring it for admission into their fraternity. This has the effect of further eroding their numbers as scores of potential new, young hams shrug their shoulders in disbelief and take up the personal communications hobby via freeband CB or the Internet instead.

Nobody. Welcome to America in the 90s. Do whatever you want. Nobody
cares. If you do get caught, just blame it on a bad childhood or a
hostile society.

Here in Orlando, we now have FOUR...count 'em...FOUR illegal Spanish FM
pirates. They all operate out in the open. One has even gone as far as
to list their address and phone number in the Yellow Pages. Nobody cares.

Another example of would-be new blood in amateur radio, if not for the ridiculous Morse hazing ritual.

Don't waste your time, Betty. Ham radio is a dying hobby. Because of the ARRL's insistence on requiring knowledge of stone-age technology as a condition of licensing, the number of hams will steadilly drop off and commercial interests will gradually take control of their (former) frequency allocations.

Oceania DX Group

Dxpedition on Willis island (VK9W ?)
and IOTA Coral Sea Islands

SEPTEMBER 1997
****

On the 09 september1997, 10 operators will depart from Cairns on
the 60 foot vessel "FLOREAT"
The first destination is Willis Island North Islet. This journey
will take approx. 30 hours. Overs 3 tonne of equipement including
800 litres of petrol will be unloaded for 12 day stay. With 2
separate campsites set up the operators will be able to set
up 6 complete HF station and 1 on 6m.
Negotiations are in hand to use all yaesu, with an Australian
manufacturer supplying all the antenna. These will include full
size quater wave verticals for all the low bands. Upon completion
from this site we will depart enroute to HOMES REFF OC?????.
Portions of the equipement will be installed for appr. 30 hours.

The budget for these 2 Dxpedition es 32.400 usd. Donation are
most welcome no matter how big or small. We are fortunate that
the vessel has been secured at a reasonable rate or it would
have been 40.000 usd.

Please send your donations to :

ODXG WILLIS EFFORT P.o BOX 929 GYMPIE, QLD 4570, AUSTRALIA.

All landing permissions have been granted and receiced.

I must agree, as an amateur operator myself, that two meters sounds like it has turned into another citizen's band. However, also as a coordinator for a local severe weather radio network that runs its operations on several amateur bands simultaneously, I must say that everybody is welcome to participate. We do have protocols that require minimal training, but there is no "clique" or "club". We are not phony, making no exaggerations of our abilities, and according to the agency that has requested our assistance, we provide an efficient, valuable service to our public.

Often I have seen people react in this manner to organizations or groups that provide services similar to ours. Perhaps they are jealous, or feel threatened by the existence of the service, or even sometimes they have a personal disagreement with somebody who works with the group.

Also, be assured that I hold no identification cards, nor is the vehicle that I drive equipped with an array of lights, sirens, decals, or an antenna farm. I do not exaggerate my abilities. I am not out for recognition, or external reward. I don't care if others know what I do or not. The reward that I find is from within, and that is the opinion that most of the people that I work with have. Of course, you will have the occasional weirdo that feels they need a vehicle that looks like a regular police cruiser, but that happens only very rarely.

I guess my point is that there seems to be some sort of attempt to propogate a stereotype. This is not exactly fair, judging from your seemingly limited knowledge of volunteer public safety. I will make one thing clear: I will judge the importance and quality of the service that our group provides by our parent (Federal) agency's input and criticism's and also the suggestions from those with experience in this field, not by the unintelligent and/or uninformed opinions of any ignorant individual. Do not

generalize opinions associated with volunteer public service by what is heard via casual chit-chat on a repeater. To do so is narrow-minded.

For Sale

Diamond D130J Discone. Only Two months old. Like new condition. With Manual.

The discone antenna is used by government and military agencies worldwide because of its wide bandwidth characteristics and non-directional coverage. Designed for use with wide-frequency coverage VHF/UHF scanners and receivers, the Diamond D130J discone consists of 16 rugged, stainless steel elements and is capable of transmitting up to 200 watts in the amateur 50, 144, 220, 432, 900, and 1200 MHz bands. As a receiving antenna, the D130J is omni-directional for continuous 25-1000 MHz (and above) coverage. A base-loaded, vertical top element is used as a low band (30-50 MHz) frequency extender. The elements are arranged on a 24-inch support pipe equipped with two strong mounting brackets to accomodate any standard mast-pipe (1"to 2-1/8" diameter).

For Sale

Diamond D130J Discone. Only Two months old. Like new condition. With Manual.
$55.00 Firm

The discone antenna is used by government and military agencies worldwide because of its wide bandwidth characteristics and non-directional coverage. Designed for use with wide-frequency coverage VHF/UHF scanners and receivers, the Diamond D130J discone consists of 16 rugged, stainless steel elements and is capable of transmitting up to 200 watts in the amateur 50, 144, 220, 432, 900, and 1200 MHz bands. As a receiving antenna, the D130J is omni-directional for continuous 25-1000 MHz (and above) coverage. A base-loaded, vertical top element is used as a low band (30-50 MHz) frequency extender. The elements are arranged on a 24-inch support pipe equipped with two strong mounting brackets to accomodate any standard mast-pipe (1"to 2-1/8" diameter).

6181. NEW SOLAR CYCLE 23 STATUS REPORT

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-23 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <5omr0o$h0s3@mars.online.uleth.ca>
Source record: 195174
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc

If this article interests you, check out our Considerable and NEW Web Page:
(An advanced and user-friendly interface to everything under the Sun)

http://solar.uleth.ca/solar

STATUS OF THE CURRENT SOLAR CYCLE:

Everyone now agrees that we have finally observed the birth of solar cycle 23. We have probably been immersed within this new cycle for some time. According to sunspots, the minimum occurred in May 1996 with an as yet unofficial smoothed sunspot number of 8.1. Since then, we have observed a steady increase in the number of new-cycle sunspots having the proper new-cycle magnetic polarities. At the time of this writing, most of the new sunspots which are appearing are new-cycle spots.

According to the number of days in which no sunspots appeared, the cycle minimum (or maximum number of spotless days) occurred in October 1996 when there were 26 spotless days. This month also corresponds with the lowest monthly observed sunspot number of 2.3 (reported by SEC) and 1.8 (according to the International Relative Sunspot Number [RI]).

In addition, butterfly plots showing the emergence of new solar sunspot regions according to solar latitude indicates a clear separation in formation latitudes from old cycle 22 and new cycle 23. There are also many other parameters which have shown that new cycle 23 is now firmly in-progress.

This conclusion is a mixed-blessing for industry.

Radio communicators can now begin to look forward to an increasingly productive reign of ionospheric radio communications. In fact, higher-band high-frequency (HF) radio communications are already beginning to be observed. By July of 1998 (within the next 12 months), the observed sunspot number should almost triple in magnitude from a current predicted smoothed value of 40 for June 1997 (predicted through regression methods) to 109 (plus or minus 25) by July 1998. This will substantially increase the strength of the ionosphere. The next year will therefore be an exciting one for radio communicators.

The predicted smoothed sunspot number over the next 9 years is predicted to follow this pattern:

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
1997	019	022	027	030	034	040	044	050	054	060	066	071
1998	077	082	088	093	099	103	109	113	119	123	128	131
1999	136	139	142	146	148	151	153	154	156	157	158	159
2000	160	160	160	160	159	158	157	156	155	154	152	150

2001 148 146 142 140 137 134 131 128 124 121 118 114
2002 111 107 103 100 097 093 089 086 082 079 076 072
2003 069 066 062 060 057 053 051 048 046 043 041 039
2004 036 034 032 030 028 027 024 023 021 020 019 017
2005 016 014 013 012 012 011 010 009 009 008 *** ***

The predicted smoothed 10.7 cm solar radio flux values over the next 9 years is predicted to follow this pattern:

Jan Feb Mar Apr May Jun Jul Aug Sep Oct Nov Dec
1997 077 080 084 087 091 096 100 105 109 114 119 124
1998 129 134 139 144 149 153 158 162 167 171 175 178
1999 182 185 188 191 193 196 198 199 201 202 203 204
2000 205 205 205 205 204 203 202 201 200 199 197 195
2001 193 191 188 186 183 181 178 175 172 169 166 163
2002 160 156 153 150 147 144 140 137 134 131 128 125

Satellite operators and users of satellite technology are less impressed with the onset of this new cycle of activity. The increased number of sunspots implies an attendant increase in the number of solar flares capable of spewing out particles that can charge and damage sensitive electronic components. The number of associated Earth-directed coronal mass ejections will also increase. This all means that users and owners of satellite technology will have to be increasingly aware of potential Earth-bound interplanetary disturbances. The death of the Telstar 401 satellite has been unofficially attributed to the arrival of such a disturbance, combined with the effects of higher-than-normal densities of energetically charged electrons. That particular interplanetary disturbance was about the size of a mouse when you think of what is yet to come over the next 4 to 6 years. The largest interplanetary disturbances which we will observe during solar cycle 23 may be closer in size to an elephant than the small mouse we observed that may have contributed to the sudden death of Telstar 401. The overwhelming message which should be sent to users of satellite technology during this new solar cycle is "be cautious."

Electrical hydro operators have enjoyed several years of quiet conditions. Nothing similar in magnitude to the events of March 1989 have been observed, where almost the entire electrical grid of electricity supplied to the province of Quebec collapsed within less than 2 minutes due to powerful electrical currents that were induced into Hydro Quebecs electrical power lines during one of the strongest geomagnetic storms on record. Since most of the electrical power lines and companies interconnect their lines, this outage had impacts all across North America. The additional load drawn from other power companies to compensate for the loss observed during the Quebec blackout brought many other power companies close to similar failure conditions. If the situation was slightly worse, other blackouts across North America could have been observed - possibly making this a much larger continent-wide type of power blackout instead of a

relatively localized province-wide Quebec blackout.

Oak Ridge National Laboratory studied the effects that a geomagnetic storm might have on the U.S. economy if the storm was only slightly larger than the one observed in March 1989. Their estimate of the impact of such a disturbance to the Gross Domestic Product alone put total economic costs in the U.S. in the $3 to $6 BILLION dollar range! This assessment, along with reviews conducted by the North American Electric Reliability Council placed the 1989 and 1991 geomagnetic storm events in a category equivalent to hurricane Hugo and the San Fransisco earthquake in its relative impact to the reliability of the electric power grids in North America. That's a sobering thought for hydro operators and everyone reliant upon electricity!

The ability to predict conditions condusive to such large storm events will receive a considerable boost later this year when NASA's ACE satellite (Advanced Composition Explorer) is due to be launched. This satellite will provide near-continuous sampling of the space environment upstream of the Earth. It will provide as much as about 60 minutes of lead-time to the arrival of disturbances at the Earth. This should be sufficient time to allow hydro operators to prepare and watch for the damaging conditions that can follow interplanetary disturbances.

Predictions of geomagnetic activity show that the number of minor, major and severe geomagnetic storms will steadily increase. The year with the maximum number of minor storm days is expected in the year 2005 during the decline of solar cycle 23 when the occurrence frequency of geoeffective coronal holes will reach a maximum. Over 40 minor storm days are expected in the year 2005. During the solar maximum year of 2000, coronal mass ejection induced minor storms should number at about 30 during the year. This is more than double the number of minor storm days expected during 1997. Major geomagnetic storming is expected to peak in the years between 1999 and 2002. Severe geomagnetic storming, which is very difficult to predict, should peak in frequency between the years 1999 and 2005 with the preferred year of peak severe storm frequency being 2002.

People interested in observing aurora's will be happy to know that we are well on our way to seeing larger events. Over the next 3 to 6 years, we will see many very significant auroral displays that should cover much of the U.S. and all of Canada. Activity observed during the last 3 years has been very miniscule compared to the events we can expect to observe during this new cycle. The largest of these events should be sufficiently intense to produce visible auroral activity from as far south as Florida! Although this is horrendous news for satellite users, radio communicators, navigators, surveyors and others, it is exciting news for those who love to watch for these awesomely powerful atmospheric displays of activity.

The frequency and magnitude of solar flares is also expected to increase considerably over the next 3 to 6 years. Over the last few years, most of the solar flares we have observed have been very small and insignificant. As we approach the new millenium, the influence and power output of solar flares could increase by several orders of magnitude. The largest solar flares of this new solar cycle will almost certainly be at least 10,000 times more

powerful than the majority of smaller flares we have observed over the last couple of years. These rogue flares could begin to be observed as early as 1998 with a peak expected in the years between 1999 and 2003.

Broken down, the number of M-class flares observed during an entire year should follow a pattern similar to this:

1997 1998 1999 2000 2001 2002 2003 2004
15 40 220 530 370 540 300 200

The number of X-class flares observed during an entire year should behave similar to this:

1997 1998 1999 2000 2001 2002 2003 2004
1 5 15 40 30 50 30 10

Major proton flare events capable of increasing proton densities in the near-Earth space environment are expected to reach a maximum between the years 1999 and 2003 with a double-maximum predicted for the years 2000 and 2002. The number of predicted solar proton events is expected to increase slightly in 1998 and then more than triple between 1998 and 1999. There could be a fairly copious number of solar proton events during cycle 23. Estimates range from about 8 to as high as about 16 per year during the years of maximum proton flaring.

These are just a few of the events we can expect to observe during this new solar cycle.

The new millenium should be ushered in a BANG! Periods of solar activity will be observed that will be capable of literally shaking space!

(To help accomodate the increased demand for information during solar cycle 23, we have redesigned our web pages to serve more as a central hub for information. Everything from current solar and geophysical indices to current auroral activity sighting reports, daily reports, alerts and warnings, and much more can now be found at: http://solar.uleth.ca/solar)

No, it isn't fair at all, but it happens every day. We should strive to
educate the public, rather than alienate them by calling them ignorant and
closed minded.

I will make one thing clear: I will judge the importance and
> quality of the service that our group provides by our parent (Federal)
agency's input
> and criticism's and also the suggestions from those with experience in
this field, not
> by the unintelligent and/or uninformed opinions of any ignorant individual.

This could be a rather short sighted viewpoint in the long run. I would
presume the majority of our elected representatives in Washington have no
clue about amateur radio, and are likely getting their information from
sources who are either ignorant themselves, or stand to reap substantial
financial benefits from the reduction/elimination of amateur bands in the
VHF/UHF spectrum (does low earth orbit ring any bells?)

Do not
> generalize opinions associated with volunteer public service by what is
heard via casual chit-chat on a repeater. To do so is narrow-minded.

Perhaps.

The detachable head is great. The electronics box (with its fan) can sit in the back. Receiver performance is pretty uniform from 200 MHz down to wherever you want to go. Now 20 watts on 2 meters rather than 10. Room for 2 filters. I'm quite happy with it- now if I only had some sunspots to go with it (an option Icom doesn't offer yet)...

> KC7NKD

Well said, Kieth. Don't blame you a bit. Of all the "No Code = CB" garbage I've seen here, the actuality is that I've not heard or seen any group of hams behave anything like the profane and inane CB communications I've heard on Ch 19 anywhere EXCEPT THIS NEWSGROUP!

If you want to get into a forum for Hams where this doesn't happen, consider subscribing to CompuServe. It's $10 a month if you use a download robot like Tapcis or Ozcis and _don't_ use it to access the internet for hours on end, and the forums are monitored. The "Your mother wears army shoes" and "So's your old man" crowd get thrown out on their ear, post haste!

:

: My provider had a problem with the newsgroups, now fixed.

: Would you call me the above to my face.
: Hams are so gutless.

: Burt

Burt, you shouldn't generalize all hams like that. Some of us aren't gutless. If I had a problem with ya, I would most assuredly tell you up front, and if distance didn't prohibit me, right to your face. However, I don't have a problem with you. I actually identify with some of your posts, and see the reality in them. These people like O'Brien, their not worth the hassle to rebute to. He has shown absolute immature behavior, especially with his posts like, "Get back in the closet freak." That pissed me off. Hams should, like most of the world, be a little more forgiving toward each other. Hams should do this especially because their hobby depends on each other. If we don't ban together and defend the hobby, no one else will. The FCC has proven that. Remember that, "A house divided upon itself cannot stand." Ham radio can't exist for much longer if we don't stand together. Granted, ham radio and its operators have many flaws. But that's to be expected, we are human. But flat-out bashing of other hams, petty bickering about favorite modes, etc., is just bullshit. If you don't like a certain guy, don't talk to him. If you don't like a certain mode, don't use it. Just because you don't like it, doesn't mean other people can't use it. If you don't like the hobby, nothing is stopping you from quitting. Now that I've said the basics of it, flame away. But before you start bashing me, here is some info you might like to trash. I'm a tech plus, with the full intention of upgrading to at least Advanced. The only reason I haven't yet is because working full time AND going to college is a major hinderence on learning the code. Yes I do intend to learn it. It may or may not be an outdated and/or useless mode,

but nonetheless, it is a requirement to upgrade. Live with it. Now, flame away.

Well, clearly it bothers you enough to consult a lawyer, and post it
here for all to see.

> > few good men", "We did nothing wrong, we did nothing wrong!"

> Absolutely. Being a VE was my life,

Well, I've never seen someone so upset over loosing their VE status.
Perhaps being a VE WAS your life.

> EVER said that was untrue?

Ah, the violence inherent in Burts personality finally comes out, and if
I say it to your face? What then Burt? Your going to kick my ass? Shoot
me?
ROTFLOL... I'm not a violent person Burt but I've dropped much bigger
than you that's for sure!

> Most hams are fat, white lazy
> and boring. That is not a true statement?

Oh I see, It's "MOST" now not "ALL" I guess you don't remember the
comments when you used the word "ALL". You seem to change your
statements as you go along.

Pityful...

Oh I see, it's all about whether or not YOUR serious.

Well, your wife looks like one of the stepford wifes with a drug induced haze on her face, you certainly have seen your better years. On the other hand your daughter Sam is more than welcome to don some latex or leather and become my dominatrix. Hell I'll buy her the plane ticket. We could play the jew/gentile roles, it would be fun.

But, I'm not SERIOUS Burt, just kidding, you know, for fun, yep I'm just havin fun,
just like you. So have Sam call me and lets set something up.

Tim

AFFILIATED CLUBS NEWS

Clubs are remind that the affiliated clubs net is on at 9 am on 3.595
on 1st and 3rd Sundays of the month. If any member of your club can come
up on these days. I can tell that person or persons would be greatly
appreciated. The next net is Sunday 6 July.

Attention Affiliated Clubs and WIA members Nominations for the new quarterly
VK2 division individual award have been called. In other words please dob
someone in that deserves the award.

The theme for this quarters award is for Services to Amateur Radio.
Nominations should reach Amateur Radio house before 7 July, giving
particulars that make this WIA member stand out so that Council can make
the correct choice at the July Council Meeting

The value of this quarters award is $40.00 awards are only for WIA members.

Members of council are excluded.

-- Ken Westerman VK2AGW
VK2 division Affiliated Clubs Officer and
Councillor responsible for Western and Riverina Areas of NSW

WICEN NEWS

The Annual General Meeting will be on Saturday 9th August, at the Hornsby
RSL Club, starting at 11am. It will be preceded by an RCOs' meeting,
to appoint two Deputy State Coordinators. There will be a practical
demonstration of the GRN system, and as an added inducement some door
prizes will be given away, namely gift vouchers upon a well-known electronics
retail chain and a year's membership of WICEN. Furthermore, Simon Trotter
VK1AUS will be speaking on his experiences in RAYNET -- WICEN's equivalent
in Great Britain -- and the ACT.

The Eloura Fun Run is next Sunday, and David VK2TIP is looking for seven
to ten operators for the event. He can be contacted on: (02) 9364-8631
(work), or (02) 9588-5061 (home).

Also next weekend is the Wilderness Rescue Nav Shield, run by Alan VK2YYJ;
he can be contacted on the WICEN mobile number, 015-097-217.

And also next weekend is the St Albans Horse Enduro. Around six operators are required, from 4am to 2pm, with some checkpoints requiring 4WD access. Please contact Andy VK2XRX if you can assist.

The Colo Classic Endurance Ride is being organised by Blue Mountains WICEN. It's being held on Saturday 12th July and is a 24 hour event. Checkpoints will be open for a maximum of 8 hours. There is camping available for anyone who would like to stay over the whole weekend. Three more operators are needed to cover all checkpoints, and a meal will be provided from the BBQ when operators complete their checkpoint. If you would like to help out, please contact Neil Fallshaw, at work on (02) 9342-1589, at home on (047) 51-6449, or e-mail as neil_fallshaw@yes.optus.com.au.

The Central Coast AGM will be held on 25th July, at the Central Coast Rescue Squad Base, Rose St, Wyong, starting at 8pm.

The Hunter region will be providing safety communications for the "CanTeen Annual Troy Newman Cycle Trek" from Sydney to Newcastle on 27th July; the event co-ordinator is Pauline VK2GTB.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tues- days, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on 015-097-217.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

MAGAZINE ROUNDUP

Here again is a rather late summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the June issues of the various magazines.

"Electronics Australia" visits the only surviving (and operating) Alexanderson quenched spark transmitter in the world, SAQ on 17.2 kHz in Sweden; a remote power switch, controlled from the telephone, is constructed; the one-firebottle receiver is concluded; Australia's national game, Two-Up, is built for less than $10; the 4017 CMOS decade counter is examined; and those into ATV can build a composite sync generator.

"Silicon Chip" agains questions the safety of cellular phones, based upon cancer research upon mice (your scribe's daughter assures him that she has yet to see a mouse using a cellular phone); PCs find a new use as a temperature controller (we always knew that they were good for something); those into ATV can build a customisable pattern generator; a simple signal tracer, usable to 15MHz, sees light; we did not realise that "hard disk drives" (whatever they are) require regular maintenance for some primitive windowing systems; those into stepper motors will find an article of interest; the series on how CROs work concludes with a peek into a 50GHz scope -- that's right, a fifty-gigahertz scope; and untuned signal tracers are used to fault-find fire-bottle receivers.

"Amateur Radio" builds an RF inductance meter; a tripler for 70cm is described, but we caution that such things are known to be "dirty"; a DF receiver for 2m is described; "contact wetting", in switches and relays, is rediscovered; a fascinating article shows how Amateurs can still contribute towards communications, especially in the satellite sphere; low-voltage Tee-connectors have their polarities exposed (and a local guru says that there are three ways of connecting same); Amateur wormholes have their secrets revealed; our own Les VK2KYJ contributes towards repeater links; further technical talk follows upon combating repeater desensing; and what looks like a survey upon the use of Morse code appears to have slipped in, with little prior publicity.

"Radio and Communications" reminisces upon 20 years of CB; quad and delta loops are fed somewhat better; the stupidity of the various laws against scanning is revealed; packet radio operating upon free operating systems (as opposed to those commercial shrink-wrapped packages) is discussed; the series on the stupid things that people do to their equipment is continued; a 2m Ringo is resolutely resurrected; noise blankers are dissected; those wishing to get into 9600 bps packet radio can put an FM-92 to good use; and the mass debate on CW continues unabated.

Be listening next month for another summary of the local magazines.

-- Dave Horsfall VK2ZTB

DX REPORT

KENYA - 5Z4LL is active from Kiambu and is often found on 18145 Khz around 1500z.

MALTA - 9H0VRZ will be operated by 14 Dutch amateurs from June 21 to July 5. Activity is expected on 80 to 6 meters, using CW and SSB. Operators may also use their own 9H3 calls during this DXpedition.

HUNGARY - Special Event Station HG5UFO will be active on 80 to 10 meters using all modes from June 20 to 29 for the International Exhibition of Space in Budapest.

PANAMA - HP3/WT4K will be active using SSB and RTTY from June 23 to 27.

HONDURAS - After his Panama operation, Bill, WT4K, may be active as HR6/WT4K from June 30 to July 4.

NORTHERN MARIANAS - KH0N and KH0/JA6HBS will be active as from Saipan Island, IOTA OC 086, from June 20 to 23. Operations will be on 160 to 6 meters, including the newer bands, using CW. SSB operation may be found on 80 to 6 meters.

US VIRGIN ISLANDS - W5ODD/KP2 will be active from June 19 to 25. He plans to be active on CW only and mostly on the low and newer bands.

SUDAN - ST2AA is active from Khartoum.

CANADA - N6NT will be active on 160 to 10 meters from the QTH of VY1JA during the Canada Day Contest on July 1.

SOUTH AFRICA - The Special Event callsign ZS50WRC will be on the air until the end of this year to celebrate the 50th Anniversary of the City of Welkom.

SPACE NEWS

PHASE 3D DELAYED

AMSAT Phase 3D officials remain optimistic despite another delay in the launch of the Ariane 502 that is scheduled to carry Phase 3D aloft in mid-September. The European Space Agency, ESA, announced this week that the Ariane 502 launch will be delayed a couple of weeks until September 30 at the earliest while the rocket gets another engine. It's the second delay announced this year for the Phase 3D vehicle. In March, the launch date was moved from early July to mid-September. AMSAT-NA President Bill Tynan, W3XO, remains philosophical about the schedule changes. ''It's more of the same,'' he said. ''We're trying to use all the time they give us productively.''

Orbital Report On-Line said this week that a faulty component was detected in the liquid oxygen turbopump of the Vulcain engine due to fly on Ariane 504. Since the origin of the flaw was identified as a possible production defect and a similar element is known to be in the pump of the engine already mounted on the Ariane 502 rocket that recently arrived in Kourou, French Guyana, the European Space Agency and the launch consortium (CNES) have decided to remove the engine and replace it with the one originally scheduled for Ariane 503, which features a component from an older production batch.

Any delay increases the overall cost of the project, but Tynan characterized the additional cost factor of the most recent delay as ''noise level.'' He did not have a precise cost estimate. Tynan, who was at the Phase 3D Integration Lab in Orlando, Florida, said everything is going along well in the process. ''The RF equipment integrated fine,'' he noted.

For more information on Phase 3D, including pictures of the assembly and integration process, see http://www.amsat.org/amsat/sats/phase3d.html.

--ARRL Space Bulletin 18, dated 19th June, 1997

MIR FREQUENCY TEST

For the third time in less than a year, the Mir FM voice and packet frequency changed again June 15. But even as it was made, the switch to 145.985 MHz simplex was being called ''tentative'' and ''experimental.'' It also was controversial. As a result, Mir officially will end the worldwide ''experiment'' on 145.985 MHz as of June 23, but leave the frequency available as an option to the Mir crew only while Mir is over the US. Mir packet sysop Miles Mann, WF1F, said US astronaut Mike Foale, KB5UAC, now aboard Mir, can use ''any channel he wants'' when he's over the US, including 145.985, but he has to switch to 145.200/800 when Mir is elsewhere. Also, the radio will remain on the split pair when the crew is sleeping. The new frequency may be used for both voice and packet operation.

The Mir International Amateur Radio Experiment--MIREX-cited ''numerous complaints from around the world'' that the 145.200/800 split-frequency combination did not work very well as the main reason for trying 145.985. Last November, Mir changed from 145.550 MHz simplex to the split-frequency

pair. ''The radio has been almost impossible to use since November 1,'' said Mann, who called 145.985 MHz ''an excellent compromise.''

In a posting to the AMSAT bulletin board, John O'Hara, KB8TJX, in Wellsville, Ohio, reports he worked KB5UAC aboard Mir on 145.985 MHz for several minutes right after the changeover. ''Mike said that it was working out a lot better for him also. He said he had trouble sorting out the voice contacts from the packet and that the duplex was also confusing to him,'' said O'Hara, who's AMSAT coordinator for Eastern Ohio, Western Pennsylvania and the northern panhandle of West Virginia.

When the ''experiment'' was announced, Mann had expressed the hope that if the 145.985 MHz channel worked much better, the Mir crew might be more inclined to get on the air than previously. Mann said the 145.800/200 MHz split-frequency operation suffered from interference from terrestrial users and drew widespread complaints from hams in the US, Japan and Australia (145.200 MHz is a repeater output or input frequency in many countries). He said the new frequency complies with the IARU band plan for satellite operation and will reduce desensing of Mir's 2-meter station by commercial VHF activities taking place aboard spacecraft in the 143-MHz range. Mann said MIREX is working on a fix for the desensing problem, and hopes to have it in operation by this fall.

A return to the 145.55 MHz frequency used previously by Mir was rejected because it's too close to a popular simplex frequency in Europe. Switching to 145.79 MHz also was out because it's in use by many semi-permanent packet operations. Equipment aboard Mir includes a Kenwood TM-733, a PacComm Handi-Packet modem, a dual-band antenna, and a new, huskier power supply capable of powering the TM-733 to its full 50 W output. Mann said the output power typically is 10 W, however.

MIREX requests reports on the 145.985 MHz channel. Signal and interference reports go to Dave Larsen, N6CO, Box 1501, Pine Grove, CA 95665; e-mail doc@volcano.net.

CLUB NEWS

CHIFLEY AMATEUR RADIO CLUB

The club is open every Saturday at 1:30 PM.

The address is, The Good Shepherd Church Hall, at Hyatts Road Plumpton. Members guests and visitors are all welcome.

The club holds a 2 meter net on the club repeater at 8:00 every Friday night all checkins are welcome.

If you have internet , Checkout our Home page at.

http://www.zeta.org.au/ramondw

For more information ring (02) 9837 2226 or (02) 9834 1186.

Coming Events:
28 of June, Talk on the packet gateway. by Geoff VK2XJG

--The Publicity officer Michael VK2EK

ORANGE & DISTRICT AMATEUR RADIO CLUB INC

The Orange club has established a Home Page on the Internet thanks to a kind offer by 15-year old Andrew, son of Bruce Chung VK2WWW of Bathurst and the Intemet Service Provider, LiSP Pty Ltd of Lithgow.

Could you pass on to the appropriate person for use in the Division's Home Page, the address of our one? It is http://www.lisp.com.au/odarc contains most of the up-to-date details recently requested about the club and has links to WIA NSW and WICEN..

You might also note an email address for us, at our current President's business, Pronet Computer Solutions, in Orange; it is aroberts@ix.net.au

-- Peter Carter VK2ETK, Club Acting Secretar

HORNSBY & DISTRICT ARC.

The next meeting takes place, on the 24 th. June. 1997, at 8:00 pm. Meeting place is, Mount Colah Community Centre, Pierre Close, Mount Colah. (Near the Eastern Entrance to the Railway Station). This is the formal monthly meeting, taking care of all business that has arisen, during the past month. There is no talk or lecture, planned at this stage, however we sure one of the members will bring an interesting topic for an orderly discussion. ALL ARE WELCOME.

Training classes :- Phone Tony VK2BTL on 9487 3383. or John VK2WRT on 9807 2490.

The Club conducts, a net each Monday night, at 8:00pm. on the Hornsby repeater, VK2RNS. The frequency is 147.250 with a positive offset. Feel free to join in. All are wellcome. Listeners set your scanner to 147.250.

Should you wish to know more about the Club, please write to H.A.D.A.R.C. at Post Box 362, Hornsby, 2077. or contact the Publicity Officer, John VK2WRT on 9807 2490.

--Submitted by John. W. Turner VK2WRT - Publicity Officer.

TAMWORTH RADIO CLUB HOLDS ITS MEETINGS ON THE FIRST FRIDAY OF EACH MONTH COMMENCING AT SEVEN THIRTY PM IN THE SOCCER ROOMS. JEWERY STREET, TAMWORTH. GUESTS ARE ALWAYS WELCOME AND TEA AND COFFEE IS PROVIDED. THE NEXT MEETING WILL BE ON FRIDAY THE 4TH OF JULY.

A "CHRISTMAS IN JULY" GET-TOGETHER IS PLANNED FOR SATURDAY NIGHT THE 19TH OF JULY AT DAVID AND SHARON'S QTH. ANYONE INTERESTED IN ATTENDING SHOULD LISTEN TO THE LOCAL NET AFTER THE BROADCAST, ATTEND THE NEXT MEETING OR CONTACT SHARON VK2SHA FOR FURTHER DETAILS.

IF ANYONE REQUIRES MORE INFORMATION ON THE CLUB PLEASE CONTACT DAVID VK2ICY OR SHANON VK2SHA ON 067 622466 DURING WORK HOURS OR 067 691539 AFTER HOURS AND WEEKENDS.

--Sharon Margery VK2SHA, Publicity Officer

FISHER'S GHOST AMATEUR RADIO CLUB

Classes are held in Basic Electronic Theory and Morse Code every Wednesday Evening from 7:00 pm at the Campbelltown High School, Chamberlain St. Campbelltown

Also every Third Tuesday of the Month from 7.30 pm, at the Campbelltown High School, is the General Meeting night with lectures on popular subjects.

The proposed lecture agenda is:

July 15: High Speed Packet
August 19: Introduction of the Club's Web Page and a discussion on Amateur Position Reporting System (APRS) by Daryl VK2TDS
Sept 16: Fox Hunt Information Night presented by Blue Mountains ARC
Oct 21: Home Brew Competition
Nov 18: President Daryl's Slide Night on his USA Trip.
Dec 16: Christmas party
Jan 20: 2 Metre Fox Hunt

In a message dated 97-06-22 07:48:40 EDT, you write:

<< And your too stupid to ever have any kind of an amateur liscense.

OK. So, O'Brien...this is your measure of intelligence? Whether or not someone achieves the lofty goal of licensed amateur . Oh, and by the way you spelled license wrong (see above and then check with your mother or better yet a dickshunairy), oh intelligent one. You certainly don't need any license you jerk-off; l'll be happy to vouch for your amateur status anytime.

Before you go go sniffing up anyones else's pant leg you had better make sure who's on the other end. If you don't heed this advice you will be

perpetually outwitted and continually disappointed because you see, my slack jawed inbread friend, there are many more people on the net just like me who truly enjoy keeping assholes like yourself in line.

Be happy that l decided to chat with you privately about this. If you even so much as say boo to me in response, l will destroy you in front of everyone on the newsgroup and l'll do it in such fashion (and style) that you will have to change your fucking name. You, my boy, are way out of your league.

From: Oystein Eikedalen <la6yea@riksnett.no>
Message-ID: <33AED817.3B33@riksnett.no>
Source record: 195287

Hallo. I am about to match the new homwbrew 4 ele quad for 20-15-10 m.
The problem is that I cannot get the antenna higher than just over
ground level when adjusting for right resonans.
The antenna seems to have resonance on 13660, 20560 and 26700 Mhz. To
low in other words. I am aware of that the resonacepoint will probably
rise some khz when I finally get it up at 20 meters. Anybody have any
idea of how much, so the cutting/trying is not waisted ??
Tks LA6YEA

I want to put a 2M mobile in my Ford Explorer. Are there any issues other than the usual that I need to be aware of with the Explorer? It does seem to have more than the average alternator whine.

Where should I get the 12 volts? Direct from the battery, or is there a reliable way that's easier to install or get to?

6215. Public Safty Teletype???

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-24 00:00:00 UTC
From: Dave Fischer <DaveFischer@poboxes.com>
Message-ID: <33AF7902.63BA@poboxes.com>
Source record: 195091

I live in rural Minnesota. On 154.465 Mhz, I almost continuously hear what appears to be some sort of teletype coming in at various strengths. I have also noticed that when a police officer calls dispatch to "run" a license plate, the "teletype" signal fires up full scale. It would be neat to decode that and see what it is. I do have a sstv modem and HamComm (supports various teletype modes).

Does anyone have any ideas???

I cut all the connector off of my three mobiles (two Yahzoos and a Kenwood) and replaced them with two pin molex connectors from Radio Shack. Now they are all the same (and interchangable between the two cars and power supply in the house).

One of the reasons for doing this was it was encouraged by local RACES people for standardizing. There was a catch - they sent you to RS with a catalog number. If you buy their two-pin molex connector in the prepackaged male/female set, they are not the same the two-pin connectors they package separately.

To make this information I have now shared really useless, I forgot if I bought them separately or in the pairs.

Regards

I could not find your call-sign or E-mail address
therefore I well post this to the group. I have
found that Code Quick is helping me learn Morse
Code. If you are a real person and want the address
of Gerald R. Wheeler, Editor of Code Quick.
E-mail me and I will give you his address.

Accessories include the standard battery and charger, AA battery
holder, and cigarette lighter adapter. Reason: want to buy
ICOM T7A because it's smaller. (The DJ-560 has more features,
but I take it hiking and cycling, and I want something smaller.)

> Good point, but there was an educating idea there (maybe I should have been more explicit and worded it differently): don't jump to conclusions. It seems that many people have trouble with this. There seems to be a box of labels out there that people are ready to apply without much knowledge of a given situation. This is a very elementary step in the process of learning much about anything, but it is very suprising how often it is bypassed by seemingly well-informed people.

Please excuse the use of the word "asshole"
but it's absolutely necessary here.
If they can say it on TV, I can say it here.

You know we all enjoy amateur radio.

Dear Assholes - you know who you are.

When you are obnoxious on the air, propagation
is such that not THAT many people can hear you.
Most of those listening are fellow hams, thus
they form their opinions of you, and write you
off.

When you're an asshole on Usenet, however,
EVERYONE gets to hear you and see what an ASSHOLE
you are.

BEYOND this, a fair number of NON-HAMS and HAMS-
TO-BE are likely getting their FIRST EXPOSURE
to ham radio...and what do they see?

Y O U

being a total asshole in public.

Sure puts a good face on ham radio. Think before
you hit enter. You're doing more damage to
ALL hams, including yourself, than you think.

YOU are potentially damaging the future of ham
radio. Worse than the code/no-code issue,
worse than 3.8945 MHz.

As much of an asshole as you may be, you probably
don't want to hurt ham radio.

THINK before you type. Remember who sees it.

> > abilities) and those who won't play the political games get no recognition
> > at all. It's the public who gets hurt by this in times of emergency.

I don't think so. I know of many local agencies, in addition to the state level, that issue ID cards to RACES members. In some RACES organizations politics are a problem - but then all RACES organization are operated under the authority of a government, so what do you expect?

There are plenty of RACES organizations that effectively operate with a minimal amount political trouble. Some are pretty bad.

I use RACES as my example because they operate under the control of "local" government and members will be functioning inside the parimeter of an emergency. That as opposed to ARES, which has a different, though equally important job that does not necessarily require them to "work inside" the emergency area.

Card carrying does not necessarily indicate that someone is a "wannabe" anything. As mentioned before, there is a very good reason for registering disaster service workers - insurance. Local authorities may expose themselves to unacceptable levels of liabilty by letting any "joe ham" come in to help. Even if it is the only significant thing accomplished by registration, volunteers need to be covered by workers comp, and have some level of training.

You don't necessarily need "one card" that is standardized throughout the state. If local governments want to create their own system, you can let them do it. Here in California you might have hams that are part of the state OES group, a county group, or a local city group. All of their ID cards might be different but they identify the holder as a registered volunteer.

Like other parts of the country, California has it disasters. Earthquakes and annual forest fires. Amateur radio resources are often sent in from other areas as part of mutual aid. No one is going to let you through a road block without an ID card. And you're not supposed to "just show up". You should be sent by the authority that runs your organization.

The IDs serve an important function as part of managing an emergency. It should not be written off as some kind of "make hams feel important" program.

> I have to agree with you Don. Listening to 2 meters today is much like
> listening to CB in the late 70's. Amateur radio operators are becoming the
> architects of their own demise, unfortunately.

I don't see what the state of two meters in certain areas has to do with
this discussion.

> "This year will go down in history. For the first time, a civilized nation
> has full gun registration. Our streets will be safer, our police more
> efficient, and the world will follow our lead into the future."
> - Adolf Hitler, 1935

Please don't even mix the need to protect workers and emergecny
agencies, and maintain a incident command system to a gun control
agenda.

3rd annual IOTA/DX convention

by Russian Robinson Club
with association of Russian Contest Club and
Soyuz Radiolyubitelej Rossii (the Union of Radioamateurs of Russia)

Dates August 29 to 31, 1997
Place Voronezh city, just 300 km south-east of Moscow
Organizing committee RN3QO, Serge Popov
UA3QDM, Igor Zakharov
RW3GW, Valery Sushkov

Convention program

August, 29 Friday Day of participants' arrival and registration

4 p.m. - 7 p.m. Russian Contest Club (RCC) organizational
discussions, DX and IOTA related videos' preview
7 p.m. - 8 p.m. Dinner
8 p.m. - Discussions

August, 30 Saturday

9 a.m. - 10 a.m. Breakfast
10 a.m. - 11 a.m. Registration
11 a.m. - 2 p.m. IOTA/DX/CONTEST FORUM
2 p.m. - 3 p.m. Lunch
3 p.m. - 6 p.m. IOTA/DX/CONTEST FORUM

Preliminary list of speakers:

UA3QDM Igor Zakharov Welcome word
RU3AX Boris Stepanov Word from SRR's president
RW3GW Valery Sushkov 5 years of Russian Robinson Club
(the official Russian IOTA club)
UA9OBA Yuri Zaryba
RA3AUU Igor Booklan VK0IR, DXpedition to Heard Island
UA3AB Andy Chesnokov AH4/AH0W, DXpedition to Midway Island
RV3DZZ A. Sherbinin R3AA/9, Ski-pedition to Ermak Island (AS-109)
RA3DEJ Dmitry Ognisty RF0Z, Expedition to Starichkov Island (AS-095)
and RI0TA expedition
RW3AH Andy Fedorov 9X/RW3AH, trip on duty to Rwanda

and much more!!!

7 p.m. - 10 p.m. Honarary Dinner to celebrate 5 years of Russian
Robinson Club

August, 31 Sunday

9 a.m. - 10 a.m. Breakfast
10 a.m. - 11 a.m. Russian Robinson Club vs. Russian Contest Club
Football (socker) match
12 a.m. Russian Robinson Club prizes give-away
Russian Island committee presentation
DX/IOTA video preview
2 p.m.- 3 p.m. Lunch

Robinson Club Museum, photo gallery, club stations R3RRC and R3IOTA will be on during the convention.

All radioamateurs worlwide are more than welcome to come over. We encourage you to inform us about your arrival before August,20. Your DX/IOTA/CONTEST stories/videos are always welcome.

Look for Internet Phone at http://www.vocaltec.com/ . You will also need
to get (despite what the article said in QST) Repeater Link. This can be
found at http://mebcs.ezl.com/rptrlink/ .

Test before you buy. When I used the Rptrlink software about 9 months ago,
it was real buggy and caused Iphone to crash. I bought Iphone and use it
almost daily but never bought rptrlink.

Hi, Betty.

In a previous response, I did not send you a complete location for my Morse code program, International Morse Code Processor. It can be downloaded from either of the two locations below.

This first location accesses the program directly for download.

http://www.simtel.net/pub/simtelnet/win3/ham/imcpw313.zip

This second location accesses the DIRECTORY from which you can download the program. Just look for the file IMCPW313.ZIP.

http://www.coast.net/SimTel/win3/hamradio.html

Below are the program's features:

IMCPW (International Morse Code Processor for Windows) v3.13 is a Windows 3.1 & 95 compatible program which translates program-generated/user-defined text and text files to Morse code. Code speed is adjustable from 3-50 wpm with a character speed of 10-50 wpm for Farnsworth code. Keyboard Copy window included for copying code from the keyboad. "Barred" characters implemented. User can define any prosign. Select characters and prosigns in groups or in any combination. Includes a comprehensive help facility, a main menu, four popup menus, and eleven code practice lessons. It is Fully customizable from the Options menu. A Sound card is not required. Requires 964K of free hard disk.

Betty, I have also read a couple of discordant responses to your posting. I hope you won't let these few negative responses dampen your enthusiasm for learning the code.

Remember: Learn to recognize the SOUNDS of each character. Also, concentrate on only 4-5 characters at a time. When you can recognize those characters on a regular basis, add 4-5 more characters to the list. Continue studying in this fashion until you have included all of the required characters. Once you can recognize all of the characters, then you can increase your code speed.

It's best to use the Farnsworth method of learning the code. With this method adjustments are made to the actual CODE speed and the CHARACTER speed. As the character speed is increased more time duration is added between each character and word. The advantage of the Farnsworth method is that the SOUND of each character always remains the same regardless of the actual code speed.

I would recommend that you begin studying the code at a CHARACTER speed of 13-18 wpm with a CODE speed of around 3 wpm. How high you adjust the character speed will be dependent upon your ability to recognize the sound of a particular character. Some folks will have to start with a character speed of 13 at first (maybe even less) until their ears are trained to hear the rhythm of each sound. However, if you can distinguish each character at a character speed of 18 then start there. That way, the actual rhythmic sound of each character will remain the same right on up to a code speed of 18 wpm.

73 and Good Luck,
Lindsay Foster

This idea that the entire world must be insured, no matter if people are drowning in floods or being lifted into the air by hurricanes and tornadoes just makes me sick. We need to cut through the red tape. Perhaps the recent Federal regulations protecting "emergency workers" will do it - something should.

> And you're not supposed to
> "just show up".

There's another dirty little rathole in the architecture of our ultimate demise. Of _course_ you should "just show up". Sitting around waiting to be called is nonsense. No wonder emergency workers are always shorthanded with this sort of philosophy coming to the fore. If you're 150 miles away and capable and willing, you will have to "just show up" cause there isn't anyone going to know about you otherwise.

The Red Cross and Police and Fire and others are simply going to do what they can on their own if we keep this up, just out of frustration with trying to work with the 10% of those that _could_ help actually helping, while the remaining 90% that don't want to jump through the hoops of red tape that are being set up are prohibited at the time of the emergency from helping.

Nothing like a good beaurocracy to screw up what was once a great resource.

The PICTURE DX BULLETIN #14 JULY 1997

Thanks for info: KL7J, RV9CKR, HA9OA, SP4KM, WB2OSZ

*One of the most remarkable SSTV contacts made in the past month was between KL7J and ZS6XJ via longpath! This means crossing the two poles! QSO was made on 20 meters.

*5B4JE, ARIS, is now active in SSTV. Look for him on the usual frequencies. QSL via buro or CBA.

*More activity in Croatia: 9A2TK, TOM, 9A3IB, MIKE. And of course 9A3TB Krsto. 9A3TB QSL is sure via buro.

*VK4KIW, Dave, is daily on 21.340, the only frequencie he can operate.

*And yes, there is SSTV activity in ZONE 19: look for UA0JBS and UA0JV.
I m dreaming already of my WAZ award SSTV ...hi

*OH0/DL5HCK, Klaus, has been active from the ALAND ISLANDS. I regret the Picture DX Bulletin was not informed about this activity! If you plan to go to a rare SSTV country with your SSTV gear please let us know !!!

*9L1GA was worked in Europe. I wonder if this was a real one or a pirate?? No more info so far.

*HF0POL, Marek, from South Shetlands works SSTV on request. QSL via SP3FYM.

*EU6TV, Nick, from Beylarussia is a newcomer in SSTV. Qsl via: Nikolay, Frunze 58, Vitebsk 210009 , Beylarussia.

*I see several stations working with registered software , but not
registered to their own callsign! Remember software-producers are putting
a lot of time in improving their programs, so it s really not fair to use
pirate copies.

*Hot news: ZB2/ON4TH will be QRV in SSTV from Gibraltar. Look for him 7-8-9 july 1997 on the usual SSTV frequencies. QSL via buro or CBA. Sponsored by the Picture DX Bulletin.

*G4IJE proposes 50.230 Mhz on the 6 meter band as SSTV frequency.

*You can download from internet now a demo version of the TBL SSTV magazine:
http://member.aol.com/tblclub/index.htm

*The new version of EZ and Pasokon (3.1) are now also available.
(ftp://ftp.ultranet.com/pub/sstv)

*The ON4VRB SSTV repeaters on 28.700 USB and 433.925 FM are now linked, so working as a transponder! Good luck with it !

*SSTV QSLs received this month: V63BM, UK9AA, UK8AXA, FM5DR
*The pictures of this month: 5B4JE, UA0JV, OH0/DL5HCK, EU6TV, GM4NHI, GW0JZN. Look for them on my website:
http://www.ping.be/ON4VT

*For those who go to Friedrichshafen Germany, see you there! The others , see you in SSTV!

6244. ARLB033 Volunteers protected

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-24 00:00:00 UTC
From: w1aw@arrl.org
Message-ID: <$arlb033.1997@arrl.org>
Source record: 195120
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

SB QST @ ARL $ARLB033
ARLB033 Volunteers protected

ZCZC AG33
QST de W1AW
ARRL Bulletin 33 ARLB033
From ARRL Headquarters
Newington CT June 24, 1997
To all radio amateurs

SB QST ARL ARLB033
ARLB033 Volunteers protected

Ham radio volunteers stand to benefit from ''The Volunteer Protection Act of 1997,'' signed into law June 18 by President Clinton. The measure aims to provide Federal protection from ''frivolous, arbitrary, or capricious'' lawsuits filed against individuals affiliated with nonprofit organizations and government entities and acting in their volunteer capacities. This would include members of the Amateur Auxiliary and volunteer examiners, as well as other volunteers.

In general, the new law will exempt a volunteer of a nonprofit organization or governmental entity from liability for harm caused by an act or omission of the volunteer on behalf of such organization or entity if:

The volunteer was acting within the scope of his or her responsibilities at the time.

The volunteer was properly licensed or otherwise authorized for the activities or practice in the State in which the harm occurred.

The harm was not caused by willful or criminal misconduct, gross negligence, reckless misconduct, or a conscious, flagrant indifference to the rights or safety of the individual harmed.

The harm was not caused by the volunteer operating a motor vehicle, vessel, aircraft, or other vehicle for which the State requires the operator or owner to possess an operator's license or maintain insurance.

The law, known as Public Law 105-19, becomes effective September 16, 1997.

As I understand it, the smoothed sunspot number is the average of 13 monthly readings, centered over the month in question. As we don't yet have data for the rest of the year (when I suppose the sunspot counts will be higher), no smoothed sunspot number can yet be calculated.

I guess we'll have to wait until the end of the year, and then we'll know the SSN for June.

Chris

My next-door neighbor had an alternator go out, and the dealer wanted
$175 for a replacement. Autozone said $65, and an alternator repair

place replaced the regulator and charged him $25.

Let's hope this poster is right.

Don't try to hide behind "messenger" to be dumb, boy, you ORIDINATED
the message.

The FCC R&R say "nothing in this part" is to prevent etc.
IN AN EMERGENCY, ALL BETS ARE OFF.
Being late for dinner is not an emergency.
A lady trapped under a sliding car is an emergency.
All you got to do is show responsibility in judgement as to
what is an emergency, and you got no sweat. It's in the book.

Of course you are correct.
I should have sourced it.

Source unknown.

This bishop invites a young priest over for dinner. During the meal,
the priest can't help noticing how attractive and shapely the
housekeeper is. Over the course of the evening he starts to wonder if
there's more between the bishop and the housekeeper than meets the eye.
Reading the young priest's thoughts, the bishop volunteers, "I know what

you must be thinking, but I assure you, my relationship with my
housekeeper is purely professional."

About a week later the housekeeper comes to the bishop and says,
"Excellency, ever since the young Father came to dinner, I've been
unable to find the beautiful silver gravy ladle. You don't suppose he
took it, do you?"

The bishop says, "Well, I doubt it, but I'll write him a letter just to
be sure." So he sits down and writes: "Dear Father, I'm not saying that

you 'did' take a gravy ladle from my house, and I'm not saying you 'did
not' take a gravy ladle. But the fact remains that one has been missing
ever since you were here for dinner."

Several days later the bishop receives a letter from the young priest,
which reads: "Your Excellency, I'm not saying that you 'do' sleep with
your housekeeper, and I'm not saying that you 'do not' sleep with your
housekeeper. But the fact remains that if you were sleeping in your own

bed, you would have found the gravy ladle by now."

6256. FOR SALE: Yaesu FT-890AT w/base & mobile accesories

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-24 00:00:00 UTC
From: mconner2@utk.edu
Message-ID: <867198305.22534@dejanews.com>
Source record: 195132
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc

FOR SALE:

Yaesu FT-890AT in very good condition. Has built-in antenna tuner
(great for mobile use), built-in cw keyer, 100 Watts output, general
coverage receiver, and all mode transmitter. Comes with hand-held mic.
Still have original box and owner's manual. I always found this rig to
have a really great receiver.

Also for sale:

Yausu YS-60 SWR + Power meter (matching color to 890)
Astron RS-50M (with meters) (barely used)
Bencher Keyer BY-1 (barely used)
Hustler Mobile resonators for:
80, 75, 40, 30, 20, 17, 15 and 10 meters (low power models)
and two masts - one stainless steel that bends in middle to make changing
coils easier and other is fiberglass covered.
Also have a mast mount for base use.
(all resonators in good condition and worked well for me mobile and
base!)

and I'll throw in a 75' length of 9913 coax (no connectors).

Prices dependent on who pays shipping, but figuring:

FT-890AT $750
YS-60 $ 70
RS-50M $175
BY-1 $ 50
Hustler $140 for all including masts.

Would prefer to sell entire package. Am selling because work hours are
too long and I don't travel much any more and the cash would be useful.

Please e-mail me for further details, or call in the afternoons at work:
(423) 974-0123.

Thank you!

I'm not a ham (SWL) but have serviced ham gear, CB's and other
assorted stuff. I've needed lithium coil cells (solder-tab type) and
have found them from DigiKey Electronics at 1-800-344-4539.
Give DigiKey a call and they'll send a free catalog to you.

here are some other parts sources which I have used at the shop
and are good for other electronics parts:

MCM Electronics - 1-800-543-4330
Future Electronics - 1-800-655-0006
Hosfelt Electronics - 1-800-524-6464
MPJ Electronics - 1-800-652-6733
All Electronics Corp - 1-800-826-5432

Guve the above no's a call. All will send you a free parts and
equipment catalog!

Pom E Granate

ps: If you know of any other parts/test/equipment retailers with
catalogs, pse e-mail their info & 1-800 #

I would not call it one-way communication so I did not consider it a violation of 95.413(a)(4) for a CB to be linked to a 2 meter rig. However I figured it was a violation of some CB rule.

I am confused by your view of 97.113(e). It is illegal of for an amateur station to retransmit signals from another service, but I could not find anything that prohibits a CB from such signals.

If an amateur station retransmits signals from the CB serviceit s violation of 97.113(e). But if a CB station retransmits amateur signals its a violation of what part/section?

I never said there were no differences. I simply said that the rule provide for both amateur and CB to have phone patches.

Where does part 95 say that a CB must be manually keyed during a phone patch? It simply prohibits a phone patch by remote control - the connection must made manually. Even on amateur radio a control operator must be at control point of a station (including a repeater) during a patch. The amateur control point can be remote - the CB must be local.

Perhaps the FCC does require you to manually key whe they "you must supervise the operation of the transmitter". I would interpret that as just meaning I have to be there to make sure all the rules are followed. The FCC wrote the CB rules in pretty simple language. I would not expect the phrase "supervise the operation of the transmitter" to mean much more than "watch over it and intervene if required". If they really wanted you to manually key the transmitter I would have expected then to spell it out like "You must manually operate the transmitter" (is vox illegal on CB?)

Really - all I was trying to point out was that "crossbanding" between CB and amateur radio is prohibited by part 97. It may also be prohibited by part 95 but I wasn't to worried about looking it up. Paul tried to compare it to amateurs crossbanding between amateur bands - I

just thought I would point out that there was a difference. That's all.

Regards

> tnx 73 Allen KQ6IY
I bought a GAP Titan. It works as described, and as you'd expect for
a multi-band vertical. Bandwidth is 100khz on 80 meters, and to
adjust it to the part of the band you want, you have to get a specific
capacitor unit from GAP, so make sure you order it with the one you
want. Bandwidth on 40m is over 15okhz, and I get pretty much all of
the bands above that with less than 2:1 swr.

It went together easily, following the instructions in the book, and I
feel it is worth the price. I have not done side by side comparisons
with other verticals, but it is easily as good on 40m as my dipole
(full-sized) at 25 feet.

Photogenic? I think the thing looks very hi-tech. It impressed the
hell out of the CB-er next door...

good luck
Dale

Hi and thanks for reading this. I operate a 440 repeater in NJ. For the last 3 months I have been plauged with interference, at first it was intermintant, now it is just about continious. The problem is that my noise floor is up about 30db . I deterimened this with a spectrum analylizer. I even hooked up 2 diffrent mobiles at the site and the s meter sits on S-9 . this noise level is from 435-450 across the whole ham band.

After eliminating all the other transmitters at the site, I took a ride to some areaa that are prime covereage for the repeater. Two miles away on a hilltop within a 4 block radious, I found the same type of interference, my s-meter on my mobile is pinned across the whole band with no audio coming out of the speaker, just like at the repeater site.I did not have a steppable attenuator , but instead I pulled the antenna off the mobile , and hooked up an unterminated 4' rg-58 jumper. Guess what it was still able to recieve a s2 to s4 signal. I am confident I am in the right area, now I have to determine what type of device could create broadband noise. could it possible be a cable tv problem, bad amp. leaky cable , something in someones home. Ant new style baby monitors on the WHOLE ham band nowadays Any suggestions Please E-mail me back.At this point nothing can be ruled out

Thank You
Bill,WR2M

6289. Pop Comm 8/97...Harold Ort on Stuffy Ham Operators

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-25 00:00:00 UTC
From: mnmaniac@aol.com
Message-ID: <19970625011400.VAA13136@ladder01.news.aol.com>
Source record: 195045

Just got my new Pop Comm in the mail today. This month, the subject of editor Harold Ort's column ("Tuning In") is today's sad state of ham radio in general, and in particular how YE OLDE FAHRTZ are doing their best to kill the hobby with their "holier-than-thou" attitudes toward new amateurs and would-be hams.

The last two paragraphs say it all:

"Can you seriously despise folks for operating on radio's fringes; freebanders, renegades, outlaws...when those making the rules, it could be argued, are no better: The lawmaker, trooper, judge, and jury?"

"If you were a newcomer, what would you think? My mom would probably say, 'Sonny, some of the old geezers are just angry that they weren't born today and can't start out on the radio like the new folks can.' Come to think of it, she might be right."

>operator responsible? I'm just about ready to go break somebody's nose,
>this is really pissing me off.

Amateurs rarely use CW on VHF frequencies (and when they do, they use very large antennas which would be obvious to you!). Cable channel 39 is in the general vicinity of 300MHz, which is assigned to the military. It could be some kind of military navigation beacon. More likely, it's the second harmonic of a commercial paging transmitter. With the incredible popularity of pagers, there are a LOT of high-powered paging transmitters all over the place. And they identify themselves with tone-modulated CW. (not the same kind amateurs use -- and a kind that's MUCH more likely to be decoded by your TV)

Another possibility is that the satellite receiver used by your cable company is intermittently drifting off frequency. Satellite uplinks are also required to identify themselves with tone-modulated CW.

Either way, if you need to break a nose, it needs to be your cable operators'.. Cable channels between 14 and about 65 use frequencies that are actually assigned to other radio services. Cable operators, and their customers, are allowed to use other people's frequencies *if* they accept any interference they receive from the licensed users. With the non-existant shielding in most consumer electronics, clearing interference from these "superband" and "midband" channels would require the shutdown of police, fire, taxicab, paging, aircraft, and just about every other VHF and UHF radio service...

Typical Deignan response. Instead of debating the issue, he attacks the
messenger...who, in this case, didn't even write the article.

>>"Can you seriously despise folks for operating on radio's fringes;

>Yes, I can despise those folks. They are criminals.

They must be doing something right. The number of freebanders is
increasing, and will continue to do so as the cycle imporoves. Meanwhile,
the number of beepers continues to drop off as "YE OLDE FAHTRZ" get the
silent key.

Get a bucket cuz I guess this will make you puke.

My understanding of the recent change in federal law will protect volunteers from being sued in many cases. I did not see where it will protect the governement agencies the volunteers are assisting.

If Joe Ham is helping during a forest fire and is injured or killed, who pays? You can't say something like, "Nobody pays. The amateur should know the risks of being an emergency volunteer." But do they? How do we know they understand? How do we know a dead ham's family will "understand"?

In the RACES environment you may be an unpaid volunter but you are working for someone - a government agency. They have to treat you like an employee in many regards.

> while the remaining 90% that don't want to jump through the hoops of red
> tape that are being set up are prohibited at the time of the emergency
> from helping.

There is more to providing emergency communications assistance than just having an amateur license. If you want to help send health & welfare traffic (an important job that I actually like to do) then just show up. You can help other hams doing that outside the emergecny perimeter.

If you want to assist within the emergency itself then you need to plan on fitting into an incident command system structure. Just about every emergency service agency uses a version of ICS. Amateurs have a place it that organizational structure - but if you want to be part of that system you need to be part of it BEFORE there is an emergency. If you "just_show_up" you will likely just become a financial and/or operational liability.

Amateur don't set the rules. If this beaurcrcy leads to "our demise" it will be our own fault for not adapting to the changing needs of the agencies we support. The "hoops" are not that difficult to pass. Those who are not willing to jump a little in advance are not the one's I would want to deal with when "shit hit the fan".

Think like boy scout...be prepared.

Regards

Why do you need to contact Fisher? (are they even still in business?)

This is typical in low-end electronics, but it can be solved. Most hams that have been around for a year or two could solve it (or greatly reduce it) for you in a heartbeat. If you know any experienced hams, try to contact him or her.

First, have you done any checking to see what the source of the RF is? Is it coming in on the AC line? Are you using the video feed into the TV or the composite signal from the VCR into the TV? Are you using good, shielded cable (in either case)? Are your connections good?

If all of the above checks out, have you tried winding the offending lead around a ferrite core for several turns?

If you are using the composite output from the VCR, have you tried a simple high pass filter? Does your "ham" equipment have a low pass filter? How about a good ground?

Contact a ham with some knowledge and he will go over this with you and you should be able to solve it in 30 minutes with maybe $5 of Radio Shack parts, if that. There is no point in contacting Fisher until all the easy fixes have been tried (99% of the time these will work).

MD:

He didn't say that.

If your cellphone is available (you have it with you and you are in the service area) then use it. It would be a "normal means" of emergency communication. Use your HT - yes - and use amateur frequencies if you can. It may not work. But are you dumb enough to stand there and let someone possibly die while you call "CQ help me" "Mayday" or whatever and nobody is answering you on 2 meters?

I have been in a place when I needed help and I couldn't reach amateurs (even when I could hear them) and my cellphone would not work. If there had been a life threatening emergency in this location I would have *legally* used my radio in whatever fashion would get me help. Fortunately my situation was not life threatening and I was able to hike up a hill in the rain to reach a known ham repeater and call for assistance.

I am beginning to think you must spend a lot of energy concocting your absurd rationale on some issues. Doesn't it make you tired?

How in the world can a person operating an unlicensed radio station on the FM commercial band in any way affect your enjoyment of your hobby? Unless this person is blocking your favourite radio station, or disturbing your tv, or leaking a harmonic into your of your HAM frequencies, what difference does it make?

Just because you have a Ham license doesn't make you an informant for the FCC. And it doesn't give you the right to police the entire frequency spectrum from 440 Hz to gamma rays.

You got a drivers license? Then go complain that people are driving over the speed limit. Or do you drive over the speed limit too?

Pirate radio isn't hurting Amateur radio at all. As a matter of fact, they can do more good by helping each other.

QST de W1AW
Space Bulletin 020 ARLS020
>From ARRL Headquarters
Newington, CT June 25, 1997
To all radio amateurs

SB SPACE ARL ARLS020
ARLS020 Mir crew safe after collision

The crew aboard the Mir space station--including US astronaut Mike Foale, KB5UAC and two Russian cosmonauts--was reported safe and in good shape today after an unmanned Progress M-34 cargo rocket struck Mir as the crew was trying to re-dock the rocket during a practice run. NASA spokesman Rob Navias says there are no plans to abandon Mir. A Soyuz spacecraft is docked at the station to provide an escape route.

Damage was confined to the Spektr module, which has been sealed off from the rest of Mir. That module reportedly contains the SAFEX 70 cm Amateur Radio repeater and most of the US experiments aboard Mir. NASA reports the crew is closely monitoring the damaged module.

According to VideoCosmos Co of Moscow and Novosti Kosmonavtiki magazine, the mishap occurred at approximately 0918 UTC. The cargo spacecraft sheared off half of a Spektr solar panel and damaged the module itself. The resulting leak caused the space station to begin to lose pressure, but the crew was able to rapidly close the hatch to the Spektr module and repressurize the unaffected compartments. The crash also damaged thermal control radiators on the Spektr module.

Vera Medvedkova, a spokeswoman for the Russian Mission Control Center near Moscow, said that at the time of the crash, the crew was using manual control to practice docking the Progress rocket. The crew had released the trash-filled rocket Tuesday and was attempting to re-dock it. Russian space officials now are figuring out how to fix the damaged Spektr module and what to do with the cargo ship, which continues to orbit Earth near the space station. NASA says it's working closely with the Russian flight team to determine the appropriate action.

In addition to Foale, the Mir is staffed by Russian cosmonauts Vasily Tsibliyev and Alexander Lazutkin. Foale has been aboard Mir since mid-May, when he replaced Jerry Linenger, KC5HBR. Linenger had his share of problems during his four-month stay on Mir, including a fire and coolant-system leaks.

Well Burps been doing all the things you despise for at least ten years
that I know of. your trying to be newsgroup savvy after reading a week
of posts. Noble idea but it won't fly. I finally got sick of the
Burp,Jim and Jeff show and I'm exercising my right to post. I tried to
find your call in last winter's qrz and it was'nt there so obviously you
just got your call. If you want to be a dumb lemming and follow Burp
while he plays the disenchanted ham radio flute be my guest. Just
remember you will always be judged by the company you keep. Next post
try to cover more than a week of history. I just started slapping Burp
around here. Now take him and get back in the closet WITH him.

I would like to have some help for getting the radio license
in "Canada" (not U.S.).

What do you have to know for:

- Aeronautical License
- Marine License
- Land License

Are the tests going to be similar to the ones we have in amateur radio
?

Also I would like to know what kind of things you can do with these
licenses.

Thanks for your help !!

-
-> > Well,
-> > It is certainly a sad day for ham radio in general...
-> > I was tuning across the 11 meter band with my FRG-7 and encountered a
-> > retransmission from a local simples 2 meter frequency. This, in and of
-> > itself, is nothing new. What is new (to me anyway) is the fact that a HAM
-> > was doing this.
-
-> Eric,
->
-> Forgive me for my ignorance in this matter but, isn't this the same
-> thing as cross-banding? We do that on 440-2m, 220-2m, and vice versa.
-
-
-Not really. Cross banding from one ham band to another is not
-prohibited.

Correct, the key is ONE HAM BAND TO ANOTHER.

- Is
-> there a legal issue involved with what your "friends" are doing? Obviously
-> they have identified themselves properly or you wouldn't know they were
-> hams.
-
-> Why not send a
-> letter to the FCC?? Or hell, if you can explain to me what they're doing
-> that's illegal, I'll send the letter!!

-I can't find anything specific in part 95 regarding the CB side of this
-(but I didn't look very hard), but 97.113(e) prohibits an amateur
-station from retransmitting signals emanating from any type of radio
-station other than an amateur station (with some exceptions). In other
-words, amateur stations are prohibited from retransmitting CB traffic.

No, you didn't look very closely! See the attached portion of FCC
Part 95 below. Surly you can define this as ONE WAY COMMUNICATIONS
on CB, right? However, your reference to 97.113(e) also covers
the transmission of 2-meter traffic on CB.

-There may be a loop hole... if you were using a phone patch. There are
-provisions in part 95 that allow a CB radio to be interconnected for
-phone patching. Amateurs can run phone patches as well. If all
-requirements are met, I guess one could "cross band" CB to amateur via
-phone lines. Kinda far fetched - I would be that what Eric is hearing
-is being done legally.
-
-Regards.

There is a BIG difference between the rules governing phone patching on
CB and Amateur Radio. Amateur Radio may have automatic means of
interconnection and CB may not. You may connect you CB to a telephone
but you must be there AND manually key the transmitter.

This information taken directly from FCC Rules Part 95, available at
http://apollo.netservers.com/~two-way/faq.htm

Kevin, WB5RUE
wb5rue@amsat.org <- my real address

Here are the relevant portions of FCC Part 95

RULE 13 - Illegal Communications

{A} You must NOT use a CB station-

1.[1] in connection with activity which is against federal,
state or local law;
2.[2] to transmit obscene, indecent or profane words,
language or meaning;
3.[3] to interfere intentionally with the communications of
another CB station;
4.[4] to transmit one-way communications, EXCEPT for emergency
communications, traveler assistance, brief tests (radio
checks) or voice paging;
5.[5] to advertise or solicit the sale of any goods or services;
6.[6] to transmit music, whistling, sound effects or any material
to amuse or entertain;
7.[7] to transmit any sound effect solely to attract attention;

RULE 20 - Telephone Patches and Telephony with CB

{A} You MAY connect your CB station transmitter to a
telephone if you comply with ALL of the following:

[1] You or someone else must be present at your CB
station and MUST-

(i) manually make the connection (the connection cannot be
made by remote control);

(ii) supervise the operation of the transmitter during the
connection;

(iii) listen to each communication during the connection; and

(iv) stop all communications if there are operations in violation of these rules.

[2] Each communication during the telephone connection must comply with all of these rules.

[3] You must obey any restriction that the telephone company places on the connection of a CB transmitter to a telephone.

{B} The CB transmitter you connect to a telephone must not be shared with any other CB station.

{C} If you connect your CB transmitter to a telephone, you must use a phone patch device which has been registered with the FCC.

Well 'Burt' since you seem to be the biggest mouth in all of this
mess. You can take my advice with a grain of salt. You obviously have
nothing better to do. It seems that the attitude you display here is
best suited for CB. This is just like 75M , everyone is tough over the
radio and over the phone lines. Yes I think you should get a life, or
atleast another hobby. Key word. "Hobby" .

Tom, don't waste your time trying to get a sensible answer out of Barry -
he's evidently a congenital idiot, whose feeble mind overloads when he
sees American spellings (e.g. "20 meters" as distinct from "20 metres").
He never contributes anything of any worth to this newsgroup, preferring
to troll it when the aus.religion and aus.politics mob ignore him...

Message-ID: <19970626025501.WAA23466@ladder02.news.aol.com>
Source record: 194965

Dear Cracked,
Quit your bithching and call your cable company. More that likely there is a poor, or missing, ground connection on or near your equipment. I had a similiar situation when I lived in southern California. I was running a 4-1000A amplifier and getting the full legal limit output. All the local people were on cable. One neighbor, a block and a half away complained that I was tearing up their cable TV picture and would I please stop transmitting at this particular time of day, as this was the only time they could watch TV. Well, my immediate neighbor and none of the others were complaining, so I advised them that THEY had a problem with their cable system. They refused to call the cable company for a very long time. Every night, they would call again and ask me to cease. Every time I again urged them to call the cable company. Finally, after about four months, they call the cable company. A technican from the company came out to their house, called me on the phone to get on the air and transmit. I did so and sure enough, he found an open ground on their system that was giving them the problem.

I am not saying that this is your solution to your probem, but I think it bears looking into. Looking for the transmitter and antenna of the offending party might be difficult. Apparently, someone is using a disguised antenna or one that is hidden in the attic or such.

Good luck, I hope you get the problem resolved.

Fried Heyn WA6WZO ARRL SW Division Director sent me this somewhat large listing of Field Day sites in the LA, Orange, Riverside, and San Bernadino counties. My previous posting last week only contained Orange County sites.

For those unfamiliar with Field Day it is being held Saturday, June 28th 11am to Sunday, June 29th 11am. Best time to visit the sites listed below is on Saturday the 28th. Before 11am clubs are usually busy setting up and after 11am the contest is on.

Even if you are a Novice, NoCode Tech, etc. you will have the opportunity to work the HF bands at these Field Day sites as a guest operator under the supervision of a higher licensed operator present.

Here they are:

LOS ANGELES COUNTY

Baldwin Hills ARC: VA Hospital (near Wilshire and 405)Westwood

Westside ARC: Mar Vista Park (Palms Blvd and Sawtelle)Mar Vista

Culver City AR Emergency Group: Fire House (Culver and Washington)Culver City

Hughes-El Segundo: Hughes (El Segundo and Continental Blvd)El Segundo

South Bay ARC: Torrance Mem. Hospital (near Lomita and Hawthorne)Torrance

Northrop ARC: Landfill (near Crenshaw and Hawthorne)Rancho Palos Verdes

Palos Verdes ARC: Peninsula H.S. (near Hawthorne and Silver Spur)Rolling Hills

TRW (+ Xerox, Douglas, & AeroSpace) ARCs: Friendship Park (near 9th/Western)San Pedro

United RAC: Ft. MacArthur (near 36th and Gaffey)San Pedro

USCG Auxiliary: Coast Guard Station (near end of Terminal Island)San Pedro

L.A. ARC: Cal. State/Dominguez Hills (Victoria and Avalon)Carson

Downey ARC: South Middle School (12500 South Birchdale)Downey

ARA of Long Beach: El Dorado Park (Spring and Studebaker)Long Beach

Disneyland EARS: Walt Disney Imagination (near Flower and Sonora)Glendale

Nestle ARC: Incarnation Church (Central and Dryden)Glendale

Pasadena RC:Cerro Negro Peak(end of Sugar Loaf Drive)La Canada-Flintridge

San Gabriel Valley RC: Arcadia Co. Park (405 South Santa Anita)Arcadia

Monterey Park ARC: Water Tank (end of Russell St.)Monterey Park

Rio Hondo ARC: high hill via Police Academy (near Rio Hondo College)Whittier

San Fernando Valley ARC: Nike Base site (end of Browns Canyon Road)Chatsworth

---

ORANGE COUNTY

LARA of O.C.: Sunset Marina (2901 Edinger)Huntington Beach

H.B. RACES: Central Park (Talbert and Gothard)Huntington Beach

West Coast ARC: Fairview Park East (Placentia/Estancia H.S.)Costa Mesa

Newport Beach RACES: Mariner's Park (Irvine and 19th)Newport Beach

Irvine DEC: City Hall (Harvard and Barranca)Irvine

O.C. ARC: USMC Air Station (near Red Hill and Barranca)Tustin

CLARA: Rancho Santiago College (17th and Bristol)Santa Ana

Anaheim ARA+GG Elks ARC:Garden Grove Elks Club(Newhope/Trask)Garden Grove

HDSCS: Bergen/Brunswig Corp.(4000 Metropolitan Drive)Orange

Western ARA: Walter Knott School (near La Palma and Western)Buena Park

Fullerton RC: West Coyote Hills Tree Park (Parks Rd/N of Rosecrans)Fullerton

O.C. RACES: Craig Regional Park (Imperial and State College)Fullerton

Placentia Ham Watch: School Service Yard (Tustin/Orangethorpe)Placentia

Yorba Linda RACES:Water Dist. radio tower(west end of Green Crest/Skyridge)Yorba Linda

Beach Cities Wireless Society:Marblehead Park/Avenida Vis Hermosa, San Clemente

South Orange ARA: James Gilleran Park(Olympiad south of La Paz)Mission Viejo

---

RIVERSIDE COUNTY

Corona/Norco ARC: Foothill Elementary School (300 Buena Vista) Corona

Bomb Squad ARC: Thousand Trails Campsite Idyllwild

SAN BERNADINO COUNTY

Rancho Cucamonga ARES/RACES: Fire Station (12158 Baseline)Rancho Cucamonga

Inland Empire ARC: A.B. Miller High School (near Walnut and Oleander)Fontana

Tri-County ARC: Home of WA6HNC (2481 Highland Road)Upland

6346. N.E.R.D.S. Field Day!!

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-26 00:00:00 UTC
From: radio@copland.udel.edu
Message-ID: <5othsbilg1@copland.udel.edu>
Source record: 194972

N.E.R.D.S. Return for Field Day!

On the weekend of June 28-29, radio amateurs across North America once again celebrate Field Day, far and away their most popular activity of the year. This is an emergency preparedness exercise, contest, picnic, campout, public relations and endurance event rolled into one.

The N.E.R.D.S. will be participating in Field Day from Iron Hill Park in Newark, Delaware. They are an officially organized and affiliated club devoted to contesting and fun. They will be using their new call sign, W3TT, for the first time on Field Day. In each of two previous outings, they captured both trophies awarded to the top Delaware entry, and placed in the topfive nationwide in their entry class.

Iron Hill is located off Route 896 and Interstate 94 near the Delaware-Maryland border. Exit I-95 at 896 South (the last exit before Maryland), go about a half mile to the first light, Old Baltimore Pike. Make a right at the light, go another half mile or so, passing the Iron Hill Museum on the right. Go right at Whitaker Road just past the museum, and up the hill. Turn into the park at the sign on the right and go to the end of the drive. The Field Day setup will be around the pavilion to the right.

The public is welcome and urged to join the fun, and see why "ham " radio can be so addictive.

For further information, please contact Bob Penneys, N9GG, at Ham Radio Outlet, Delaware, at (800) 644-4476, or e-mail directly to rgp@hamradio.com.

Thanks and see you at Field Day.!!

>Quit your bithching and call your cable company. More that likely there is
>a poor, or missing, ground connection on or near your equipment.

Another problem is that cable boxs (ie. the channes selection box) particularly those made by Jerrold are prone to RFI. The cable may be intact and all grounds in good shape and the box will get you every time. Nothing the viewer, or the ham can do about it. Bitch to the cable company and see if there is another brand of box available.
Good luck

6356. Re: math skills

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-26 00:00:00 UTC
From: rutherford.uleaspam.stinks@mcleodusa.net
Message-ID: <5ottv7$fha1@odie.mcleod.net>
Source record: 194982

Op>Hi,
Op>As a high school applied physics teacher and electronics instructor
Op>I am amazed at the lack of arithmetic skills in 10, 11, and 12th
Op>grade students. I've been at this for 8 school years now and the
Op>situation seems to have worsened. They cannot accomplish simple
Op>linear equations reliably. The "why" of this has eluded me, as the
Op>emphasis seems to have been on math and other "basics" since "new
Op>math" was effectively done away with (in California) about 10 years
Op>ago. I have to spend about 8 weeks at the beginning of every year
Op>teaching primary algebratic functions, linear equations etc. I
Op>frustrates me and creates the situation of me being unable to teach
Op>the subjects I'm hired to do. Answers? Examples?

Well, an example of why this can happen. I passed a high school algebra
class (with a c+) without learning a thing. Why? The teacher was also
the basketball coach, and was too busy talking to jocks all day, to answer
questions. He just gave us an assignment to do in class. Also, I have
seen teachers trying to teach classes outside their field of knowlege, and
people who had enough "paperwork" to teach, but didn't have a clue as to
how to really teach, teaching college level courses. Having the
"paperwork" to qualify isn't enough. Teachers also need to be able to
relate to students, and I feel that a teacher (whatever level,
kindergarten through university professor) should have to spend 2 to 5
years as a "teachers helper" or assistant, with at least 4 different
teachers. Also, a teacher should never be allowed to teach a subject
that they have not been trained to teach, regardless of "tenure" or other
academic bs.
Sorry to go off topic here, but you kind of struck a nerve!

>After all, Pactor II and Clover are used on HF, why not off the moon?

The timing parameters of those methods won't work on a path that long.
Besides, they are designed to work in a different sort of environment than
the EME circuit. A different technique is needed to deal with the EME
path. Karn et al have suggested a multitone non-coherent integrate and
dump approach to deal with the Rayleigh scattering and libration fading.

>>For example, under conditions where the Morse operator can maintain
>>20 WPM error free, Clover can do the equivalent of about 1000 WPM
>>error free. Any protocol overhead is easily absorbed by the higher effective
>>transmission rate even if you are only sending a few words.
>
>OK, how about a pile-up? If some day transceivers are routinely equipped
>with some digital en/decoder, like they have a morse keyer now, how
>will it work?

With a proper protocol, there won't be pileups. Contention will be arbitrated
and the stations will queue up in an orderly fashion to be serviced. Not much
sport in that, of course, but digital comms aren't about sport. They are about
optimizing utilization of the available channel resource.

You feel you're qualified to dictate the terms under which others may obtain an amateur radio LICENSE, yet you don't even know how to spell the word correctly?!?!

Whatever.

Hello All;
I'm selling the "MFJ-1270CQ: MFJ TNC-2 Packet Controller Turbo Plus"
with the 9600bps modem installed. This tnc/modem has all the features
of the "MFJ-1270C" plus builtin 9600bps G3RUH modem for 9600bps AX.25
and 9600bps AFSK operations.
The MFJ-1270CQ is fully TAPR TNC-2 compatible with KISS interface,
MFJ Host mode * Anti-collision technology * Enhanced personal Mailbox
Plus Much more.
Included are all original docs, manuals, box and accessories. This
unit is still under MFJ's Unlimited 100% Warranty. It has less than
4 hours use. It's Basicly New Out Of The Box!..Reason 4 Sale: I just
bought the new AEA/Timewave DSP-2232 that includes all PacSat modes,
Wefax, SSTV & more.. Also I am a non-smoker
New it sells for around $229.99 +shipping. Asking $195 +shipping.
All cash offers will be considered..
Please call 1-609-386-9382 10am to 10pm Eastern Time..
Or RE: via Email to: n2rif@amsat.org
Packet: N2RIF@WM2F.SNJ.NJ.USA.NA

6364. Galaxy 99v clarifier problem

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-26 00:00:00 UTC
From: Jim Burke <burkejd@ifc.hsd.utc.com>
Message-ID: <33B2F073.931@ifc.hsd.utc.com>
Source record: 194990
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I have a strange problem happening with this radio when it has been in my car all day long during a hot day.(In the 90's) When i turn the radio on (am), after about 10 minutes, the radio shifts down 2kc's & the course clarifier will only shift ~ 1.5 kc's when turning it from the low to the hi limits (should be +- 5kc's). The kicker is that this only happens on am & fm(all bands). Sideband is ok. (no shift & the clarifier works fine). When I get home & shut off the radio & come back out 1 hr. later, everything seems ok.

Has anyone experienced this or something similar, & if so do they know what causes this & a fix if possible.

Thanks in advance
Jim

you and the lowlifes on 75 and the fat out of shape hams at hamfests
are reasons that a bigdeal ham license does not impress me. look, i
just don't give a shit about your ham license, your ham radio hobby,
your fucking CB and truck stops or whatever your hangup in life is,
or your illustrious ancestor, who probably had more of a life than
needing to read things that made him sick.

you know, it's been a lot of fun discussing things of substance with you,
but amidst all the flak over the glorious ham hobby, all-American
surnames, etc etc. you never answered the question myself and several
others were wondering:

Why do you have to read posts that make you sick? (your terminology)

answer me that James.

actually, people on the group won't be very likely to consider a sale
offer from Mr Manduke, and i consider that a positive.
as for "sick of the thread", i confess i don't get that: all you have to
do is pass it by, isn't that right? or does just seeing the title
make you go postal? if the server is suffering from the
added kb load, the owner would bring up that issue, no?

Actually what is pathetic is you a) posting his e-mail to a public
newsgroup presumably without his permission, b) your responses to
him that label him a "your a no-code waste of sperm..", and c)
that you would drag your personal pissing contest into a newsgroup
that is focused solely on the sale of radio equipment.

Get a clue and grow up. If nothing else, try to be a model
of what an amateur radio operator should be instead of a model
of some bottom sucking low life that thinks their license
class gives them the right to treat others as scum. Also,
learn to use a spell checker and grammar checker as your
english skills are severely impaired. ;-)

73,
Todd

Thanks for reading.
I'm searching a mailing address in continental USA: I need to move from
my present address in Guam.
Can anyone provide me an address or tell me about a mail service in US
that can forward mail to Italy.

Thanks again,
Vito

You have used the word "hi" or "HI HI" in an inappropiate way.
HI HI is properly uses on CW (code) to indicate something funny. In text

you can say "ha ha" and of course on voice you would sound like an idiot

if you say "HI HI."

Your punishment is to say 5 lines of HI HI, text follows:

HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI

6374. Nazis at the ARRL??

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-26 00:00:00 UTC
From: Burt Fisher <burt1@rocketmail.com>
Message-ID: <33B31EBE.46B37745@rocketmail.com>
Source record: 195000

The iron hand of the ARRL does not tolerate dissent. I recived a letter from Bart Jahnke Manager ARRL/VEC that says in part, "...have determined

that we are no longer in need of of your volunteer services...Your ARRL VE accrediation is therefore withdrawn."

There is no mention that I ever did a thing wrong as a VE. Clearly the ARRL does not tolerate my opinions on the ham radio hobby.

The following applies to you based on the above:

[Written by Martin Niemoeller, the German Lutheran pastor arrested by the Gestapo and sent to Dachau concentration camp in 1938; the Allied forces freed him in 1945:]

In Germany, the Nazis first came for the Communists, and I didn't speak up because I wasn't a Communist. Then they came for the Jews, and I didn't speak up because I wasn't a Jew. Then they came for the trade unionists, and I didn't speak up because I wasn't a trade unionist. Then they came for the Catholics, but I didn't speak up because I was a Protestant. Then they came for me, and by that time there was no one left to speak up for me.

The ARRL leaders of course are not Nazis but if they had an Army would you trust them to be just? Would you be free under a government run by the ARRL?

In article <33A4FFC4.401D@ij.net>, downeast@ij.net says...
>
>Has anyone out there had any problems with their RS htx-212/242
>mobile radios. [deleted]
We also have found
>the HTX-242 radios are having a problem with the CTCSS and DTMF not
>having the right frequency and or low deviation.

I was wise enough to purchase the TSP plan on my first HTX-212.
The first one had a problem with the CTCSS decode ... with the
decode activated, the audio would occasionally open (burp) even
though the transmitting station was not transmitting the tone.
They tried to fix it twice, and said there was no problem. The
local store manager finally replaced it for me. The second 212
had the same problem.

After one unsuccessful attempt, the local store manager upgraded me
to an HTX 242. This time, the darn thing would NEVER open the
audio circuit, even if the tone WAS present! This unit was sent
back to the service center on May 20th, and the service center
quoted an estimated delivery date of August 18th! The local
manager was nice enough to simply give me a new 242 last Friday.
I've not yet had time to open it and wire it (I use the ARRL-
recommended DC connectors for all my equipment), but it would
not surprise me if this one has CTCSS detection problems too.

Source record: 195008

Doug:

If you are hearing CW on the TV cable, that means there is a leak in the cable somewhere. CAble systems do not understand RFi but they do understand leaks in their cable. If the cable is leaking, then their signal is getting out, degradings signal quality for their customers, and interfering signals are getting in. They wilol get busy and track down where the thingis leaking, then they will fix it, and all this should fix your RFI.

We had weak signal on the higher channels and I interference leaking in from local fire dispatch and some other source. The cable guy cruised around the neighborhood and found a leaking cable at my drop. Seems that the shield had become separated at the connector. REplaced the shield, cleaned everything up and my TV picture cleared up, RFI wnet away,and wveryone lived happily ever after.

SB QST ARL ARLB034
ARLB034 Ham radio serving as extra link during Mir crisis

For US ham-astronaut Mike Foale, KB5UAC, aboard the crippled Mir space station, ham radio is providing a valuable supplement to conventional Russian and NASA communication systems. Foale has already used the ham gear aboard Mir to talk to NASA managers and fellow astronauts and exchange health and welfare news as the crew struggles to stabilize the ship after Wednesday's collision with an unmanned cargo rocket. Routine ham radio operation and school contacts have been canceled during the current Mir crisis, however.

Astronaut friends of Foale's gathered late Wednesday morning--just hours after the mishap--at W5RRR at Johnson Space Center in Houston for the scheduled Mir pass and QSO. ''When we got there, it was a packed room. Ninety percent of the room was licensed astronauts,'' said Matt Bordelon, KC5BTL, the SAREX principal investigator.

As Bordelon related: ''A hush fell over the room as Mir started its trek above the horizon. We didn't know if they would be on--power was down to 50 available and all nonessential equipment was turned off. Before we even had a chance to call up, Mike called down for us.''

Following a collective sigh of relief, Bordelon said astronaut Dave Leestma, N5WQC, took the mike and started talking. ''Mike was in good spirits.'' Several others in the room also chatted with Foale during the 10-minute contact. An earlier report that the Mir's SAFEX ham radio equipment was in the damaged compartment was not correct.

Foale asked for some personal items to be sent up when the next Progress supply ship flies. And he had good news. Two of his major experiments are okay. They are in the Priroda module where he and the cosmonauts are living until repairs can be made to the damaged

Spektr compartment. At that time the Mir station should be able to resume normal ham radio contacts. ''Amateur Radio has a very low priority when survival is the key, and power is critical on Mir,'' SAREX Working Group Chairman Roy Neal, K6DUE, said in assessing the situation. A supply ship is being readied and could carry a replacement solar panel and other supplies to Mir within two or three weeks. NASA Shuttle-Mir Project Manager Frank Culbertson said repairs likely would require a space walk or two by the Mir crew.

''It was a very successful pass,'' Bordelon said of Wednesday's contact with Foale. ''All were very thankful for the ham radio and the excellent link it provided.'' Bordelon said he does not expect Foale to have the ham radio on at all times during the current crisis, ''but I think he'll do more passes with us,'' he added.

Bordelon said that astronaut Ken Bowersox was so impressed, ''he wants to get his license next week.'' As Neal put it: ''It's proving that ham radio, as always, is an invaluable aid to health and welfare during critical times.'' Neal said that as repairs progress, ''it's safe to say that disaster has been avoided. Repairs probably can and will be made, and ham radio will continue providing a personal link to help Mike Foale stay in touch with his home base.''

Ham-astronaut and former Mir crew member Jerry Linenger, KC5HBR, told reporters Wednesday that the Mir crew had to power down everything possible, including some life-support systems, in the wake of the collision. The crash initially resulted in a loss of as much as 50 of the Mir's electrical power. By Thursday, the Mir had 70 of its power back.

HAM RADIO SERVING AS EXTRA LINK DURING MIR CRISIS

For US ham-astronaut Mike Foale, KB5UAC, aboard the crippled Mir space station, ham radio is providing a valuable supplement to conventional Russian and NASA communication systems. Foale has already used the ham gear aboard Mir to talk to NASA managers and fellow astronauts and exchange health and welfare news as the crew struggles to stabilize the ship after Wednesday's collision with an unmanned cargo rocket. Routine ham radio operation and school contacts have been canceled during the current Mir crisis, however.

Astronaut friends of Foale's gathered late Wednesday morning--just hours after the mishap--at W5RRR at Johnson Space Center in Houston for the scheduled Mir pass and QSO. "When we got there, it was a packed room. Ninety percent of the room was licensed astronauts," said Matt Bordelon, KC5BTL,

the SAREX principal investigator.

As Bordelon related: "A hush fell over the room as Mir started its trek above the horizon. We didn't know if they would be on--power was down to 50% available and all nonessential equipment was turned off. Before we even had a chance to call up, Mike called down for us!"

Following a collective sigh of relief, Bordelon said astronaut Dave Leestma, N5WQC, took the mike and started talking. "Mike was in good spirits." Several others in the room also chatted with Foale during the 10-minute contact.

Foale asked for some personal items to be sent up when the next Progress supply ship flies. And he had good news. Two of his major experiments are okay. They are in the Priroda module where he and the cosmonauts are living until repairs can be made to the damaged Spektr compartment. At that time the Mir station should be able to resume normal ham radio contacts. "Amateur Radio has a very low priority when survival is the key, and power is critical on Mir," SAREX Working Group Chairman Roy Neal, K6DUE, said in assessing the situation. A supply ship is being readied and could carry a replacement solar panel and other supplies to Mir within two or three weeks. NASA Shuttle-Mir Project Manager Frank Culbertson said repairs likely would require a space walk or two by the Mir crew.

"It was a very successful pass," Bordelon said of Wednesday's contact with Foale. "All were very thankful for the ham radio and the excellent link it provided." Bordelon said he does not expect Foale to have the ham radio on at all times during the current crisis, "but I think he'll do more passes with us," he added.

Bordelon said that astronaut Ken Bowersox was so impressed, "he wants to get his license next week." As Neal put it: "It's proving that ham radio, as always, is an invaluable aid to health and welfare during critical times." Neal said that as repairs progress, "it's safe to say that disaster has been avoided. Repairs probably can and will be made, and ham radio will continue providing a personal link to help Mike Foale stay in touch with his home base."

Ham-astronaut and former Mir crew member Jerry Linenger, KC5HBR, told reporters Wednesday that the Mir crew had to power down everything possible, including some life-support systems, in the wake of the collision. The crash initially resulted in a loss of as much as 50% of the Mir's electrical power. By Thursday, the Mir had 70% of its power back. The cargo spacecraft sheared off half of a Spektr solar panel and damaged the module itself. When the crew sealed off the compartment, they had to cut cables from three other panels.

Speaking at a NASA press briefing, Linenger characterized the Mir as "a darkened ship" and said the crew would operate "in a slowdown mode" until the effects of the mishap could be corrected. The accident cut off Foale from his sleeping quarters and personal items in the Spektr module, which also contains most of the US experiments aboard Mir. Foale has been aboard

Mir since mid-May, when he replaced Linenger.

Linenger told the press conference Wednesday that it was "too early to comment" on what the latest problem aboard Mir might mean for the future of the 11-year-old space station, which already has outlasted its anticipated life span by six years. Linenger said fire and decompression are the two most dangerous things aboard a spacecraft "and we've had both of those." During Linenger's four months aboard Mir early this year, the crew experienced a fire, a near collision with another cargo rocket, and coolant system leaks.

For news updates, see http://www.hq.nasa.gov/office/pao/NewsRoom/today.html.

[Special thanks to Roy Neal, K6DUE, and Matt Bordelon, KC5BTL, for their assistance in compiling and editing this report--Ed]

VOLUNTEER PROTECTION ACT OF 1997 SIGNED BY PRESIDENT

Ham radio volunteers stand to benefit from "The Volunteer Protection Act of 1997," signed into law June 18 by President Clinton. The measure aims to provide Federal protection from "frivolous, arbitrary, or capricious" lawsuits filed against individuals affiliated with nonprofit organizations and government entities and acting in their volunteer capacities. This would include members of the Amateur Auxiliary and volunteer examiners, as well as other volunteers.

In general, the new law will exempt a volunteer of a nonprofit organization or governmental entity from liability for harm caused by an act or omission of the volunteer on behalf of such organization or entity if:

* the volunteer was acting within the scope of his or her responsibilities at the time.

* the volunteer was properly licensed or otherwise authorized for the activities or practice in the State in which the harm occurred.

* the harm was not caused by willful or criminal misconduct, gross negligence, reckless misconduct, or a conscious, flagrant indifference to the rights or safety of the individual harmed.

* the harm was not caused by the volunteer operating a motor vehicle, vessel, aircraft, or other vehicle for which the State requires the operator or owner to possess an operator's license or maintain insurance.

The law, known as Public Law 105-19, becomes effective September 16, 1997.

LEAGUE CALLS ON FCC TO KILL ANTI-THEFT SYSTEM PETITION

The ARRL says there's no justification for the FCC to consider increasing power limits or expanding the frequency range of Part 15 anti-theft systems that operate on HF. Commenting in response to a Petition for Rulemaking from Checkpoint Systems Inc--a manufacturer of the theft-deterrent devices--the League said the proposal was "technically baseless" and "fails to account for the extremely high interference potential" to licensed services. Under

FCC rules, Part 15 devices must comply with specified radiation and emission limits and protect licensed services from harmful interference.

Such anti-pilferage devices detect tags concealed within or attached to protected articles by using a continuous RF sweep over the frequency range of operation. Typically, systems are set up so that customers can only exit via a gate equipped with one of the devices. The systems now use frequencies in the 1.7 to 10-MHz range. Checkpoint wants the FCC to permit operation in the 1.705 to 30-MHz band at a maximum radiated emission level of 1000 (V per meter (measured at a distance of 30 meters) and a maximum conducted emission level of 3000 (V. Current rules permit a maximum radiated emission level of 30 (V per meter (measured at a distance of 30 meters) between 1.705 and 30 MHz, or 100 (V per meter between 1.705 and 10 MHz. The current conducted emission limit for such devices operating between 1.705 and 10 MHz is 250 (V.

Pointing out that the FCC already has addressed the issue in the past, the ARRL said Checkpoint's petition was based on "the simply bad policy of increasing RF emissions of Part 15 devices as a means of combating alleged increases in ambient noise levels." The League said the real reason behind the petition was to "increase the marketability of one manufacturer's outdated technology" in the face of newer 900-MHz technology that can handle wider separation between the exit gates, such as those that might be found in warehouses and distribution centers.

STS-94 LAUNCH SET FOR JULY 1

The space shuttle Columbia is on schedule to blast skyward on Tuesday, July 1 (at 1837 UTC according to the June 23 timeline). The 10-day mission, designated as STS-94, will carry the SAREX payload, and three hams are among the STS-94 crew members. They are Jim Halsell, KC5RNI, the mission commander; Janice Voss, KC5BTK; and Donald Thomas, KC5FVF. Seventeen schools--including one in the People's Republic of China--are on the schedule for SAREX contacts. The first contacts are scheduled for Thursday, July 3, with students at Edgewater High School, Orlando, Florida, and with students at Lexington Traditional Magnet School, Lexington, Kentucky.

The crew also may be available for random contacts, and the SAREX Working Group has designated the following frequencies during this mission. FM voice downlink (worldwide): 145.55 MHz; FM voice uplink (except Europe): 144.91, 144.93, 144.95, 144.97, and 144.99 MHz; FM voice uplink (Europe only): 144.70, 144.75, and 144.80 MHz; FM packet downlink: 145.55 MHz; FM packet uplink: 144.49 MHz. Hams should avoid transmitting on the shuttle's downlink frequencies. The uplink is your transmitting frequency. The crew will not favor any uplink frequency, so your ability to communicate with SAREX will be the "luck of the draw." Transmit only when the shuttle is within range of your station, and when the shuttle's station is on-the-air.

QSLs go to ARRL EAD, STS-94 QSL, 225 Main St, Newington, CT 06111-1494. Include the following information in your QSL or report: STS-94, date, time in UTC, frequency and mode (FM, voice or packet). You must also include a business-sized SASE. Additional STS-94 mission information is available from

NASA at the NASA Shuttle Web site, http://shuttle.nasa.gov.

STS-94 is a "refly" of the STS-83 mission in April that was curtailed when an onboard fuel cell malfunctioned. The same crew is flying STS-94, and most of the SAREX schools from that flight remain on the current schedule. Reflying Columbia in July dictated that downstream flights for the remainder of the year change slightly. Following STS-94, Discovery will fly in early to mid August on the STS-85 mission to deploy and retrieve a science satellite to study Earth's atmosphere. The flight also will demonstrate the use and operational capability of a robot arm that will be deployed outside the Japanese experiment module of the International Space Station. STS-94 will be the 23rd flight of Columbia and the 85th mission flown since the start of the shuttle program in April 1981.

The seventh shuttle-Mir docking mission on Atlantis is targeted for mid to late September. STS-86 will include the return of ham-astronaut Mike Foale, KB5UAC, from Mir and delivery of his replacement, astronaut Wendy Lawrence, KC5KII. The eighth and final mission scheduled in 1997 will be the STS-87 flight of Columbia slated for mid to late November. The 16-day mission includes the conduct of science experiments associated with the fourth flight of the US microgravity payload and the deployment and retrieval of a science satellite.

Although none of the remaining 1997 missions will carry the SAREX payload, the SAREX Working Group is seeking to schedule one or two SAREX missions for 1998.

For more information on STS-94, see http://shuttle.nasa.gov/.--thanks to the SAREX Working Group and NASA

FCC SEEKS COMMENTS ON PETITIONS FILED TO AMEND AMATEUR RULES

The FCC has invited comments supporting or opposing three Petitions for Rulemaking that affect the Amateur Service. Comments due within 30 days of publishing in The Federal Register:

* RM-9115, filed in March by the American Radio Relay League, requests that the FCC amend its rules to expand the ability of stations active in the Radio Amateur Civil Emergency Service (RACES) to communicate with non-RACES amateur stations and to relax the time restrictions on RACES emergency drills and tests.

* RM-9106, filed by the ARRL, requests amendment of rules governing the Amateur Service to authorize operation on 7100 to 7300 kHz in American Samoa.

* RM-9113, filed by Jerry J. Johnson, WA3WZF, Laurel, Maryland, asks the FCC to permit retransmission of emergency weather information by any ham station authorized to transmit FM above 144 MHz.

* RM-9114, filed by James Cardillo-Lee, KE6VGV, Petaluma, California, asks that the Commission change the Amateur Service rules to permit hams who are emergency personnel engaged in disaster relief efforts to use ham radio

frequencies while in paid-duty status.

FIELD DAY! SOMETHING FOR EVERYONE

Field Day. For some it's the competition, for others it's the camaraderie (and maybe the food), for still others it's a chance to test their skills (and that new antenna, radio, or camping gear) "in the field" under simulated emergency conditions. For most hams, Field Day is all of these and more--an annual ham radio happening that's become greater than the sum of its parts.

Now 64 years old, Field Day did not start out as the vaunted test of emergency preparedness it is considered today (nor was it on the fourth weekend in June). The first "International Field Day" on June 10 and 11, 1933, it was "just a test of portable equipment" for US and Canadian amateurs, says former ARRL Communications Manager George Hart, W1NJM, who's operated in 50 Field Day events over the years. Hart says then-Communications Manager Ed Handy, W1BDI, came up with the idea (Sweepstakes was also his brainstorm). "He had a real active mind," Hart said.

Under the early Field Day rules, only portable stations "actually in the field, away from the 'home' address" were eligible to submit Field Day scores. At that time, ARRL sections counted as multipliers in scoring, and portable-to-portable contacts counted double. (According to the old Federal Radio Commission rules, you had to notify the FRC that you were going to be operating away from your normal location, too.) Operating Field Day in the early years was further complicated by the fact that it was a lot harder to come up with a way to supply the necessary plate and filament voltages in the field than it is with today's mostly 12-V equipment.

It was not until the second annual Field Day, in 1934, that Handy's Field Day writeup in QST raised the aspect of emergency preparedness--something to keep in mind in 1997, the Year of Public Service. "Keep an operative portable at hand all the year, so it will be where you can put it to work promptly in the event of disaster or public emergency," Handy wrote more than six decades ago. Even with all of the ultra-portable equipment available today, his admonition stands, especially as we recall the service hams have provided in recent months in the aftermath of floods, tornadoes and other disasters. But in addition to being a preparation for public service, Field Day also is fun.

As ARRL Executive Vice President David Sumner, K1ZZ, said in "It Seems to Us. . ." in the May 1997 issue of QST, hams don't get involved in public service because of ARRL or ITU resolutions that say it's the right thing to do. "We do it because we enjoy it. We enjoy doing something useful with our skills and our equipment. We enjoy the camaraderie, the feeling of being a part of a winning team," Sumner wrote. That seems to sum up the spirit of Field Day pretty well, too. Whatever your goals this Field Day, we wish all an enjoyable and safe Field Day 1997! See May QST, page 109, for details on how you can join in.

QUEEN ELIZABETH MAKES HAM RADIO HISTORY

Queen Elizabeth II wrote a page in the annals of ham radio history Wednesday by becoming the first reigning British monarch to speak over ham radio. The Queen spoke briefly from Canada to England during a visit to Cabot Tower on historic Signal Hill in St. John's, Newfoundland, to commemorate the 500th anniversary of John Cabot's "Voyage of Discovery." The Society of Newfoundland Radio Amateurs (SONRA), which arranged the contact, operates a ham station in the building in tribute to Marconi's reception of the first transatlantic wireless signal in 1901 at a location some 300 feet from the tower.

The Queen spoke during a QSO between VO500JC, the Cabot Tower station, and GB500JC, in Bristol, England, the port from which Cabot began his voyage in 1497."It was very exciting this afternoon to watch and listen to the Queen participate in the QSO," said William J. Gillis, VE1WG, Atlantic Region Director of Radio Amateurs of Canada. SONRA President and RAC Asst Director Paul Piercey, VO1HE, and Dan Goodwin, VO1MX, were the operators for the occasion.

In a congratulatory message to Piercey, Gillis called the event "a great tribute to your hard work, dedication and diplomacy and to all the SONRA members who made it possible."

The occasion was recorded for posterity on both audio and video.

FORBES ARTICLE HIGHLIGHTS HAM RADIO "MAGIC"

Readers of the July 7, 1997, issue of Forbes magazine won't find any sleight of hand in the article "There's Magic in It," by James Clash, WA3JID. The two-page feature talks discusses what it is about ham radio that's kept the hobby alive when it "should have died with the advent of modern communications." ARRL Executive Vice President David Sumner, K1ZZ, is among those prominently mentioned in the story--along with other ham radio luminaries such as former US Sen Barry Goldwater, K7UGA; country music star Pat Loveless, KD4WUJ (who's shown spinning the dial of her transceiver); and US astronaut L. Blaine Hammond, KC5HBS.

As Clash's article explains, ham radio continues to thrive, and the number of hams worldwide has quadrupled over the past 30 years. The numbers have continued to increase an average of 6% annually since 1990 when the Internet started becoming a popular diversion. One point the article makes is that the Internet has become an ally of ham radio rather than an enemy.

The article apparently sparked the ham radio flame among readers, several of whom already have called the ARRL for more information about getting into (or back into) the hobby. Clash included the League's address and telephone number.

ARRL Public Relations Assistant Jennifer Gagne, N1TDY, assisted the author in gathering information and photographs for the article and served as his host during his visit to ARRL Headquarters. Hams will find it an informed and fun read that avoids the stereotypes and misconceptions about ham radio that sometimes appear in media portrayals of the hobby.

NEW JERSEY TVI LAWSUIT APPEALED

Neighbors who failed in an effort to sue a Lafayette Township, New Jersey, ham as a nuisance for interfering with their TV, telephone, and garage door opener have appealed the case to a higher court. In April, New Jersey Superior Court Judge Reginald Stanton said that federal law prevented him from declaring ham radio interference a nuisance in the case against Walter Kornienko, K2WK.

The plaintiffs--Kornienko's next-door neighbors, Leopold and Karen Korins--appealed the unfavorable decision to the Superior Court's Appellate Division. Bob Shelton, N2EDF--a retired New Jersey judge who's acting as an advisor to the case--said that in court remarks before rendering his decision, Stanton said that Kornienko was operating legally and properly and that were it not for the federal preemption issue, he would first require the Korinses to take measures to prevent the RF interference in their home before restricting Kornienko's hamming activities.

Shelton said members of the Sussex County Amateur Radio Association purchased filters to alleviate the RFI, but the Korinses would not let the club members install them. "We bent over backwards to help these people," said Shelton, a club member. Shelton also said that Karen Korins' negative remarks in court about Kornienko's antenna towers has led him to believe that the issue goes beyond RFI.

Kornienko, an avid contester, already has spent more than $10,000 on legal fees in the suit. He has permission from the township for his 48 and 90-foot towers. He also has some verticals on his property. The Kornienkos live on 3.5 acres on a hilltop in a rural section of Sussex County in New Jersey's northwestern corner.

The ARRL has agreed to seek to file a friend-of-the-court brief in the appeal. A defense fund has been established to help Kornienko pay his legal expenses.--thanks to The Hudson Loop and Bob Shelton, N2EDF

PHILIP F. WIGHT, W5UHK/VS6DR, SK

The man who once billed himself as "the biggest DXer in the Orient," Phil Wight, W5UHK/VS6DR, of Mountain View, California, and formerly of Hong Kong, died June 7. He was 57. DXer Fred Laun, K3ZO, who spent some time in Asia himself, explains that Wight's "approximately 500-lb bulk cut an imposing figure at radio club meetings in the area." Laun says that Wight, who became the chairman and CEO of Pacifica Products Ltd., had begun his working life "as a bass player with a band in a Las Vegas casino, and somehow found his way to Hong Kong while still a very young man." He also founded OHM (Oriental Ham Magazine) as a service to American and other English-speaking hams who were living in the orient.--Fred Laun, K3ZO, forwarded via the Internet DX Mailing List

DAN HENDERSON, VA3DH, SK

One of those responsible for organizing this year's AMSAT-NA annual meeting and symposium, Dan Henderson, VA3DH, of Burlington, Ontario, has died. A high school teacher and department head, Henderson had integrated ham radio

and satellites into his department's courses. As a part of the school operations, he ran a satellite station 24 hours a day under the call sign VE3TLK. His student operators had contact with other schools around the world, and his efforts resulted in many young hams. Henderson also conducted classes for adults in the evenings on behalf of his club.--Robin Haighton, VE3FRH, via SpaceNews

---

IN BRIEF:

* This weekend on the radio: Ready or not, it's Field Day! See May QST, page 109, for the rundown. The RAC Canada Day Contest (CW and SSB) is July 1. See July QST, page 97, for details.

* HQ job opportunity: If you have proven technical ability, a broad ham radio background, and strong writing and editing experience, you are invited to apply for the position of Senior Assistant Technical Editor at ARRL Headquarters in Newington, Connecticut. Excellent PC word processing and database experience and superior communication skills are also required. Extra class license and BSEE or other similar technical degree preferred. As a full-time member of the ARRL publications staff, you will write and edit material for ARRL technical publications and work closely with authors and in-house staff as material is prepared for publication. Starting salary is in the high 30s. Send a cover letter, resume and salary expectations to R. Boucher, ARRL, 225 Main St, Newington, CT 06111-1494. No phone calls, please. The ARRL is an equal opportunity employer.

* New, re-elected section managers: Michigan gets a new section manager on July 1. Dick Mondro, WA4FQT, of Dearborn Heights will take over from Dale Williams, WA8EFK, who has resigned. These newly elected section managers assume their duties October 1: Georgia, Nelson "Sandy" Donahue, W4RU, Atlanta; and South Texas, Ray Taylor, N5NAV, New Braunfels. Recently re-elected as section managers were: Colorado, Timothy Armagost, WB0TUB, Littleton; Eastern Washington, Kyle Pugh, KA7CSP, Spokane; Western Washington, Harry Lewis, W7JWJ, Seattle; Los Angeles, Phineas Icenbice Jr, W6BF, Northridge; West Virginia, Olie Rinehart, WD8V, South Charleston; Sacramento Valley, Jettie Hill, W6RFF, Roseville.

* JOTA needs you! Just before last year's Jamboree On the Air (JOTA)--held each October--the ARRL Educational Activities Department published its first ARRL Scout Handbook about Scouting and Amateur Radio (with an emphasis on JOTA). Last year's book was made possible by a grant from The ARRL Foundation, but we need your help this time around so that we can reprint this popular booklet in time for JOTA '97 in October. Thanks to dozens of generous hams, we're almost over the top. We still could use a little more help from our friends, however. Consider a donation to the ARRL Scout Handbook Fund today. Donations go to ARRL, Scout Handbook Fund, 225 Main St, Newington, CT, 06111. More information on Scouting and Amateur Radio, plus an on-line copy of the ARRL Scout Handbook, is at http://www.arrl.org/ead/#scout.--Glenn Swanson, KB1GW

* Wisconsin hams on alert: An electrical power crunch brought on by hot weather and a number of generating stations off-line for maintenance has led Madison Gas & Electric Company to call for power conservation measures to prevent rolling blackouts in parts of the state. The alert also affects Amateur Radio Emergency Service (ARES) operators in the greater Madison area who will be ready to provide emergency or backup communication and other support in the event of power system shutdowns.--Jim Romelfanger, K9ZZ

* Leap second alert: A "leap second" will be added between 23:59:59 UTC June 30, 1997, and 00:00:00 UTC July 1, 1997. The "leap second" (defined in this case as 23:59:60 UTC) is added from time to time to compensate for the slowing of Earth's revolution.

* Phase 3D launch campaign begun: The cryogenic core stage of the Ariane 502 vehicle that will carry Phase 3D aloft was erected in Kourou, French Guiana, on June 17, one day after the official start of the Ariane 502 "launch campaign" by the French space agency. It was mated with the upper stage and vehicle equipment bay on June 18 and 19. Solid boosters were to be strapped on the vehicle on June 21 and 23. The new Vulcain engine will arrive in Guiana on July 9 and will be mounted on the vehicle late the same month. A launch rehearsal is planned on September 4 with a targeted launch date on September 30.--Orbital Report On-Line

* June QST Cover Plaque Award winner: Bob Zimmerman, NP4B, won the June QST Cover Plaque Award for his article, "Broadbanding the Arecibo Dish" on page 28. Congratulations, Bob!

* Connecticut Amateur Radio Awareness Week: In recognition of the ARRL's presence in Connecticut as well as Field Day and the Nutmeg State's 8700 hams, Connecticut Gov John Rowland has proclaimed June 22 through June 29 as "Amateur Radio Awareness Week." In addition, the Newington Town Council recently approved a similar proclamation. Connecticut Public Information Coordinator Al Cohen, W1FXQ, was the driving force behind the state and local proclamations.

* Hams asked to track cyclist: Hams north of the border are being asked to help track cyclist Dr Andries Botha, of Grimshaw Alberta, who began a cross-Canada bicycle trek last weekend. Dr Botha left Vancouver on June 21, 1997. He is planning to travel the 7000 km (approximately 4340 miles) in 20 days--an average of 350 km (217 miles) per day. Roy Nystrom, VE6ATN, has asked the Amateur Radio community to help track Botha on his epic journey. Those spotting Botha should message Nystrom via ham radio (7.055 MHz) or via e-mail, rnystrom@telusplanet.net. A precise itinerary not known. Dr Botha will be wearing a black jacket that reads "Coast to Coast in 20 Days."--RAC

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs.

* The HIRAM BBS: 860-594-0306.

* The ARRL Technical Information Server (Info Server): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

Could you supply some of the details on the protocol? I am especially interested to see how this system would queue in weak-signal operation for those hams who choose to use them. I have seen it offered by many of those proposing such systems that they do not intend to displace weak-signal operation (usually calling the fear that they do one of the "Morse Myths." I am just curious on how one of those proposing such a system has accomodated the modes that he doesn't intend to displace.

Thanks in advance for the info.

After what happened to Luck Hurder, this doesn't surprise me. I think that I would confront this Mr. Jahnke and ask for specific reasons.

If you are experiencing interference to channel 18 from 2-meter amateur operation, there is clearly a leak somewhere. This could be in the cable system, or it could be in your cable ready TV. All cable channels make use of over-the-air frequencies, so if the cable system and cable-ready equipment are not very well shielded, there will be interference from nearby authorized transmitters.

If this is interference to all or most channels from HF operation, a common-mode choke, about 10 turns of the cable wrapped onto a FT-240-43 ferrite core, installed right at the TV where the cable connects, will probably do it. If, due to poor shields in the cable, etc., the HF signal is leaking in, a high-pass filter may help.

The ARRL wrote a 3-part article on cable TV interference, published in Communications Technology (the journal of the Society of Cable Television Engineers). We can supply photocopies of the article to ARRL members for $2.00 to cover printing and postage. If you are a member, email bdicosimo@arrl.org and ask that she send the RFI-Cable TV package. She will enclose a bill for the $2.00. (For non-members, the cost is $4, and we do require prepayment from non-ARRL members.)

Dear Mr. Mega-hypocrite,

If only your Internet-provider had half as much commonsense as the ARRL,
this could be a decent news-group.

Moritz

6394. "Ham radio serving..."

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-27 00:00:00 UTC
From: Glenn Swanson <gswanson@arrl.org>
Message-ID: <33B3E0C5.49A4@arrl.org>
Source record: 194894

From: The ARRL Letter Vol. 16, No. 26 June 27, 1997:
(It's also in W1AW/ARRL Bulletin 34 ARLB034)

HAM RADIO SERVING AS EXTRA LINK DURING MIR CRISIS

For US ham-astronaut Mike Foale, KB5UAC, aboard the crippled Mir space station, ham radio is providing a valuable supplement to conventional Russian and NASA communication systems. Foale has already used the ham gear aboard Mir to talk to NASA managers and fellow astronauts and exchange health and welfare news as the crew struggles to stabilize the ship after Wednesday's collision with an unmanned cargo rocket. Routine ham radio operation and school contacts have been canceled during the current Mir crisis, however.

Astronaut friends of Foale's gathered late Wednesday morning--just hours after the mishap--at W5RRR at Johnson Space Center in Houston for the scheduled Mir pass and QSO. "When we got there, it was a packed room. Ninety percent of the room was licensed astronauts," said Matt Bordelon, KC5BTL, the SAREX principal investigator.

As Bordelon related: "A hush fell over the room as Mir started its trek above the horizon. We didn't know if they would be on--power was down to 50% available and all nonessential equipment was turned off. Before we
even had a chance to call up, Mike called down for us!"

Following a collective sigh of relief, Bordelon said astronaut Dave Leestma, N5WQC, took the mike and started talking. "Mike was in good spirits." Several others in the room also chatted with Foale during the 10-minute contact.

Foale asked for some personal items to be sent up when the next Progress supply ship flies. And he had good news. Two of his major experiments are
okay. They are in the Priroda module where he and the cosmonauts are living until repairs can be made to the damaged Spektr compartment. At that time the Mir station should be able to resume normal ham radio contacts. "Amateur Radio has a very low priority when survival is the key, and power is critical on Mir," SAREX Working Group Chairman Roy Neal, K6DUE, said in assessing the situation. A supply ship is being readied and could carry a replacement solar panel and other supplies to Mir within two or three weeks. NASA Shuttle-Mir Project Manager Frank Culbertson said repairs likely would require a space walk or two by the Mir crew.

"It was a very successful pass," Bordelon said of Wednesday's contact with Foale. "All were very thankful for the ham radio and the excellent link it provided." Bordelon said he does not expect Foale to have the ham radio on at all times during the current crisis, "but I think he'll do more passes with us," he added.

Bordelon said that astronaut Ken Bowersox was so impressed, "he wants to get his license next week." As Neal put it: "It's proving that ham radio, as always, is an invaluable aid to health and welfare during critical times." Neal said that as repairs progress, "it's safe to say that disaster has been avoided. Repairs probably can and will be made, and ham radio will continue providing a personal link to help Mike Foale stay in touch with his home base."

Ham-astronaut and former Mir crew member Jerry Linenger, KC5HBR, told reporters Wednesday that the Mir crew had to power down everything possible, including some life-support systems, in the wake of the collision. The crash initially resulted in a loss of as much as 50% of the Mir's electrical power. By Thursday, the Mir had 70% of its power back. The cargo spacecraft sheared off half of a Spektr solar panel and damaged the module itself. When the crew sealed off the compartment, they had to cut cables from three other panels.

Speaking at a NASA press briefing, Linenger characterized the Mir as "a darkened ship" and said the crew would operate "in a slowdown mode" until the effects of the mishap could be corrected. The accident cut off Foale from his sleeping quarters and personal items in the Spektr module, which also contains most of the US experiments aboard Mir. Foale has been aboard Mir since mid-May, when he replaced Linenger.

Linenger told the press conference Wednesday that it was "too early to comment" on what the latest problem aboard Mir might mean for the future of the 11-year-old space station, which already has outlasted its anticipated life span by six years. Linenger said fire and decompression are the two most dangerous things aboard a spacecraft "and we've had both of those." During Linenger's four months aboard Mir early this year, the crew experienced a fire, a near collision with another cargo rocket, and coolant system leaks.

For news updates, see:

Propagation Forecast Bulletin 26 ARLP026
From Tad Cook, K7VVV
Seattle, WA June 27, 1997
To all radio amateurs

SB PROP ARL ARLP026
ARLP026 Propagation de K7VVV

Conditions are still very quiet. Solar flux hovers around 70, and no change is forecast for the next few weeks. Last week's average sunspot numbers were down about 12 points from the previous week, average solar flux was down about a point, and the average A index of geomagnetic activity was up a little over two points. While solar activity may seem depressing, at least the geomagnetic activity is stable, indicated by low K and A indices. Probably the best day this past week in terms of low geomagnetic activity was June 21, when the K index was zero for most of the day.

A few years ago, Scott Craig, WA4TTK, wrote a PC freeware program for plotting solar activity. This software has been offered in the past to readers of this bulletin. Scott now has version 3.01 available. It is a 32-bit program for Win95, with new updates for MS DOS and Windows 3.1 as well.

The really interesting and useful new feature in v3.01 is the ability to automatically update the solar flux and sunspot number database when it scans new propagation bulletins. It pulls the solar data from the bottom of this bulletin and updates the database automatically. Get it from Scott's homepage on the web at: http://edge.net/~scraig/.

For any old bulletins to fill gaps in data, check on the ARRL website at: www.arrl.org/w1aw/prop/1997-index.html.

Sunspot Numbers for June 19 through 25 were 16, 23, 11, 15, 14, 14 and 34 with a mean of 18.1. 10.7 cm flux was 70.1, 70.2, 67.6, 69.5, 69, 69.9 and 71.7, with a mean of 69.7, and estimated planetary A indices were 10, 5, 3, 9, 7, 6, and 8, with a mean of 6.9.

Conditions shouldn't be bad for Field Day this weekend. Don't forget sporadic E skip on 10 meters. Here are several domestic path projections useful for this operating event.

From the East Coast to the West Coast, check 80 meters from 0230 to 1030z, peaking around 0530 to 0930z. 40 meters should be good from 0030 to 1300z, and peak from 0400 to 1030z. Check 20 meters from 1500 to 0500z, peaking after 0200z.

From the East Cost to the Central U.S. check 80 meters from 2230 to 1300z, with excellent signals around 0930z. 40 meters looks good around the clock, peaking from 0200 to 1100z. 20 meters looks best over this short path around 2100 to 2200z and perhaps 0230 to 0330z.

From the West Coast to the Central U.S. 80 meters looks good from 0215 to 1230z, peaking from 0500 to 1030z. 40 meters is open all the time, but best conditions are from 0330 to 1100z. 20 meters is best around 2200 to 0830z and 1200 to 1630z. There may be some 15 meter openings from 1600 to 0600z, but this may prove difficult.

From the Pacific Northwest to the Southeastern states, 80 meters looks good from 0300 to 1100z, and 40 meters from 0030 to 1330z. 20 meters looks marginal, but may open from 1630 to 0600z.

6399. FORSALE - Immaculate Kenwood TS-520, great starter rig

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-27 00:00:00 UTC
From: jpl@qc10.ho.lucent.com
Message-ID: <5p122n$jgj@nntpa.cb.lucent.com>
Source record: 194899
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc,nj.forsale

I have a virtually immaculate Kenwoods TS-520 rig that I would like to sell.
This was my first "real radio and in my opintion is still
one of the best rigs around. It would make a fantastic beginner
station or a great backup rig.

I am only the second owner of the rig.
I purchased it from a collegue of mine at Bell Labs (who
was the original owner), and I have the orignal sales receipt,
boxes, and manual for it. Both he and I took
exceptionally good care of this rig. It has NEVER been in a smoking
environment and has NEVER been mobiled.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC.
It covers 80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option).

The price is $300 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

Burt is correct about two things:
1. His personality is a grotesque, mis-shappen thing.
2. That which is responsible for it, is quilty of shameful things.

Burt is incorrect about most everything else:
1. Ham radio is not responsible for his actions, he is.
2. Ham radio is not responsible for his sin, he is.
3. Ham radio is not sociopathic, he is.

The problem is Burt, not amateur radio.
Unfortunately, Burt is too insane to understand this,
so we alone must act responsibly.
Let the Burt fellow traveling sociopaths proclaim themselves,
for all to see.

Bye now,

73, Don

Actually, cause for withdrawal of credentials is usually accomplished by
failure to participate in VE sessions of a specified period of time.
Dollars to doughnuts Burt hasn't participated in any sessions. Quite
frankly, I really doubt that Burt was ever a VE to begin with. I mean,
if he were, we would have read of his exploits as such. After all, based
on past postings, Burt is the original "I" man.

I really doubt that Burt's supposed negative comments to and about the
ARRL are even given any credible "looksee" by most and are, in actuality,
viewed as some sort of circus geek entertainment coming from an
overdeveloped little piece of land located in the Gulf Stream current.

Source record: 194904

MTB302@speedlink.com (fott oss) wrote:

- I just received the latest issue of QST, and on the last page
-there is an ad for the FT-8100. In the specifications it says
-"Cellular and 900 MHz Cordless Phone frequencies blocked". 900 MHz
-cordless phones operate from 902-928 MHz, the same spectrum as the
-33-cm ham band. WHY is the government mandating blocking reception of
-a HAM BAND?!?!?

Well, fot oss, not every country in the world that uses the 900 MHz
phones allocate the 902-928 MHz segment as a ham band. Why should
Yaesu build a separate version of their rig just so you can listen
to cordless phones? If you are that upset about it go buy a
transverter and listen to them. Or use that "vast knowledge" that
you used to get your General ticket and build your own. BTW: I'm
still waiting for that callsign.

-I am sick and tired of the government trying to
-dictate to us what we can and can not LISTEN to! Listening is not a
-harmful activity, so enough already! As far as I knew, the only band
-on US receivers that is supposed to be blocked is the 824-849 MHz and
-869-894 MHz CELLULAR band (and even that is stupid!). If anyone knows
-if and when the 900 MHz band was declared illegal to listen to, please
-let me know.

Would you want someone to listen to your private phone conversation?
Most people don't. Also, most people who use cellular phones don't
like others listening in to their conversations so they petitioned
Congress to pass laws to help insure that their conversations are
private. Just because a few like you get off to listening to
cellular phone and cordless phone conversations doesn't mean that
government is intruding on your rights to pass laws to prevent it.
What you might find is that if you can prove that you have a ham
license manufacturers will give information on modifications you
can make to the rig. Have you asked Yaesu if there is a modification
to the FT-8100? Probably not since you are just whining and crying
about it. This is true with most linear amplifiers.
It is illegal to sell a linear amp in the US that will transmit
on 12 or 10 meters. If you can prove you are a ham the manufacturer
will gladly tell you how to make it work on 12 and 10.
You claim to be a ham, let's have that callsign....

This is what a ham looks like on his way out. Note the transparent thin smile,the grey hair,the gaunt,cancerous visage of burp the flamethrower. Always talking about face to face. Ha! He looks terminal! And the ARRL in one of their brightest moves has just revoked his VE certificate. A teacher of electronics with revoked paperwork. New hams take a good look at Burp. He's definately on the decline. It won't be long before you see him in Boston with a sign "Will flame for food".

And yes, I'm big. And I'm STILL a VE! Who won? Ha!

I have the following Yaesu FT-50 RD hand held dual band package for sale :

FT 50-RD HT (includes the enhanced FT-112 PL/DPL Keypad) with FNB 41 battery, paid $339.95 new, COMET SMA 3 antenna, paid $34.95 new, FNB-41 battery paid $58.95 new, FNB 40 battery paid $48.95 new, MH 34 lapel speaker Mike, $30.95 new. These items were purchased on 5/10/97.

ADMS - 1C software and cable, $36.95 new, CA-14 NC-50 charger adaptor set, $24.95, NC-50 dual sequential rapid charger, $99.95 new. These items were purhcased on 5/15/97.

CSC-68 soft case for FT-50 RD, $15.99, E-DC-5B cig. lighter adaptor plug, $24.95.

All items are MINT, and as if brand new. Receipts will be provided for all above. My total cost of package - $716.00

Will sell for $500.00 shipped to 48, COD $5.00 extra.

Will not break up package, NO TRADES.

You know that you can't program the radio via the side connector, right?
The programming software is contained in an EPROM that plugs into your
R1800 suitecase programmer. You must screw the EEPROM codeplug from your
MX300-S onto the MX300-S programming head on the R1800. If your radio
doesn't have the S (MX300) on the top, you will need to order channel
elements to put it on frequency.

If this cracked jerk had any radio experience whatsoever he'd be able to
solve this one himself. Since this guys an anon he probaly made it up.
Somebody rush this jerk about two gallons of breast milk and he might
make it..

6413. 10m Mobile Antenna - WTB or Build

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-27 00:00:00 UTC
From: Dave <gekko95@ix.netcom.com>
Message-ID: <33B44EA7.6619@ix.netcom.com>

I want to put my HTX-100 on the air mobile:

Does anyone have for sale a 10 meter mobile antenna with (preferably) trunk mount? I'm looking for a loaded whip or helical along the lines of what Rat Shak used to sell when they were selling the HTX-100. Cheap helps :)

Or have winding data to build one, or modify a CB antenna, etc?

Thanks for the help. Look for you on 10!

There's a morse code program called "morse" that runs on several flavors
of Unix. The Sun version has an annoying "click." I have a fixed version
but don't know who maintains, archives or otherwise cares about it.
Anyway, here's "beepSun.c" Enjoy..

73..Jim N2VNO

----------------start of beepSun.c----------------------

```
/*
* If the audio library or audio include files are missing, you need
* to get /usr/demo/SOUND off the Sun OS tapes or CD.
*
* This routine will turn your audio device up to full volume, but
* will not attempt to reset the current speaker / jack choice.
*
* The sun speaker has a residual "click" each time it switches from
* silence to tone that I am unable to rid it of.
*/

/* N2VNO 6-97 Fixed "click", caused by:
- using 0 to generate "silence", should be 255.
- Previously generated tone was shortened when playing shorter
tone, causing ramp-down to be chopped off.
- Discontinuous values between steady part of tone and ramp-down.
*/

/* beepSun.c -- seligman 6/92 */

/*
-- Implementation of beep.h for Sun.
-- Rick to Joe to Scott to Joe.

As far as I know the ARRL is not dishonest per se. They are extemely
politicaland certainly quite political among hams. They use power
against their
enemies effectively. Sounds like a great dictatorship?

> Of course not. But certainly if you published that the FCC was

There's absolutely no difference between the ARRL or ANY organization. Feel free to speak your mind, say what you want, but don't cry and complain when you get the boot. It's a fact of life. Draw enough negative attention to yourself, expect to get negative results. It makes no difference if it's the ARRL or some large corporation like IBM or Lucent Technologies. If you want to speak your mind, be sure you're not stepping on too many toes.

It's not a matter of free speech or any such nonsense like that. Burt can say anything he likes and does. I fail to see what the surprise is that he got his (and I still say he never had) VE credentials pulled.

Quite frankly, as stated before, Burt has the credibility of dune grass and to believe at face value he states is ludicrious.

And to equate the ARRL to Nazis'??? This coming from a man who uses the same propoganda techniques as Joesph "Noballs" Geobells, is without a doubt one of the high points in lows
as far as Burt is concerned.

I'm sure I'll be called gutless and all the other pimply hyperbolyes Burt has to throw out. But Burt would never EVER say it to my face let alone anyone else's. He's too busy being the "I" man.

Poor Burp just lost his ve liscense. You keep good company. I don't see a picture of your skinny knock-kneed ass on the web. Why not? I'm 6'2" and weigh 250.I guess if I was a little pocket protector wearing geek stuck on an island and weighed 90 pounds I would meet your little stilted approval. Now you ride Burp's coattail's right into the gutter boy.

It's a parrot dumbass.And I do have a neck:It's 17" in diameter. It's just 2 " high. If all you have to whine about is my physical superiority to you and punctuation you need to work harder. Why don't you fly out to Boston and console Burp. The league just pulled his ve certification. he needs a little bony shoulder to cry on.

6437. HAM RADIO SERVING AS EXTRA LINK DURING MIR CRISIS

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-27 00:00:00 UTC
From: hansbrakob@juno.COM
Message-ID: <19970626.215923.3166.0.HansBrakob@juno.com>
Source record: 195017

Following from the "ARRL Letter" Vol 16, #26

HAM RADIO SERVING AS EXTRA LINK DURING MIR CRISIS

For US ham-astronaut Mike Foale, KB5UAC, aboard the crippled Mir space station, ham radio is providing a valuable supplement to conventional Russian and NASA communication systems. Foale has already used the ham gear
aboard Mir to talk to NASA managers and fellow astronauts and exchange health and welfare news as the crew struggles to stabilize the ship after

Wednesday's collision with an unmanned cargo rocket. Routine ham radio operation and school contacts have been canceled during the current Mir crisis, however.

Astronaut friends of Foale's gathered late Wednesday morning--just hours after the mishap--at W5RRR at Johnson Space Center in Houston for the scheduled Mir pass and QSO. "When we got there, it was a packed room. Ninety
percent of the room was licensed astronauts," said Matt Bordelon, KC5BTL,

the SAREX principal investigator.

As Bordelon related: "A hush fell over the room as Mir started its trek above the horizon. We didn't know if they would be on--power was down to 50%
available and all nonessential equipment was turned off. Before we even had
a chance to call up, Mike called down for us!"

Following a collective sigh of relief, Bordelon said astronaut Dave Leestma,
N5WQC, took the mike and started talking. "Mike was in good spirits." Several others in the room also chatted with Foale during the 10-minute contact.

Foale asked for some personal items to be sent up when the next Progress supply ship flies. And he had good news. Two of his major experiments are

okay. They are in the Priroda module where he and the cosmonauts are living
until repairs can be made to the damaged Spektr compartment. At that time

the Mir station should be able to resume normal ham radio contacts. "Amateur
Radio has a very low priority when survival is the key, and power is critical on Mir," SAREX Working Group Chairman Roy Neal, K6DUE, said in

assessing the situation. A supply ship is being readied and could carry a replacement solar panel and other supplies to Mir within two or three weeks.
NASA Shuttle-Mir Project Manager Frank Culbertson said repairs likely would require a space walk or two by the Mir crew.

"It was a very successful pass," Bordelon said of Wednesday's contact with Foale. "All were very thankful for the ham radio and the excellent link it provided." Bordelon said he does not expect Foale to have the ham radio on at all times during the current crisis, "but I think he'll do more passes with us," he added.

Bordelon said that astronaut Ken Bowersox was so impressed, "he wants to get his license next week." As Neal put it: "It's proving that ham radio, as always, is an invaluable aid to health and welfare during critical times."
Neal said that as repairs progress, "it's safe to say that disaster has been avoided. Repairs probably can and will be made, and ham radio will continue providing a personal link to help Mike Foale stay in touch with his home base."

Ham-astronaut and former Mir crew member Jerry Linenger, KC5HBR, told reporters Wednesday that the Mir crew had to power down everything possible, including some life-support systems, in the wake of the collision. The crash initially resulted in a loss of as much as 50% of the Mir's electrical power. By Thursday, the Mir had 70% of its power back. The cargo spacecraft sheared off half of a Spektr solar panel and damaged the module itself. When the crew sealed off the compartment, they had to cut cables from three other panels.

Speaking at a NASA press briefing, Linenger characterized the Mir as "a darkened ship" and said the crew would operate "in a slowdown mode" until the effects of the mishap could be corrected. The accident cut off Foale from his sleeping quarters and personal items in the Spektr module, which also contains most of the US experiments aboard Mir. Foale has been aboard Mir since mid-May, when he replaced Linenger.

Linenger told the press conference Wednesday that it was "too early to comment" on what the latest problem aboard Mir might mean for the future of the 11-year-old space station, which already has outlasted its anticipated life span by six years. Linenger said fire and decompression are the two most dangerous things aboard a spacecraft "and we've had both of those." During Linenger's four months aboard Mir early this year, the crew experienced a fire, a near collision with another cargo rocket, and coolant system leaks.

Following from ARRL Letter, Vol 16, #26

FCC SEEKS COMMENTS ON PETITIONS FILED TO AMEND AMATEUR RULES

The FCC has invited comments supporting or opposing three Petitions for Rulemaking that affect the Amateur Service. Comments due within 30 days of
publishing in The Federal Register:

* RM-9115, filed in March by the American Radio Relay League, requests that
the FCC amend its rules to expand the ability of stations active in the Radio Amateur Civil Emergency Service (RACES) to communicate with non-RACES
amateur stations and to relax the time restrictions on RACES emergency drills and tests.

* RM-9106, filed by the ARRL, requests amendment of rules governing the Amateur Service to authorize operation on 7100 to 7300 kHz in American Samoa.

* RM-9113, filed by Jerry J. Johnson, WA3WZF, Laurel, Maryland, asks the FCC
to permit retransmission of emergency weather information by any ham station
authorized to transmit FM above 144 MHz.

* RM-9114, filed by James Cardillo-Lee, KE6VGV, Petaluma, California, asks
that the Commission change the Amateur Service rules to permit hams who are
emergency personnel engaged in disaster relief efforts to use ham radio frequencies while in paid-duty status.

So let me get this straight, if I have negative opinions of the FCC I
should lose my license?
What does being a VE have to do with my opinions of the way hams act on
the air?

Okay, Burt, let me help your conveniently faltering memory:

} From: Burt Fisher <burtfisher@geocities.com>
} Newsgroups: rec.radio.amateur.misc
} Subject: Almost too late for 2 meters
} Date: Sat, 01 Mar 1997 07:49:39 -0500
} Message-ID: <331825E3.1757@geocities.com>

} The League's objective is to falsely demonstrate there is
} broad citizen opposition to the industry proposals.

I don't know that this is the reason that the League decided your
help was not needed, but that would have been enough for me.

> [Written by Martin Niemoeller, the German Lutheran pastor arrested
> by the Gestapo and sent to Dachau concentration camp in 1938; the
> Allied forces freed him in 1945:]

No, Burt, you are not a martyr like Niemoeller, you are the buffoon
who fills amateur radio newsgroups with your irrelevant and pathetic
mental motions. But more relevantly, you are also on record as
posting in public your claim that the ARRL is dishonest.

No one has trespassed on your free speech, but why would the ARRL use
your help when you have libeled them in this way? I support the
League in this action.

6450. HELP ANTENNA PROBLEM

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-27 00:00:00 UTC
From: franky B <frankyb@glo.be>
Message-ID: <33B41B12.51A3@glo.be>
Source record: 195030

could anyone help me with my antenna problem pse....

My 3elm 3 bander gives a lot of problem on 20M, on 10 and 15 he's ok.
on 20M the SWR is 0 or even below, and the power output is 70W instead of
the 130 i get from my ts-930. Also a lot of TVI problems.
Is it a problem with one of the coils....?

Any help is much appreciated....ON4CEL, Franky

I did not libel the ARRL. My postings were clearly not serious.
If I posted the FCC decided to cancel all ham licenses because
hams say a dumb thing like "HI HI" should the FCC pull my
license?

There should be criteria for pulling VE approval, I bet there is and
I bet that I did not fit that criteria thus the decision is abitrary.
What will they pull VE status for next and to who?

Oh, I get it. The ARRL is dishonest, ho ho ha ha. Maybe it's the
way you tell it, but your joke was lost on me and perhaps on others.

> If I posted the FCC decided to cancel all ham licenses because
> hams say a dumb thing like "HI HI" should the FCC pull my
> license?

Of course not. But certainly if you published that the FCC was
corrupt it be entitled to decline your offer of employment or of
volunteer assistance.

> There should be criteria for pulling VE approval, I bet there is and
> I bet that I did not fit that criteria thus the decision is abitrary.

How about bringing the League into disrepute?

You're a loose canon, Burt, and I believe that the League is well
advised to distance itself from you as far as possible.

Hello all,

I'll be calling CQ on 50.400 AM all this weekend.

Was a bummer I missed out on lastnight's good opening.
Need to check the radio before I go to bed.

Sat I'll be on from 10:00 pdt - 22:00 pdt
Sun from 10:00 pdt - 18:00 pdt (later if there's openings)

Hope to hear from you...

P.S. If you have not checked out my 50AM web page, please do so......

Source record: 194793

QST de W1AW/MM
ARRL Bulletin 35-A ARLB035-1969
From ARRL Headquarters
Newington CT June 31, 1997
To some radio amateurs

The iron hand of the ARRL does not tolerate dissent. We have decided to address the
recent accusation on the ham radio newsgroups that compare certain acts of the ARRL to
a party that controlled Germany in the 30's to mid 1940s. The ARRL has authorized
Bartland Jahnke, Manager ARRL/VEC,
to issue the following letter to any VE that does not pledge loyalty to the ARRL. " We
have determined that we are no longer in need of your volunteer services...Your ARRL
VE accreditation is therefore withdrawn."
The American way is to allow dissent but the ARRL wants to make it clear

the A in ARRL stands for amateur (correct official ARRL pronounation is "am met tor"
with the emphasis on the 'T") the A is not American in any way. (if you doubt we mean
what we say ask Luck Hurder).

6469. Re: 10 mtrs. for technicians?

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-28 00:00:00 UTC
From: Bob McKay <r.mckay-guyton@worldnet.att.net>
Message-ID: <33B5C376.3035@worldnet.att.net>
Source record: 194799

I just clipped this off the frequency allocations on ARRL's home page,
note that technicians have no 10 meter privileges, tech+ does.

10 Meters

Novice and Technician Plus classes:
28.100-28.300 MHz: CW, RTTY/Data--Maximum power 200 watts PEP
28.300-28.500 MHz: CW, Phone--Maximum power 200 watts PEP
General, Advanced, Amateur Extra classes:
28.000-28.300 MHz: CW, RTTY/Data
28.300-29.700 MHz: CW, Phone, Image

Hi! I'm looking for data sheets on IC LB1649 - dual full-brige
DC motor driver for VCR (package hasn't manufacturer's sign,
probably SANYO). Direct search and visit to SANYO web page were
unsuccessful.
If somebody know where I can find this information,
Email me, please.

I can offer one possibility. I've seen Radio Shack mast mount TV antenna
preamps do this. They go into broadband oscillation. This is the style that
looks like a cable trap (small cylinder) which is phantom powered up the
feedline.

:
: ----------------==== Posted via Deja News ====----------------------
: http://www.dejanews.com/ Search, Read, Post to Usenet

MARS/CAP expandable means that the radio can be modified to operate outside the amateur bands on frequencies authorized for MARS (Military Affilate Radio System) or CAP (Civil Air Patrol). There is no need to be concerned about a radio being expanable unless you have an authorization to operate on such nets. Welcome to Ham radio.

The only problem I see is your *REASONING*, according to your *warped*
views organizations/clubs/leagues/ etc. should keep as volunteers
people (like you) who are either *HIGHLY* controversial or have
downright disdain for the people they try to promote/represent.

Evidently in *YOUR* world the following makes sense

David Duke a volunteer for the NAACP
Ralph Nader " " " " Corvair Club of America
Ellen Degeneres " " " " Southern Baptists
Rush Limbaugh " " " Democratic Party
Ted Bundy " " " NOW
OJ Simpson " " " Ginsu knives
Burt Fisher " " " ARRL

>The ARRL leaders of course are not Nazis but if they had an Army would
>you trust them to be just? Would you be free under a government run by
>the ARRL?

Irrelevant, I wouldn't trust a Jiffy Lube tech to perform brain
surgery but that doesn't say *ANYTHING* about how well he/she changes
oil.

The 'new' technology turns amateur radio into a wireless WAN.
Real-time comm disappears, see ya bye. The new technology will thrust
amateur radio into the fore, right to the bleeding edge. Marconi,
DeForrest and Armstrong are among the amateurs who have been
innovators of new technologies that amateur radio has adopted. Oh they
were professionals!

Tell me about this link between Atl, Indy and Denver that is
maintained with power levels of less than one watt. What is the total
power input? 250 watts for box never mind the accesory rf units, how
efficient is that?

The folks blowing smoke about the telegraphy issue don't bother me,
the ones using the smoke screen to advance their own agendas are the
ones to watch.

Date: 1997-06-28 00:00:00 UTC
From: t95194@aol.com
Message-ID: <19970628075300.DAA26824@ladder01.news.aol.com>
Source record: 194845

I have for-sale an Icom 735 for $545.00 plus shipping.
It is in good working condition and has the box & manual. I purchased the radio in 1992, and I am the second owner, so I am not exactly sure on the age,but believe it is 8 to 9 years old. It is just the standard radio, no added extras like filters. I am willing to meet up with someone on the air if they would like to hear the radio.

For more info you can e-mail me at:

t95194@aol.com

Please send inquires to my e-mail address instead of posting them here, since I am not sure when I will return again.

73's & Thanks

Dave (N9NMD)

Prospect Name,

I was wondering if you market products/services using your computer and would like to learn how to do so QUITE a bit better than what you are already doing?!

If so, just say the words (words=MORE ORDERS in the subject line of your return email) and I'll email a free, helpful file that could mean the online marketing difference between massively REDUCED expenses and massively INCREASED revenues and profits.

Sincerely,

M.J. Christensen

6488. What others say about KD4CDB

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-28 00:00:00 UTC
From: Burt Fisher <burt1@rocketmail.com>
Message-ID: <33B52082.10B4F31D@rocketmail.com>
Source record: 194853

The following message was posted in another newsgroup
Burt

Burt Fisher (the one who likes to stir up the pot asked if KD4CDB, James

O'Brien, was "fat").

Well, don't know (or see the relevance of that) but Mr. Obrien was an
avid
CB'er in the Powder Springs/ West Marietta, Ga. area and was known to
"bootleg" with high-powered amps and get into dragged out arguments over

the air with people, alot of this brought on by alcohol and domestic
problems. He got licensed and continued his charade of bravado on
146.54MHz under his newly awarded ham ticket, where he would converse
for
hours with N4UOW, AB4ZV, and other local operators, including much
profanity and threatening remarks. Another young local ham stepped in
and
questioned his operating practices and was told to "get the f**ck off
the
air". This and other such was recordedi traffic was turned over to the
OO
in the area, but word got to James and his nonsense then ceased. This
all
took place in 1991/1992, just a few years ago.

Mr. Obrien has since upgraded his ticket and seems to have diminished
such
childish activity on VHF. Just perusing his profile under Deja News and
noticed some holier than thou remarks toward others. Couldn't resist,
but,
Mr. O'brien, don't you think you are not so high and mighty your self?
We
all make mistakes, but get real. Judging from YOUR past behavior which I

have on tape from the 91/92 6.54 incident, it seems rather ironic for
you
to be barking at others about "operating practice" when even you
yourself
needed a little "correction".

Nothing personal, James, sometimes it helps when others see a clearer
picture of where you are coming from.

Good day,

Marty

6490. The Barbie ham

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-28 00:00:00 UTC
From: Burt Fisher <burt1@rocketmail.com>
Message-ID: <33B520A3.35011123@rocketmail.com>
Source record: 194855

I received the following message which says it all. By the way I coined the term "Barbie ham" to describe those hams that the old farts license when they go into the schools and run ham classes in which rarely even one kid EVER gets on the air or own equipment. The Barbie Hams are all for show.

From: ERIK BAGBY
To: BURT FISHER
Subj: INTERESTING HAMS-WHERE?

I wish you guys could come to Atlanta!! I am a 17 year old ham and have been licensed since 1985- and let me tell you how much I cannot agree more with you guys!! I have demonstrated amateur radio for SEVERAL of my

classes- never seen so many confused and bored people. I mean, let's get

real here- why would the average young person want to get into a hobby full of social oucasts when they can get into computers, drugs, booze,you name it!! I got into ham because I've got radio in my blood- but not everyone is like me!! And hey, we've got so many of those "barbie dolls" down here- just listening to all those old fart gutter scum talk about how their daughter passed her Tech is hilarious. I never

hear them on the air! No wonder I put up a GMRS repeater- people can actually understand the concept of that!!
73's from the armpit of the south,

Message-ID: <33B520F8.F10E1F54@rocketmail.com>
Source record: 194857

A man went to a guts store to get some guts for dinner. He sees a
sign
remarking on the quality of guts offered at this particular gut
store. So he asks the butcher: "How much for Engineer guts?"
"3 dollars an ounce."
"How much for teacher guts?"
"4 dollars an ounce."
"How much for ham operator guts?"
"100 dollars an ounce."
"Why is ham operator guts so much more?"
"Do you know how many hams you need to kill to get one ounce of guts?

I don't agree, Carl. Not that I am an ARRL "leader" (we call them
Divison Directors), but I think I have accepted criticism as a gentleman,
and have been quite responsive on this forum.

The ARRL "leaders" are accountable to the members, twice a year. If you
don't like yours, vote! If you think you have a better way, and will
accept criticism, and be answerable and responsive to people, run for
hte office yourself. That would also have a second benefit to you; it
would give you an approximation of the percentage of amateurs that
support the views you have offered here.

Not that it necessarily applies to your communication with your ARRL
Division Director, but if you used some of the insults I have seen you
use on this forum, I am certain that his or her response would be
influenced in part by the approach and tone of that communication.

HI All:

In 1991 I wrote an article that I posted on the Packet Bulletin Board System on RFI to Cable. Ed Hare was very informative and a great resource at the ARRL. (Thanks Ed!)

This article can now be found on one of my webpages. It is located at:

http://www.elink.net/cm/maras.htm

Most will find this article very helpful in "DF'ing" RFI to Cable TV from Amateur Radio and vice-versa Cable TV to Amateur Radio.

Good luck in your endeavor!

>ideas?

If you are experiencing interference to channel 18 from 2-meter amateur operation, there is clearly a leak somewhere. This could be in the cable system, or it could be in your cable ready TV. All cable channels make use of over-the-air frequencies, so if the cable system and cable-ready equipment are not very well shielded, there will be interference from nearby authorized transmitters.

If this is interference to all or most channels from HF operation, a common-mode choke, about 10 turns of the cable wrapped onto a FT-240-43 ferrite core, installed right at the TV where the cable connects, will probably do it. If, due to poor shields in the cable, etc., the HF signal is leaking in, a high-pass filter may help.

The ARRL wrote a 3-part article on cable TV interference, published in Communications Technology (the journal of the Society of Cable Television Engineers). We can supply photocopies of the article to ARRL members for $2.00 to cover printing and postage. If you are a member, email

bdicosimo@arrl.org and ask that she send the RFI-Cable TV package. She will enclose a bill for the $2.00. (For non-members, the cost is $4, and we do require prepayment from non-ARRL members.)

> that rule as a VE?

Per the ARRL and W5YI You can lose your credentials via the following

(1) when renewal forms were sent out, you failed to send them back

(2) you did not participate in the required number of sessions

(3) you were never a VE to begin with

(4) you assisted an applicant in fraudulently acquiring a license

PICK 1

> >
> >
> > How about bringing the League into disrepute?
> >
>
> So if I critisize the U.S. government I should lose Vetern benefits?

Nonsequiter. The 1st amendment protect you from your scenario. It
doesn't protect you against actions taken by an individual,
corporation or organization. If you disparage, lie, spread innuendo
against those entities, they are free to take any legal action against
you. And the word is VETERAN. As a nongovernment organization, the ARRL
could take legal action against you Burt. However, I doubt they would.
Why waste good money on something that really is looked upon like so much
sideshow entertainment.

I suggest that Burt should go to the ARRL and face them down. He's
always claiming about the gutless hams and those who hide behind
typewriters. I suggest that Burt follow his own words. Maybe a public
forum like Qunicy Market, in downtown Boston. Hell, I'd even supply the
soapbox. I'd be a great excuse to go to Revere Beach and get one of
those great Kelly's Roast Beef sandwiches.

What say you Burt?? Up for the challenge?? I think not

> >

Different address this time. Same Woodside except now has three
offices. The one thing they do well is get folks to pay "reading
fees." It is not known if they have ever gotten ANY writer published.

We both know that Bill Gates marketing department sells IBM
and clones, not IBM. Look at OS/2. It's three times the OS of
Winblows 95, but...

Phil

Why the hell would anyone,with such a shitty attitude towards
Hams,want to be a VE?
Old BURP is the epitome of contradiction:<)

From ARRL Headquarters
Newington CT June 28, 1997
To all radio amateurs

SB QST ARL ARLB035
ARLB035 1997 Field Day Bulletin

Field Day is an emergency preparedness exercise which is held on the
fourth full weekend in June each year. It gives amateur radio
operators an opportunity to learn to operate in abnormal situations
under less than optimum conditions. A premium is placed on
operating skills and equipment development while preparing for a
real communications disaster if one should happen. Good luck in
Field Day 1997.

6513. GMRS or FRS?

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-28 00:00:00 UTC
From: Scott Ryan <crtoy@fyiowa.infi.net>
Message-ID: <33B539E9.6F5E@fyiowa.infi.net>
Source record: 194878

I'm interested in low cost, simple 2-way communication for my family.

My question is, should I jump on the new FRS (Family Radio Service) band wagon or should I spend the extra money for GMRS equipment/license?

The main use will be between family members over short distances (1-2 miles). I realize that GMRS gives me the option of using repeaters. Small size is also important.

Appreciate any input.

You continue to not answer the relevant question. When did YOU VE an exam? By your evading the question it looks very much like you haven't met the requirements to retain your VE and so it is gone.

LET ME REPHRASE THE QUESTION:

BURT, WHEN DID YOU LAST WORK A VE SESSION?? HAVE YOU EVER WORKED A VE SESSION? IF SO WHERE AND WHEN?

I know I was shouting but you don't seem the hear so well. Answer the questions if you can. I think you'll evade the issue again. You're a fraud Burt live with it.

Interesting side note. I checked by credentials and in passing
conversation(s) asked about 12 more ARRL VE's. Seems that all expire as
of the 1st of some month, not the middle. Seems the consensus is that
ARRL credentials expire as of the 1st of some month, not the middle.
Wonder how Burt seems to be the exception..ooopppsss sorry, answered my
own statement.

Notes
=====

The distances were calculated using the International Ellipsoid of
1924 (polar radius 6356.912 km, equatorial radius 6378.388 km).

A description of the method used to calculate distances, with C source code,
is available can be downloaded as a 225k Word 6 file from the Internet at
http://www.kirsta.demon.co.uk/dxrechow.doc.

Propagation modes are those reported by the stations concerned.
However, it can sometimes be very difficult to distinguish between
propagation modes. This is especially so on 50 MHz, where mixed-mode
QSOs are common, and to a lesser extent it applies on 144 MHz. The
propagation information should be read with this in mind.

Station positions were taken from the best available information,
in the following order of preference:

1. Exact latitude and longitude where known
2. Locator sub-square center if given
3. Approximate latitude and longitude from geographical location.
4. Distance as claimed by the QSO participants.
5. Corner of locator square nearest to QSO partner

Calculated distances may change if better information on station
location becomes available.

If you have any information on a possible record or exceptionally long
distance QSO please send it to the IARU Region 1 VHF/UHF/Microwave DX
record co-ordinator:

John Morris, GM4ANB,

via packet: GM4ANB@GB7EDN.#77.GBR.EU
via e-mail: john@kirsta.demon.co.uk

An on-line copy of the latest version of the table is at:

The program you require to access repeaters via iphone is called
RPTRLINK and can be found at:

http://mebcs.ezl.com/

I use Iphone and have used Rptrlink a few times. Find it hangs now and
then, otherwise seems to work fine.

Catch you on iphone sometime

6525. Burt Fisher has now infested Packet too???

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-28 00:00:00 UTC
From: ki5xp@iamerica.net
Message-ID: <5p1qmf$mfu@usenet84.supernews.com>
Source record: 194936

Just recently received a lovely message from Burt Fisher, sent to the entire DX community, via Packet Radio, dispelling the use of the PacketCluster system as a way of working DX.

It seems that Burts crap has now infested the once safe sanctity of packet radio. Guess things are really going to crap, even on packet.

Burt, I understand your feelings towards operators, the companies, and the hobby in general, but I have to ask, if you dispise them in general to such a degree, why do you continue to participate? Just quit. Turn off the radio, unsubscribe from the group?

Please, I beg you, leave packet radio alone. If you feel that its useless, cheating, and generally totally degrading, use the off switch, thats what its for.

Also, given the limited space and bandwidth allotted to most PBBS', childish drivel announcing to the the world your distaste for something is a terrible waste of bandwidth, and something that should solicit from most PBBS operators a total ban on all messages forwarded from you.

DIVISIONAL NEWS

AMATEUR DETAILS ON INTERNET

The SMA recently announced that early in July, details of ALL amateurs would be shown on the Internet including those that are currently suppressed in the Australian Callbook published by the WIA.

The VK2 Division Council has decided that, as a service to our members, a special Post Office Box be obtained. Any member who wishes to do so may use this Post Office Box as their mailing address for Amateur Radio related correspondence - e.g. licence renewals etc.

Please note that this facility will only be available to financial members of the VK2 Division and is not to be used as a general mailing address. Please apply to the office for the necessary application form and details of the very nominal charge involved.

--submitted by Eric Fossey VK2EFY, Divisional Secretary.

JULY TRASH AND TREASURE SALE

Start saving now- start packing up that equipment that's surplus to your needs!

The Trash and Treasure Sale to be held on 27th July will be held at the Dural transmitter site in Quarry Road. The Institute will be clearing surplus stock - plenty of it - and welcomes others to set up tables and car-boot sale points.

There will be a barbecue on site, and there is plenty of space to set upchairs and picnic tables. Bring the family.

We have not had a day out at Dural for many months - why not come along?

There will be more Information in the broadcast in coming weeks. Stay tuned!

--Pat Leeper VK2JPA Councillor.

AFFILIATED CLUBS NET

Clubs are remind that the affiliated clubs net is on at 9 am on 3.595 on 1st and 3rd Sundays of the month. If any member of your club can come up on these days. I can tell that person or persons would be greatly appreciated. The next net is on next Sunday 6 July.

Attention Affiliated Clubs and WIA members Nominations for the new quarterly VK2 division individual award have been called. In other words please dob someone in that deserves the award.

The theme for this quarters award is for Services to Amateur Radio. Nominations should reach Amateur Radio house before 7 July, giving particulars that make this WIA member stand out so that Council can make the correct choice at the July Council Meeting

The value of this quarters award is $40.00 awards are only for WIA members.

Members of council are excluded.

--Ken Westerman VK2AGW, VK2 division Affiliated Clubs Officer and Councillor responsible for Western and Riverina Areas of NSW

WICEN NEWS

The Annual General Meeting will be on Saturday 9th August, at the Hornsby RSL Club, starting at 11am. It will be preceded by an RCOs' meeting, to appoint two Deputy State Coordinators. There will be a practical demonstration of the GRN system, and as an added inducement some door prizes will be given away, namely gift vouchers upon a well-known electronics retail chain and a year's membership of WICEN. Furthermore, Simon Trotter VK1AUS will be speaking on his experiences in RAYNET --WICEN's equivalent in Great Britain -- and the ACT.

All regions are reminded that their accounts should have been submitted by now, for auditing. Similarly, the State newsletter should have been received by now; it contains, amongst other things of interest, a nomination form for the various positions to be declared vacant.

Are you concerned about the future of WICEN? Is WICEN doing a good enough job? How will WICEN be involved in the forthcoming Olympics? It's easy to control WICEN's destiny; all you have to do is fill out a nomination form. Remember, WICEN members are composed of "Amateurs who care".

The Colo Classic Endurance Ride is being organised by Blue Mountains WICEN. It's being held on Saturday 12th July and is a 24 hour event. Checkpoints will be open for a maximum of 8 hours. There is camping available for anyone who would like to stay over the whole weekend. Three more operators are needed to cover all checkpoints, and a meal will be provided from the BBQ when operators complete their checkpoint. If you would like to help out, please contact Neil Fallshaw, at work on (02) 9342-1589, at home on (047) 51-6449, or e-mail as

"neil_fallshaw@optus.com.au".

The Central Coast AGM will be held on 25th July, at the Central Coast Rescue Squad Base, Rose St, Wyong, starting at 8pm.

The Hunter region will be providing safety communications for the "CanTeen Annual Troy Newman Cycle Trek" from Sydney to Newcastle on 27th July; the event co-ordinator is Pauline VK2GTB.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on 015-097-217.

SPACE NEWS

HAM RADIO SERVING AS EXTRA LINK DURING MIR CRISIS

For US ham-astronaut Mike Foale, KB5UAC, aboard the crippled Mir space station, ham radio is providing a valuable supplement to conventional Russian and NASA communication systems. Foale has already used the ham gear aboard Mir to talk to NASA managers and fellow astronauts and exchange health and welfare news as the crew struggles to stabilize the ship after Wednesday's collision with an unmanned cargo rocket. Routine ham radio operation and school contacts have been canceled during the current Mir crisis, however.

Astronaut friends of Foale's gathered late Wednesday morning--just hours after the mishap--at W5RRR at Johnson Space Center in Houston for the scheduled Mir pass and QSO. ''When we got there, it was a packed room. Ninety percent of the room was licensed astronauts,'' said Matt Bordelon, KC5BTL, the SAREX principal investigator.

As Bordelon related: ''A hush fell over the room as Mir started its trek above the horizon. We didn't know if they would be on--power was down to 50 available and all nonessential equipment was turned off. Before we even had a chance to call up, Mike called down for us.''

Following a collective sigh of relief, Bordelon said astronaut Dave Leestma, N5WQC, took the mike and started talking. ''Mike was in good spirits.'' Several others in the room also chatted with Foale during the 10-minute contact. An earlier report that the Mir's SAFEX ham radio equipment was in the damaged compartment was not correct.

Foale asked for some personal items to be sent up when the next Progress supply ship flies. And he had good news. Two of his major experiments are okay. They are in the Priroda module where he and the

cosmonauts are living until repairs can be made to the damaged Spektr compartment. At that time the Mir station should be able to resume normal ham radio contacts. ''Amateur Radio has a very low priority when survival is the key, and power is critical on Mir,'' SAREX Working Group Chairman Roy Neal, K6DUE, said in assessing the situation. A supply ship is being readied and could carry a replacement solar panel and other supplies to Mir within two or three weeks. NASA Shuttle-Mir Project Manager Frank Culbertson said repairs likely would require a space walk or two by the Mir crew.

''It was a very successful pass,'' Bordelon said of Wednesday's contact with Foale. ''All were very thankful for the ham radio and the excellent link it provided.'' Bordelon said he does not expect Foale to have the ham radio on at all times during the current crisis, ''but I think he'll do more passes with us,'' he added.

Bordelon said that astronaut Ken Bowersox was so impressed, ''he wants to get his license next week.'' As Neal put it: ''It's proving that ham radio, as always, is an invaluable aid to health and welfare during critical times.'' Neal said that as repairs progress, ''it's safe to say that disaster has been avoided. Repairs probably can and will be made, and ham radio will continue providing a personal link to help Mike Foale stay in touch with his home base.''

Ham-astronaut and former Mir crew member Jerry Linenger, KC5HBR, told reporters Wednesday that the Mir crew had to power down everything possible, including some life-support systems, in the wake of the collision. The crash initially resulted in a loss of as much as 50% of the Mir's electrical power. By Thursday, the Mir had 70% of its power back.

--ARRL Bulletin 34, June 26, 1997

DX REPORT

BARBADOS - PA0ERA will be active, presumably with an 8P call, from July 3 to 16 from Holetown on the west coast of Barbados. This will be a CW only operation, mainly on the newer bands. He will be on 6 meters, possibly with a 6 meter beacon as well.

FRANCE - Special Event Station TM0VER will be active on all HF bands and 2 meters from the American-Gold Beach Museum on the channel cost of Normandy from June 28 to July 7 using CW and SSB. This operation is to commemorate the historic flight of Admiral R.E. Byrd between the US and France.

ENGLAND- Special Event Station GB2CFG will be active on all bands using CW and SSB on June 28 and 29 to commemorate the 25th Anniversary of Guiding in Chandler's Ford.

SVALBARD - JW2PA will be operating on CW and SSB on 80 to 10 meters.

PUERTO RICO - NP3G and NP3F will be active from until July 16 using CW mainly on 40 meters.

NORWAY - LG5LG will be active on June 29 from the joint station owned by Norway and Sweden at Morokulien. She may also use the callsign SJ9WL.

POLAND - Special Event Station 3Z2GD will be active to celebrate 1000 years of Gdansk City during the month of July.

CANADA - The World Police and Fire Games will be held this year in Calgary, Alberta. Amateur Radio operators in Calgary may use the special prefix CG6 from June 27 to July 4 to commemorate this event.

HONG KONG - Special Event Stations VS97SAR and VR97SAR will be active until July 2 on all bands to commemorate the return of Hong Kong to China.

NAMIBIA - V5/ZS6YG plans to be active on 160 and 80 meters in July and August.

NIUE - ZK2PJ and ZK2JJ will be active for the next two years.

--ARRL DX Bulletin 28, dated 26 June, 199

NEWS FOR CLOCK WATCHERS

The midnight ending 30th June, this Tuesday, Zulu time, will be a momentous occasion for clock-watchers. A "leap second" will be added at 23:59 UTC on 30th June, as decreed by the International Earth Rotation Service, which is a branch of the ITU. This is necessary from time to time, as the Earth is slowing down (much in the manner of your scribe), and corrections must be made, similar to a "Leap Year."

This raises a question, especially in the light of a recent broadcast: is the year 2000 a Leap Year? Your scribe has seen many incorrect answers, especially as to whether the years 1900 and 2100 are also Leap Years, and he would love to hear the consensus on the Callbacks: which, if any, of the years 1900, 2000, and 2100, are Leap Years, and why?

Anyway, we digress... Those with access to a GPS receiver can check whether it will operate correctly; just before 10am (Eastern Time) on 1st July, monitor the time as displayed. It should increment from 23:59:59 (assuming that it's set for UTC) to 23:59:60, thence to 00:00:00. Apparently, some lesser units do not recognise leap seconds. We understand that the "1194" time service, along with Australia's own time and frequency station "VNG", handle this nicely, but we wonder whether Unix's "NTP" service (Network Time Protocol), accurate to a few milliseconds, can cope.

-- Dave Horsfall VK2ZTB, resident Divisional GPS frea

CLUB NEWS

CHIFLEY AMATEUR RADIO CLUB

The club is open every Saturday at 1:30 PM.
The address is, The Good Shepherd Church Hall, at Hyatts Road
Plumpton.

Members guests and visitors are all welcome.
The club holds a 2 meter net on the club repeater VK2RCZ, On Friday
nigths at 8.00pm. All checkins are welcome.

The Frequency is 147075 with a positive offset.
If you have internet , Checkout our Home page at.

http://www.zeta.org.au/~ramondw

For more information ring (02) 9837 2226 or (02) 9834 1186.

SEE YOU ALL AT THE MEETING.

BRIAN VK2UBF PUBLICITY OFFICER I.A.R.S.

HORNSBY & DISTRICT ARC.

Well the formal monthly meeting has passed, it was a brief meeting,
although all reports were dealt with, and general business arising was
dealt with in the correct manner. This meeting was very well attended
with standing room only left in the hall, there were five visitors present
one from ZL land, two from the classes, and two that intend obtaining
their licence in the near future. The next meeting takes place, on the 8 th
July 1997, at 8:00 pm. Meeting place is, Mount Colah Community Centre,
Pierre Close, Mount Colah. (Near the Eastern Entrance to the Railway
Station).

Training classes:- The classes are too far advanced now to accept any new students, but for infomation on future classes phone Tony VK2BTL on 9487 3383. or John VK2WRT on 9807 2490.

The Club conducts, a net every Monday night at 8:00pm. on VK2RNS. The frequency is 147.250 with a positive offset. Feel free to join in. All are wellcome. Listeners set your scanner to 147.250.

Should you wish to know more about the Club, please write to :- H.A.D.A.R.C. at Post Box 362, Hornsby, 2077. or contact the Publicity Officer, John VK2WRT on 9807 2490.

--Submitted by John W Turner VK2WRT - Publicity Officer

FISHERS GHOST AMATEUR RADIO CLUB

Classes are held in Basic Electronic Theory and Morse Code every Wednesday Evening from 7:00 pm at the Campbelltown High School, Chamberlain St. Campbelltown

Also every Third Tuesday of the Month from 7:30 pm, at the Campbelltown High School, is the General Meeting night with lectures on popular subjects.

Members are reminded that JOTA is fast approaching. The club will again be involved In October.

Coming lectures:

July15: High Speed Packet
August 19: Introduction of the Club's Web Page and a discussion on Amateur Position Reporting System (APRS) by Daryl VK2TDS

If you would like to submit a news item for inclusion in the VK2 Divisional broadcast, please send it to us by one of the following means:
by post to PO Box 1066, Parramatta, New South Wales 2124
by fax to (02) 9633-1525
by packet radio to BCAST@VK2WI.NSW.AUS.OC
by Internet email to wiansw@sydney.dialix.oz.au

The deadline for submissions is 2pm on the Friday preceding the broadcast; if sending by packet or Internet, please allow for forwarding delays in the network.

If sending printed copy, please double space your text, leave wide margins, and use a plain font such as Arial or Helvetica for clarity. Please proofread your text, check your grammar and punctuation, avoid using shorthand and abbreviations, and use the exact words you wish the announcer to say on air. Remember, the more care you take in preparing your news item, the better the announcer will read it.

I don't think so. Perhaps licensed hams in the U.S.A. should have a current copy of part 97, but there are rather a lot of licensed hams that do not reside in the U.S. Why should they have a copy?

Yet it's not unreasonable for one of these licensed hams to ask a question about U.S. privileges, particularly given how complicated the U.S. structure is.

The U.S. is not the world. The world is not the U.S.

6533. FS: Yaesu FT-890AT & mobile/base accessories!

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-29 00:00:00 UTC
From: "Michael Conner, KQ3P" <mconner2@utk.edu>
Message-ID: <33B71F2C.138C@utk.edu>
Source record: 194694
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.radio.amateur.misc,rec.radio.amateur.antenna,rec.radio.amateur,rec.ham-radio.swap

FOR SALE:

YAESU FT-890AT in excellent condition. Has built-in antenna tuner (great for mobile use), built-in cw keyer, 100 Watts output, general coverage receiver, and all mode transmitter. Comes with hand-held mic. Still have original box and owner's manual. I always found this rig to have a really great receiver.

Also for sale:

YAESU YS-60 SWR + Power meter (matching color to 890)
ASTRON RS-50M (with meters) (barely used)
BENCHER BY-1 Keyer (barely used)
HUSTLER Mobile resonators for:
80, 75, 40, 30, 20, 17, 15, 12 and 10 meters (low power models)
AND two masts - one stainless steel and other is fiberglass covered.
Also have a mast mount for base use.
(all resonators in good condition and worked well for mobile and base!)

and I'll throw in a 75' length of 9913 coax (no connectors).

Prices dependent on who pays shipping, but figuring:

FT-890AT $750
YS-60 $ 70
RS-50M $175
BY-1 $ 60
Hustler $150 for all including masts.

Would prefer to sell entire package. Am selling because work hours are too long and I don't travel any more and the cash would be useful.

Please e-mail me for further details, or call in the afternoons at work: (423) 974-0123.

Thank you!

So sorry, copies, would not be acceptable. You've proven time and again
that you, like your accusations and accreditation(s), are less than
credible. A copy can easily changed, faked, etc, etc. In fact, the same
hotshot vo-tech students you have that can actually assemble a computer
from completed components can probably do that for you as an extra credit
assignment.

Now if you wish to send the original, maybe then.

6556. Burt's VE Bull

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-29 00:00:00 UTC
From: kc5egg@ix.netcom.com
Message-ID: <5p5rbp$kgr@sjx-ixn7.ix.netcom.com>
Source record: 194744

Burt keep spewing forth his propaganda about the ARRL lifting his VE ticket yet continues to refuse to supply the date he last worked a VE session. Burt expired due to lack of activity and is trying to make a "poor me" case out of it. I seriously doubt the ARRL givea a rat's ass what Burt says on the internet. He just didn't fulfill his obligations and that's the end of it. If Burt replies to this post without supplying date for VE sessions he worked in the last year I will take that as confirmation that my hypothesis is correct.

I took note that Burt implied a physical challenge to Mr O'Brian. Congrats Burt this guy appears to be less than 70 years old. You must have grown some guts. Oh he is 1000 miles away well that's safe enough. Take care with this one Burt some one might give him a plane ticket to come see you and judging by his size and attitude he might just administer a level six ass kicking on you.

>Not really. Cross banding from one ham band to another is not
>prohibited.

I agree that it isn't crossbanding, but then it isn't any part 97
violaton that I can think of. If my understanding is correct, these
doing this deed were feeding the audio of a 2m repeater
output channel on to a CB channel. The only radio transmission
in question would be what is allowed on a CB channel?
Given the pretty much free-for-all aspect of CB, I doubt anyone
at the FCC would care at all.

Ditto these comments.

>I can't find anything specific in part 95 regarding the CB side of this
>(but I didn't look very hard), but 97.113(e) prohibits an amateur
>station from retransmitting signals emanating from any type of radio
>station other than an amateur station (with some exceptions). In other
>words, amateur stations are prohibited from retransmitting CB traffic.

But as it was stated, the opposite was going on...CB retransmission of
an amateur audio signal.

>There may be a loop hole... if you were using a phone patch. There are
>provisions in part 95 that allow a CB radio to be interconnected for
>phone patching. Amateurs can run phone patches as well. If all
>requirements are met, I guess one could "cross band" CB to amateur via
>phone lines. Kinda far fetched - I would be that what Eric is hearing
>is being done legally.

But the above seems to not be crossband operation, which I
believe implies two way contact, but rather a
broadcast situation.

> ten meter band is open to technicians?

1. All licensed hams should have a current copy of part 97.
2. In case you are not licensed yet......
A technician may only use 10 M if the license was issued before
Feb. 14, 1991; or he has passed elements 1(A), 1(B), or 1(C)
and has the CSCE indicating such.

ie: You didn't say tech PLUS.

Yeah, it's tuff out here Fat Boy. Nothing exciting going on. No drive by's,
no car jackings, no street gangs, none of that exciting stuff like you have
over there in the United States of Drug Dealers. Not too many white Fat
Boys either, most of them got fed to the fish.

>Not enough young boys around for you to stare at?

I'm starting to worry about you Fat Boy, you seem to be dwelling on this 'young
boy' thing quite a bit lately. Are you constantly thinking about 'young boys'
or is that just your standard pathetic attempt at a 'flame' ? Coming from you I
guess we could call it a Fat Boy Lame Flame (TM) ?

Strange, since I certainly dissent with the ARRL on the code issue,
I'm a VE and ARRL member yet my comments are printed in the
correspondence section of the July QST.

I'd have to concur that Burt is exhibiting the typical "gutless ham"
nonsense he rails on and on about.

Take this latest "I was kicked out of the ARRL VE program" crap.... If
Bert were a "Real Ham", I guess he'd be driving out to Newington and have
a real "face-to-face" with the ARRL/VEC. After all, Bert is only 2 to 3
hours from Newington by car -- a leisurely morning drive down US 195 and
then out US RT 6...

I agree. Ham radio seems to be degenerating more rapidly than in society
in
general. I have already decided not to encourage my children to become
hams.
If we lose our bands I would not blame Washington. If we keep this kind of
thing up, here and on the air, we should all be prepared to get CBs at that
is
all that will remain.

And not to mention, that looking at most hams at the hamfests, the picture
posted looks pretty good by comparison.

You guys posting comments like that should be ashamed of yourselves.

There's even something better in the works...

How about "cell" phones with group/individual capabilities? Full duplex,
of course.
Worldwide, of course. No license, of course. Encryption, if desired. 5
cents per
minute, no equipment costs. And the "newsgroup" mode where anybody can
just
drop in.

This is where our frequencies are going.

SB DX @ WW $OPDX.311
Ohio/Penn DX Bulletin No. 311

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 311
BID: $OPDX.311
June 30, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 28.8k-1200 Baud 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2YQH & The 59(9) DXReport, W3UR & Daily DX, N4ZY, W4NS, WA6YOO, K7DBV, NL7TB, KD8JN, DJ5AV & DX News Letter, DL2HEB, DL8OBC, F6AJA, G4BUE & DX News Sheet, JA1ELY, JA4DND, JH4RHF, LU6BEG, OH1NOA/OH0NOA, RA1QHJ, RA3AUU, VE6JO, VK4AAR and ZL3RG for the following DX information.

3RD ANNUAL RUSSIAN IOTA/DX CONVENTION will be hosted by the Russian Robinson Club in association with Russian Contest Club and Soyuz Radiolyubitelej Rossii (the Union of Radioamateurs of Russia) on August 29 to 31st, 1997, in Voronezh City, just 300 km south-east of Moscow. The announcement of details will be sent to all OPDX InterNet Subscribers as an additional bulletin.

3W, QUAN PHU QUOC ISLAND, (New IOTA - VIETNAM). By the time you read this, Hiroo, JA2EZD, should be active as 3W6ZD or 3W6PQ. Hiroo was to fly to Phu Quoc Island on the afternoon of June 29th with his TS-850S and tri-band yagi. He will operate all bands including the WARC bands. There is only one flight in a week, so Hiroo will stay and operate until 6 July.

5A, LIBYA. The "DX News Sheet" reports Charly, OE3KLU, and others from Icom-Austria Radio Club will be active from August 28th to September 7th, as 5A28. The group has applied for activity on 160-10 meters and also 6 and 2 meters.

FG, GUADELOUPE. Alain, F2HE, will be active as FG/F2HE now until September 25th. He activity will be mostly on CW. He has plans to try to activate some of the neighboring islands.

HF PROPAGATION QUESTIONS. Lee, KH6BZF, propagation guru who writes articles for several DX publications and magazines, informs OPDX that he is willing to receive questions from readers who send their questions to Lee's E-Mail address. He is willing to answer those questions direct

or through his publications to inform all readers. Lee states, "If I don't know the answer(s) I will do my best to find out and respond. Fair enough?"..... 73, Lee "KH6BZF REPORTS" at E-mail: leewical@aol.com

HL, ANMYU-DO ISLAND (South Korea). Operators HL1TUE, HL1TMU, HL1MKT and one other will activate this Korean Island (IOTA AS-080) as HL0N/3, from July 4-7th. Activity will be on CW/SSB on 40, 20 and 15 meters. QSL via HL1TUE. Via the bureau at: CPO BOX 162, SEOUL KOREA. Or direct to:
120-110
Eom,Sin-Jo (HL1TUE)
21st. Century Const. Research Lab.
Dept. of Architectural Eng.
YONSEI UNIVERSITY, 134 SHINCHON-DONG,
SEODAEMUN, SEOUL, KOREA

IOTA HUNTER'S NEWS.....
Matthias, DL4OCL, will travel to Poel Island (IOTA EU-098, DID O-002) and join the RSGB IOTA Contest fun (July 26 to 27) as DL4OCL/p on CW and SSB. QSL to DL4OCL via bureau or direct to: Matthias Deutscher, P.O. Box 100412, D-30942 Ronnenberg, Germany.

Felix, DL8OBC, will again sign DL8OBC/p from Helgoland Island (IOTA EU-127, DID N-014). Activity can be expected beginning during the IOTA Contest weekend and will last approx. one week. QSL to DL8OBC via bureau or direct to: Felix J. Riess, P.O. Box 1253, D-30984 Gehrden, Germany.

1996 IOTA Contest winners OH1MDR, OH1NOA and OH1MM will once again activate Sandstrom Reef (EU-96) for the IOTA Contest. The group will probably use the call sign OH0MDR/1. Special attention will be given to the IOTA hunters in NA and JA. Their one target is to make even more than last year's 2700+ QSOs. QSL via OH1MDR.

Frank, YJ8AA, has had delays getting the boat overhauled, but should have it ready by the end of June for his departure soon for "The Shepherds Islands" (OC-111). QSL via VK4AAR direct only.

Alex, VE2AFC, will be active as VE2AFC/VE2 from Coudres Island (NA-128) sometime between July 15th and August 15th.

ES1RA/1, ES1QD/1 and ES1OX/1 will be active from Aegna Island (EU-149) July 16-23rd. The group will then be active during the IOTA Contest as ES1QD/0 from Muhu Island (EU-034).

Ulli, DL2HEB, will use the OZ/DL2HEB/p callsign from Laes Island (EU-088). He will be active from July 14th to August 3rd. Operations will be on 80-10 meters CW, but check the IOTA and QRP frequencies, especially 14.040 and 14.060. He does plan to take part in the IOTA Contest. QSL to DL2HEB via the bureau.

Hiromi, JA4DND, reports his plans to Oki Archipelago (AS041) were cancelled because of a big typhoon which hit this area. They will go to Oki the next chance they can in the next few months.

Evangelos G Papapanagiotu, reports that during the IOTA Contest the special callsign J48LSV will be active from Lesvos Island - Greece (EU-049). The operators (members of the Amateur Association of North Aegean) are expected to be SV8CRI, SV8DCY, SV8DTL, SV8DTD (maybe more). They will be active on all bands (80-10 meters) on SSB. QSL via Bureau or Direct (PO Box 46, Mytilene, GR-81100, Greece).
JX, JAN MAYEN. Begin looking for YL operator Unnui, LA6RHA, to be active from July 25th through August 1st as JX6RHA. She will be using the military amateur radio station. Operations are planned for SSB but with some CW on demand. Keep a close look on 14248 kHz. QSL to her home call.

NEWLY ELECTED OFFICERS. At the San Diego DX Club's June meeting, the membership elected the following slate of officers to serve for the 1997-1998 term: President- Bruce Clark, K6JYO; Vice President - Jim McCook, W6YA; Secretary/Treasurer - Harry A. Hodges, WA6YOO; Directors - Bill Denton, NG6Z, Larry Serra, N6NC, Bob Pace, WB6NBU and Harvey Hiller, KD6QK. The membership also nominated Dick Shanks, W6BZE, founding President of the San Diego DX Club in 1946, to the position of President Emeritus. His election to this position was unanimous.

NP3, PUERTO RICO. Terry, W5XJ, will be active now until July 16 as NP3G. Activity will be mainly on 40 meters CW. Terry has plans to permanently move here by the end of summer. Also, look for Karen, N4YGP, to be active there as NP3F.

OA175, PERU (Special Prefix). Cesar, OA4QV, states he will be signing with the special prefix OA176 in commemoration of 176 years of Peru's independence. Activity will be from July 1-31st, with their Independence day taking place on July 28th. Operations will be on SSB on 40, 20, 15 and 10 meters. QSL direct with a SAE plus two International Replay Coupons (IRCs) to: Cesar Aguirre, P.O.Box 957, Lima 18 PERU.

QSL INFO AND NEWS.....
Jean, F6AJA, has received the HP1XBI logs up to May 13. All direct request are on the way. It's the same for all direct requests for HP1XBI/1 from Contadora Island from the end of March.

QSLs for UA3AP are now via his U.S. stateside callsign of K3AO either via the bureau or direct: Sergei Kulyov, P.O. Box 3497, Columbus, OH 43210, USA

Last week we mentioned N4BP would be active as ZF2DE/ZF8 and to QSL via N4BP (refer to OPDX.310). Since then, Jim, N4ZY, 4th Area QSL Manager Bureau for W/K/N (suffix B) states/advises OPDX readers that N4BP does not keep envelopes at the bureau and suggests not to send cards to the bureau (only direct). All the unclaimed cards over the past several years that have been addressed to N4BP had to be destroyed. Jim reports this to save a lot of cards from going into the round file.

RUSSIAN ACTIVITY. The "Polar-97" DXpedition has began. RA1QQ, RW1ZZ, UA1ZIC, UA1ZJW and UA1ZKW have reported that they started their DXpeditions to the islands of Barentsevo Sea. Look for them to be active from the

following islands: Kildin Island (EU-82), Bolshoi Olenij Island (EU-61), Lumbovskyi Island (EU-161) and Novaya Zemlya Island (EU-35). They were hoping to receive a special callsign (which did not happen) when they activate Bolshoi Ainov Island (a new IOTA, EU-???). Instead the team will be signing homecall/1 and the team callsigns of UE1QQQ/1 and UE1ZNF/A. This DXpedition is dedicated to the 60th anniversary of renaming North Russian flotilla to Northern Navy (Severnyi Flot). QSL via UA1ZJW, P.O.Box 72, Severomorsk-1, 184600, Russia /or via RA1QQ, P.O.Box 24, Cherepovets, 162627, Russia.

SPECIAL EVENT. Look for VI0ANARE to be active from July 1st to October 31st to celebrate the 50th anniversary of the Australian National Antarctic Research Expedition (A.N.A.R.E.). The suggested frequencies are:
SSB - 3620, 7075, 14175 and 21175 kHz
CW - 3532, 7020, 14052 and 21052 kHz
WARC bands by request and all frequencies are "+/-" QRM. QSL direct only to VK4AAR (Alan guarantees a fast reply, but no bureau facilities are available for him). Bureau cards go to VK4ARB.

SPECIAL PREFIXES.....
The city of Calgary (AB, Canada) will host the World Police/Fire Games. Industry Canada assigned a special callsign prefix "CG6" for use by amateurs in Calgary area. This special prefix is valid now through July 4th.

Watch for amateurs in Thunder Bay, Ontario, using the CJ3 prefix instead of their VE3 prefix, and also the CK3 prefix instead of the VA3 prefix, during July 12-31st, in celebration of the Scouts Canada Jamboree.

USI ALERT. Randall, KD8JN, will activate Hatteras Island July 5-12th, as KD8JN/4 for the "United States Island Award" program. Hatteras Island as an USI number of NC-005S (also an IOTA of NA-067, Grid Square FM-25 and is located in Dare County). Activity will be on all bands. Suggested frequencies are: 3785, 7260, 14260, 18128, 21260, 24950 and 28460 kHz. QSL via the bureau or direct with a SASE to: Randall Phelps, 1226 Delverne Ave SW, Canton, Ohio 44710-1306 USA

USI ANNOUNCEMENT. The United States Islands Awards program (USI) will kick-off the summer with an operations from Northern Canada (Ops: KC7FVA, KC7KHU, and NL7TB). VY1USI will be active before and during the Canada Day Contest from YT-002, 03, 04, and 05 and from a couple of "new ones" starting around 1700z on June 30th. The team will focus on the emerald green Yukon River in Whitehorse. VE7USI operation will commence from Atlin Lake (Northern BC) on July 2nd around 1700z from several "new ones" through July 4th. For a feeling of being there, try:
http://users.yknet.yk.ca/bbdo/cascade/about.htm
Photo QSLs will be available from NL7TB (SASE to: J Reisenauer, 23406 East Kennedy Rd., Benton City, WA 99320).

VK9L, LORD HOWE ISLAND. Jun/JH4RHF, Kumiko/JR4DUW (YL) and Hiro/JR4PMX are planning a trip to Lord Howe for their summer vacation during the

IOTA Contest weekend. The operation itself will be from July 24-29th or so. The callsigns they hope to be assigned are; VK9RH, VK9YL and VK9MX, respectively (not licensed yet). Please note these callsigns are for VK9L-land. Activity will be 80-10 meters, SSB/CW. There will be some 160m and RTTY activity, if there are many requests. QSL via JH4RHF, for VK9RH and YL (or operation by these two). QSL via JR4PMX for VK9MX (or op by JR4PMX).

XW, LAOS. It has been reported that Zorro, JH1AJT, is in Laos with a group that will be active now until July 2nd. This is not Zorro's first time to Laos as he was there in December, 1989, as XW8KPV. Reports indicate they will operate on as XW1A and on SSB as XW1 (YEP! That is the callsign). The group will be operating on 6 through 160 meters. QSL via JH1AJT.

YJ, VANUATU (Activity on 6 meters!). Stuart, YJ8UU, will be active from Vila over the next 3 years. Look for him to begin activity around July 19th. Operations will be on all bands including 6 meters. His station consists of an Icom 706; antennas are a Gap R5 vertical and a 3 element Delta loop for 6 meters with 2 elements for 20 meters. He will be active daily at 0630z on 50.110 MHz. QSL via ZL2HE.

Z2, ZIMBABWE. "THE 59(9) DX REPORT" states Cedric, N9YXA, will be active on 160-10 meters, mainly SSB, from August 3-21st while providing communications for a church convoy. Callsign is yet to be announced.

ZF, CAYMAN ISLANDS. The Cinco Nueve Contest Group has announced early that they will operate as a Multi/Single from Little Cayman Island as ZF2RV during the CQWW CW Contest, November, 1997. Operators will be:
Al, K7AR (ex-WB2TMP, op at YK0A); Lee, N7NU (ex-WB7SND, op at XR0Z);
Mark, N7MQ (ZF2MC, and ex-N7MCA); Ron, WJ7R/ZF2RV; and Gene, K7DBV (ZF2BV).
ZF2RV contest QSLs are via AA6BB/7; cards for all other QSOs between November 24th and December 3th (including ZF2RV) go to each operator's home call, CBA or via W7 Bureau.

ZP, PARAGUAY. Ernesto (GADX Bulletin Editor), LU6BEG, will be operating from Asuncion as ZP5/LU6BEG from July 9-13th. Operations will be on 80-10 meters CW/RTTY/BLU. During the IARU Contest, he will team-up with Renato as a Multi-Op station using the callsign ZP5XF or ZP0M (to be confirmed). QSL ZP5/LU6BEG to Box 1589 - 1000 CF - Argentina and ZP5XF/ZP0M to Box 1937, Asuncion, Paraguay.

6584. 2 Meter Repeaters and Packet in Winthrop?

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-29 00:00:00 UTC
From: mshimer@ix.netcom.com
Message-ID: <5p6q01$q5r@sjx-ixn3.ix.netcom.com>
Source record: 194772

I will be vacationing in Winthrop, Wa. later this summer, and was wondering if anyone knows of a 2 meter or 440 MHz repeater in the area (or in near-by Twisp), and if there are any packet nodes or users in the area?

Thanks,

KA7JRE

I am 178 miles from Newington, I was there today. My daughter works
there
and has some comments about hams. She says you can tell them by the
expensive handhelds they carry, some people belive they are police until
they see how overweight and poorly dressed
they are. The route from here is 6, 195, 6, 395, 84 but it was hot there
today.
No answers on the 146.88 repeater.

Your comments about my wife and the fact that no one here calls you on
it
speaks volumes about you and the others on this group that stand silent.

Further if we were to appear in court (and I have MANY times as in
Barnstable Superior Court,
Barnstable First District court, Orleans District court, 8th Judicial
District in Alaska, several
courts in New Jersey and I was in jail at MCI Concord and barely avoided
Barnstable
County jail) don't you think I might just bring your messages along?

Be careful who you play with on the internet. I know I am because there
are some real
nasty dudes here. My name is in the phone book, and the callbook. Look
and post.

I don't know this radio, but the symptoms described suggest that the AM/FM carrier oscillator is at fault. The radio probably has 3 carrier oscillators, one for AM/FM, one for USB, and a third for LSB. Typically, these are crystal oscillators. It sounds like the AM/FM carrier oscillator is temperature sensitive. This is likely the crystal itself given the amount of shift. If my diagnosis is correct, you'll need to replace this crystal.

That's not correct, Techs don't have any 10 meter privledges. Tech PLUSES
do though, CW/data from 28.100-28.300 and voice from 28.300-28.500

Well, OJ might make a good spokesman for Ginsu knives.
Your point is sharp about the others, however.

Call Motorola Semiconductors and see if they're still giving away evaluation
kits for the MC2833. Dandy little single chip FM transmitter, and they give
you a circuit board to mount it on.

This sounds great! My only questions are; what did I go through all the
trouble of getting a Ham license for, and what should I do with all my
radios and antennas?

Hello Burp, that last post will sure keep the lawyers here in georgia busy. Hope you like litigation you perjuring piece of shit. CU in Federal Court,we're going to get that call before it's over. N4UOW has someone in his family who can Try cases in front of the US Supreme Court.,Great timing just spent field day with several employees of the commission that work at Powder Springs, Ga. This and all further posts will be referred for prosecution. KD4CDB And does'nt Burpetta look unhappy!

>amateur radio into the fore, right to the bleeding edge. Marconi,
>DeForrest and Armstrong are among the amateurs who have been
>innovators of new technologies that amateur radio has adopted. Oh they
>were professionals!

They became professionals, in fact they invented the profession. That's
the way it often works at the cutting edge. Stodgy incumbents don't often
embrace new ideas. That's frightening to them and threatens their vested
interests. They expend their energies trying to get government to protect
their incumbent status with restrictive regulations.

>Tell me about this link between Atl, Indy and Denver that is
>maintained with power levels of less than one watt. What is the total
>power input? 250 watts for box never mind the accesory rf units, how
>efficient is that?

It is very spectrum efficient. It requires very little of the spectrum/SNR
resource to operate. It is driven by a Pentium laptop at present (on this
end at least), and that draws about 35 watts. The RF section is essentially
a dongle that hangs off the laptop's sound port. It fits in a small Hammond
box.

>The folks blowing smoke about the telegraphy issue don't bother me,
>the ones using the smoke screen to advance their own agendas are the
>ones to watch.

The ones trying to protect their vested interests any way that they can are
the ones to really watch. They're trying to rob the future by clinging to the
past.

> Pay my way or come to my door.

Well here it is...the typical gutless ham response. What a little dog...all bark, no bite. All go absolutely no show.

Quite frankly, the 4 bucks worth of gas you'd need is tempting Burt, but somehow I figure you for the consummate con man. In other words, take the money and run a no show an all talk no action type of ham. How typical How you.

Funny that whenever you make the allagations everyone else is suppose to pay you way. Why is that Burt??? I'd be more than happy to meet you in Boston, but you'd have to pay your own way. In fact, why not make it a field trip for your hotshot vo-tech students, then the school can pay. Be pretty neat to see what a true man does in the face of adversity. In other words, you can meet face to face with all the fat white gutless hams you keep referring to.

What say you Burt?? BTW Las Vegas odds are 11 to 1 having you as a no show. Come on Burt, prove YOUR NOT GUTLESS!!!!

This is what more and more people are asking themselves. With a computer, Internet connection, and "Internet Phone" or similar software, it is now possible to talk around the world for free. Why hassle with Morse code requirements, antenna restrictions, RFI, and "YE OLDE FAHRTZ" telling you that you're not a "real ham" because you didn't ride a bus 10 hours each way to take your license exam in front of an FCC commissioner who made you copy 20WPM letter-perfect back in 1939.

It's called "MODERN TECHNOLOGY." Accept it or perish!

Welcome,

Chair-Pak is a great idea!!!

It's a Backpack AND a built-in Chair!!!

See it at http://www.chairpak.com

3 Sizes Full Pak, Day Pak, and a Child Pak!

How many times have you gone somewhere and needed a chair ?
beach waiting in line with friends
hiking around the campfire conventions
air shows at the park in line at the DMV
outdoor concerts hiking trails car shows
camping on campus reading at the poo l /beach
fishing trekking rest areas
poetry readings jams outdoor games
outdoor sport events story telling to children picnics
theme parks national parks hunting
backyard outdoor weddings and anywhere you want to SIT!!!

Carry your stuff and your chair where ever you go!!!

Where do you want to sit today?

Chair-Pak is made of the strong durable Dupont Cordura and the frame is of strong and light T6 aluminum.

If you would like to order, or get more information about Chair-Pak, please visit our web site

http://www.chairpak.com

Nothing new here; amateur radio is simply mirroring the gradual
deteoration of society in general.

It's a crappy world we live in...and it will only get worse, not better.

> A few thought I never was a VE, one idiot claimed that the VE expires at
> the end of the month.
> So at least let me prove a few you WRONG but hams NEVER apologize.
>

Couldn't be me, as I stated the people I talked to THOUGHT the expiration was the 1st of the month. But it (the jpg image) looks legit, so I will retract my doubts that you were a VE. Guess you lost your accreditation due to lack of participation. According to the handbook, you are required to actively participate in a specified number of VE sessions., it's the number 1 reason. Failure to participate is grounds for credential withdrawal.

Burt, to get your credentials reinstated, all you'll have to do is prove you were at a VE session and participated in it. I do not have my handbook and am citing from memory BUT I could be wrong so someone else would have to provide chapter and verse. Still, the ultimate decision rests with the ARRL VEC

However, based on the presented evidence, Burt was a VE, at least, according to Burt, till recently. Everything else stands till proven otherwise.

The myth that radio amateurs _ever_ invented any new/important/cutting-edge/profound/woweee-zoweee technology etcetera, is another "myth". Amateurs, by and large, have not been inventors. The strength of amateurs is "tinkering" which usually has resulted in popularizing the use of new techniques (invented elsewhere) or reducing "expensive laboratory curiosities" to practical usage. Even Marconi, who you mentioned, was not an inventor, but what today might be called a systems integrator. He took the inventions of others and proved a practical use for them. For this he get's the reputation as "father of wireless", when in fact he invented nothing at all.

The "technical strength" of our hobby will not be in "bleeding edge" technology, but in the practical application and complexity reduction of technology invented elsewhere. It's what we're good at, and many industries, such as the hated "Little LEOs", owe their existence to that sort of "tinkering" by amateurs.

I don't know what year model Explorer you are putting the radio in but I have a 1995 Explorer.

I installed a Standard 5900 (6m,2m 70cm) mobile and use 2 antennas for communications and AM/FM.

I removed the factory AM/FM antenna and installed an Antenna Specialist disguise cowl mount antenna cut for 6 meters. I have a splitter that runs off it, and goes to my AM/FM radio. The other side of that splitter goes to my duplexer which splits off the 6 meter signals from the 2 mter and 70 cm signals. I am using a Diamond dual band antenna mounted on the roof. So the only thing you see on my Explorer is what appears to be an AM/FM antenna and a dual band antenna that looks like a cell phone antenna.

I would recommend you hook the rig directly to the battery or the power block under the hood. This helps reduce if not totally eliminate alternator whine. Also be sure that BOTH power leads, positive and negative are fused. The radio could be damaged under certain conditions if you tie the negative lead directly to the battery un-fused.

I had a problem at one time with RF getting into some of the electronics under the dash. I could transmit on 146.52, high power, and the drivers side window would come down about 1". I traced the problem down to the duplexer under the dash. This model duplexer has UHF female connectors on short lengths of coax. These connectors were not installed very well at the factory. I cut them off and installed silver plated teflon UHF males connectors and put a female adapter on them and havn't had a problem since.

In article <5743F218BEC0D011825C0060B01AC1F602591D@challenger.grtk.com>,
John Mouw <jmouw@grtk.COM> forwards someone elses comments:

>I wish you guys could come to Atlanta!! I am a 17 year old ham and have
>been licensed since 1985- and let me tell you how much I cannot agree
>more with you guys!! I have demonstrated amateur radio for SEVERAL of my
>classes- never seen so many confused and bored people. I mean, let's get
>real here- why would the average young person want to get into a hobby
>full of social oucasts when they can get into computers, drugs, booze,
>you name it!!

An argueable premise, but one which deserves further analysis. Let me
construct an analogy:

I've worked for several years on a firmware engineering project for a
client of mine. The client's product was a stand-alone point-of-presence
identity verification box. It used a fairly common but not popular 8-bit
embedded microcontroller.

Anyway, after working on this project for 8 years, the client complains to
me how they are not getting any "good press" at trade shows. They're not
getting any leads. No sales. Nobody is coming to their booths at trade shows.
So, they ask me: "why are we failing?"

Now, I have a pretty good idea why, but being that I've never really been
involved in the "business" end of their company, I merely answer "your
product presentation is too bland". I mention this to a friend of mine, who
is a professional VB application developer. Together we construct a 6
month conversion project to convert the app from the BCC52 to a standard
VB app w/ a VC++ back-end for device and computational speed.

After six months, we complete the project, and its demoed at trade shows
around the country. Interest skyrockets. The phone rings off the hook.
There are lines at their booth.

Why?

Simple answer: eye candy.

VB apps have a snazzy appearence. The old "black box" which performed the
identical function did not.

The moral: packaging can make or break a product.

In this case, our "product" is amateur radio. However, amateur radio is
bland. It lacks "eye candy". Its technologically stagnant. Its not
"high tek". Maybe 'radio' was "high tek" in the public's mind in the
50's, 60's, and 70's, but it certainly isn't today. [Yes, I know

PCS and other services like Cell are "radio" and are "high tek", but
the public doesn't know that... they just think its a telephone, and
its what the public thinks that matters (sort of like the whole topic
of cell-phone privacy)].

So, why wasn't your friends interested in ham radio? Why would they be?
Computers, the Internet, Nintendo, Sega64 -- all are vastly more interesting
than amateur radio.

Now... Construct a way for kids to play Duke Nukem "Death Match"es over
amateur radio -- then they'll be interested!

Hans,

I disagree and I cabn point the flaw in your argument with a few names: Jack Babkes, W2GDG is one. The late Arthur M. Gentry, W6MEP another. The late Sam Harris W1FZJ yet another.

I was priveleged to know -- or at least meet all three. Each was an inventor; each was a ham; each invented to further ham radio and in the process managed to create new multi-megabuck industries; in Babkes case for himself and others; in Gentry's case only for others; in Harris case for the worlds society of radio-astronomers.

Now the government is finally beginning to admit that Cold Fusion might exist. One of the first two scientists to demonstrate its possibilities is a ham and he too is a researcher and inventor. There are many others.

Actually, it's the current that can kill you. Increased voltage causes increased current for the same resistance (Ohm's law) so higher voltages are more dangerous. The RF (radio waves) normally around you are not high enough voltage to cause any problems. Grab onto (or even stand next to) a high power broadcast station antenna and you may indeed be killed! As you move away from the source of the energy, it decreases to harmless levels. The same is true for radiation from the wiring in you house. It does radiate some energy, although a small amount. You generally have to actually touch a bare conductor to have any problems.

It is equally important to realize that there are two kinds of problems:
Those that are neant to be only worked on, and
Those that are meant to be solved.

God help you if you solve a problem that was only meant to be worked on!

6661. Callsign on Usenet - WHO CARES?

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-30 00:00:00 UTC
From: Curtis Wheeler <cwheeler@ccnet.com>
Message-ID: <33B85098.5127@ccnet.com>
Source record: 194664

James O'Brien wrote:

> How about a callsign Gottleib. If your going to keep the high and
> mighty comments coming then how about dumping a call in their boy.

Why are there people in this newsgroup that make an issue out of call signs? Call signs mean NOTHING...nada...zilch on the Usenet. If Gottleib gave his call in his post what difference would it make? What if he doesn't have one? So what?

If it's that important to you, look it up yourself. If he has a call, YOU can find it.

I have a '92 Explorer (with no alternator whine) and have installed an
ADI 2m rig (50watts) in it with a Larsen window-mount antenna. I plug
the rig into the cigarette lighter, which seems to work fine for me, but
I don't recommend it as a long term solution.

I haven't had any trouble with power windows opening due to RF, but once
the back windshield wiper was triggered when I keyed - still don't know
why...it was a one time only thing.

Hope this helps
73,
Dave VA3UE

If your Explorer has airbags, you should carefully consider where
you mount the radio so it doesn't get forced through someone's
body in an accident.

I first came across the "suggestions for ladies" thing about 18 months
ago on the bulletin board at work. The quoted source was a home
economics book from 1952, I believe.

The part I posted which included the "rules for men" is something
I wrote in response and hung on the bulletin board.

6680. Birthday Party on the air - Canada Day

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-30 00:00:00 UTC
From: hansbrakob@juno.COM
Message-ID: <19970629.224831.3158.1.HansBrakob@juno.com>
Source record: 194717

RAC CANADA DAY CONTEST

Each year on July 1, the anniversary of Canada's Confederation, Radio Amateurs of Canada (RAC) sponsors the Canada Day Contest. Amateurs all over the world are invited to Canada's Birthday Party on the air.

Contest Period: 0000 UTC to 2359 UTC July 1.

Bands and Modes: 160, 80, 40, 20, 15, 10, 6 and 2 metres, CW and phone (SSB, FM, AM, etc.) Suggested frequencies: CW - 25 kHz up from the band edge; SSB - 1850, 3775, 7075, 7225, 14175, 21250, 28500 kHz. Check for CW activity on the half-hour.

Exchange: Stations in Canada send RS(T) and province or territory. VEOs and stations outside Canada send RS(T) and a serial number.

QSOs: Contacts with stations in Canada or VEOs are worth 10 points. Contacts with stations outside Canada are worth 2 points. Contacts with RAC official stations are worth 20 points. RAC official stations are: VA2RAC, VA3RAC, VE1RAC, VE4RAC, VE5RAC, VE6RAC, VE7RAC, VE8RAC, VE9RAC, VO1RAC, VO2RAC, VY1RAC and VY2RAC.
You may work any station once on each of the two modes, on each of the eight contest bands. It is prohibited to make CW contacts in the conventional phone sub-bands, phone contacts in the conventional CW sub-bands, or to make or solicit contest QSOs through a repeater during the contest period.

Multipliers: Canada's 10 provinces and two territories, and may be counted once on each mode on each of the eight contest bands. The multipliers, with their postal abbreviations and prefixes are: Nova Scotia [NS] (VE1, CY9, CYO); Quebec [QC] (VE2, VA2); Ontario [ON] (VE3, VA3); Manitoba [MB] (VE4); Saskatchewan [SK] (VE5); Alberta [AB] (VE6); British Columbia [BC] (VE7); Northwest Territories [NT] (VE8); New Brunswick [NB] (VE9); Newfoundland and Labrador [NF] (VO1, VO2); Yukon [YU or YT] VY1; and Prince Edward Island [PE] (VY2).

Final Score: Total your QSO points from all bands, and multiply by the total multiplier points from all bands.

Categories:

* Single Operator All Bands;

* Single Operator Low Power (max. 100 W output);

* Single Operator QRP (max. 5 W output);

* Single Operator Single Band;

* Multi-operator.

Single operators who receive assistance from a DX spotting system or PacketCluster network during the contest must classify themselves as Multi-ops. There are no single-mode categories. Multi-operator stations may operate on several bands simultaneously.

Awards: Plaques will be awarded to the top-scoring entrants in each category. Thanks to the following for their sponsorship:

* Single Operator All Bands - Atlantic Ham Radio

* Single Operator Low Power - Durham Radio Sales and Service

* Single Operator Single Band - H.C. MacFarlane Electronics

* Multi-operator. - Norham Radio Inc.

The top-scoring foreign entrant will also win the Jorge Bozzo LU8DQ Memorial Plaque sponsored by Alan Goodacre, VE3HX/VE2AEJ. Certificates will be awarded to the
top-scoring entrant in each category in each province, territory, US call area, and DXCC country.

Results: Will be published in the November issue of The Canadian Amateur and will be sent to certificate winners.

Entries: Send entries to:

Radio Amateurs of Canada
720 Belfast Road, Suite 217
Ottawa Ontario Canada
K1G 0Z5
Canada

by July 31. Entries must contain a summary sheet showing score calculation, a dupe sheet listing calls worked on each mode on each band, a multiplier check sheet and log sheets. Logs sheets must show time, band, mode, call of station worked, exchanges sent and received and points claimed for each QSO. New multipliers must be clearly marked in the log.

Contest entry forms in Word, Wordperfect, or Word for Mac format, are available for download at the RAC ftp site

For information on other contests, please see the "Contest Calendar" in the current issue of The Canadian Amateur, or check out the excellent Amateur
Radio Contesting web page at http://www.contesting.com . Feel free to pose any questions you may have to TCA's contest columnist, Dave Goodwin at ve2zp@va3tcp.ampr.org.

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2YQH & The 59(9) DXReport, W3UR & Daily DX, N4ZY, W4NS, WA6YOO, K7DBV, NL7TB, KD8JN, DJ5AV & DX News Letter, DL2HEB, DL8OBC, F6AJA, G4BUE & DX News Sheet, JA1ELY, JA4DND, JH4RHF, LU6BEG, OH1NOA/OH0NOA, RA1QHJ, RA3AUU, VE6JO, VK4AAR and ZL3RG for the following DX information.

3RD ANNUAL RUSSIAN IOTA/DX CONVENTION will be hosted by the Russian Robinson Club in association with Russian Contest Club and Soyuz Radiolyubitelej Rossii (the Union of Radioamateurs of Russia) on August 29 to 31st, 1997, in Voronezh City, just 300 km south-east of Moscow. The announcement of details will be sent to all OPDX InterNet Subscribers as an additional bulletin.

3W, QUAN PHU QUOC ISLAND, (New IOTA - VIETNAM). By the time you read this, Hiroo, JA2EZD, should be active as 3W6ZD or 3W6PQ. Hiroo was to fly to Phu Quoc Island on the afternoon of June 29th with his TS-850S and tri-band yagi. He will operate all bands including the WARC bands. There is only one flight in a week, so Hiroo will stay and operate until 6 July.

5A, LIBYA. The "DX News Sheet" reports Charly, OE3KLU, and others from Icom-Austria Radio Club will be active from August 28th to September 7th, as 5A28. The group has applied for activity on 160-10 meters and also 6 and 2 meters.

FG, GUADELOUPE. Alain, F2HE, will be active as FG/F2HE now until September 25th. He activity will be mostly on CW. He has plans to try to activate some of the neighboring islands.

HF PROPAGATION QUESTIONS. Lee, KH6BZF, propagation guru who writes articles for several DX publications and magazines, informs OPDX that he is willing to receive questions from readers who send their questions to Lee's E-Mail address. He is willing to answer those questions direct or through his publications to inform all readers. Lee states, "If I

don't know the answer(s) I will do my best to find out and respond. Fair enough?"..... 73, Lee "KH6BZF REPORTS" at E-mail: leewical@aol.com

HL, ANMYU-DO ISLAND (South Korea). Operators HL1TUE, HL1TMU, HL1MKT and one other will activate this Korean Island (IOTA AS-080) as HL0N/3, from July 4-7th. Activity will be on CW/SSB on 40, 20 and 15 meters. QSL via HL1TUE. Via the bureau at: CPO BOX 162, SEOUL KOREA. Or direct to:
120-110
Eom,Sin-Jo (HL1TUE)
21st. Century Const. Research Lab.
Dept. of Architectural Eng.
YONSEI UNIVERSITY, 134 SHINCHON-DONG,
SEODAEMUN, SEOUL, KOREA

IOTA HUNTER'S NEWS.....
Matthias, DL4OCL, will travel to Poel Island (IOTA EU-098, DID O-002)
and join the RSGB IOTA Contest fun (July 26 to 27) as DL4OCL/p on CW and SSB. QSL to DL4OCL via bureau or direct to: Matthias Deutscher, P.O. Box 100412, D-30942 Ronnenberg, Germany.

Felix, DL8OBC, will again sign DL8OBC/p from Helgoland Island (IOTA EU-127, DID N-014). Activity can be expected beginning during the IOTA Contest weekend and will last approx. one week. QSL to DL8OBC via bureau or direct to: Felix J. Riess, P.O. Box 1253, D-30984 Gehrden, Germany.

1996 IOTA Contest winners OH1MDR, OH1NOA and OH1MM will once again activate Sandstrom Reef (EU-96) for the IOTA Contest. The group will probably use the call sign OH0MDR/1. Special attention will be given to the IOTA hunters in NA and JA. Their one target is to make even more than last year's 2700+ QSOs. QSL via OH1MDR.

Frank, YJ8AA, has had delays getting the boat overhauled, but should have it ready by the end of June for his departure soon for "The Shepherds Islands" (OC-111). QSL via VK4AAR direct only.

Alex, VE2AFC, will be active as VE2AFC/VE2 from Coudres Island (NA-128) sometime between July 15th and August 15th.

ES1RA/1, ES1QD/1 and ES1OX/1 will be active from Aegna Island (EU-149)
July 16-23rd. The group will then be active during the IOTA Contest as ES1QD/0 from Muhu Island (EU-034).

Ulli, DL2HEB, will use the OZ/DL2HEB/p callsign from Laes Island (EU-088). He will be active from July 14th to August 3rd. Operations
will be on 80-10 meters CW, but check the IOTA and QRP frequencies, especially 14.040 and 14.060. He does plan to take part in the IOTA Contest. QSL to DL2HEB via the bureau.

Hiromi, JA4DND, reports his plans to Oki Archipelago (AS041) were cancelled because of a big typhoon which hit this area. They will go to Oki the next chance they can in the next few months.

Evangelos G Papapanagiotu, reports that during the IOTA Contest the special callsign J48LSV will be active from Lesvos Island - Greece (EU-049). The operators (members of the Amateur Association of North Aegean) are expected to be SV8CRI, SV8DCY, SV8DTL, SV8DTD (maybe more). They will be active on all bands (80-10 meters) on SSB. QSL via Bureau or Direct (PO Box 46, Mytilene, GR-81100, Greece).
JX, JAN MAYEN. Begin looking for YL operator Unnui, LA6RHA, to be active from July 25th through August 1st as JX6RHA. She will be using the military amateur radio station. Operations are planned for SSB but with some CW on demand. Keep a close look on 14248 kHz. QSL to her home call.

NEWLY ELECTED OFFICERS. At the San Diego DX Club's June meeting, the membership elected the following slate of officers to serve for the 1997-1998 term: President- Bruce Clark, K6JYO; Vice President - Jim McCook,
W6YA; Secretary/Treasurer - Harry A. Hodges, WA6YOO; Directors - Bill Denton, NG6Z, Larry Serra, N6NC, Bob Pace, WB6NBU and Harvey Hiller, KD6QK. The membership also nominated Dick Shanks, W6BZE, founding President of the San Diego DX Club in 1946, to the position of President Emeritus. His election to this position was unanimous.

NP3, PUERTO RICO. Terry, W5XJ, will be active now until July 16 as NP3G. Activity will be mainly on 40 meters CW. Terry has plans to permanently move here by the end of summer. Also, look for Karen, N4YGP, to be active there as NP3F.

OA175, PERU (Special Prefix). Cesar, OA4QV, states he will be signing with the special prefix OA176 in commemoration of 176 years of Peru's independence. Activity will be from July 1-31st, with their Independence day taking place on July 28th. Operations will be on SSB on 40, 20, 15 and 10 meters. QSL direct with a SAE plus two International Replay Coupons (IRCs) to: Cesar Aguirre, P.O.Box 957, Lima 18 PERU.

QSL INFO AND NEWS.....
Jean, F6AJA, has received the HP1XBI logs up to May 13. All direct request are on the way. It's the same for all direct requests for HP1XBI/1 from Contadora Island from the end of March.

QSLs for UA3AP are now via his U.S. stateside callsign of K3AO either via the bureau or direct: Sergei Kulyov, P.O. Box 3497, Columbus, OH 43210, USA

Last week we mentioned N4BP would be active as ZF2DE/ZF8 and to QSL via N4BP (refer to OPDX.310). Since then, Jim, N4ZY, 4th Area QSL Manager Bureau for W/K/N (suffix B) states/advises OPDX readers that N4BP does not keep envelopes at the bureau and suggests not to send cards to the bureau (only direct). All the unclaimed cards over the past several years that have been addressed to N4BP had to be

destroyed. Jim reports this to save a lot of cards from going into the round file.

RUSSIAN ACTIVITY. The "Polar-97" DXpedition has began. RA1QQ, RW1ZZ, UA1ZIC, UA1ZJW and UA1ZKW have reported that they started their DXpeditions
to the islands of Barentsevo Sea. Look for them to be active from the following islands: Kildin Island (EU-82), Bolshoi Olenij Island (EU-61),
Lumbovskyi Island (EU-161) and Novaya Zemlya Island (EU-35). They were hoping to receive a special callsign (which did not happen) when they activate Bolshoi Ainov Island (a new IOTA, EU-???). Instead the team will
be signing homecall/1 and the team callsigns of UE1QQQ/1 and UE1ZNF/A. This DXpedition is dedicated to the 60th anniversary of renaming North Russian flotilla to Northern Navy (Severnyi Flot). QSL via UA1ZJW, P.O.Box 72, Severomorsk-1, 184600, Russia /or via RA1QQ, P.O.Box 24, Cherepovets, 162627, Russia.

SPECIAL EVENT. Look for VI0ANARE to be active from July 1st to October 31st to celebrate the 50th anniversary of the Australian National Antarctic
Research Expedition (A.N.A.R.E.). The suggested frequencies are:
SSB - 3620, 7075, 14175 and 21175 kHz
CW - 3532, 7020, 14052 and 21052 kHz
WARC bands by request and all frequencies are "+/-" QRM. QSL direct only to VK4AAR (Alan guarantees a fast reply, but no bureau facilities are
available for him). Bureau cards go to VK4ARB.

SPECIAL PREFIXES.....
The city of Calgary (AB, Canada) will host the World Police/Fire Games. Industry Canada assigned a special callsign prefix "CG6" for use by amateurs in Calgary area. This special prefix is valid now through July 4th.

Watch for amateurs in Thunder Bay, Ontario, using the CJ3 prefix instead of their VE3 prefix, and also the CK3 prefix instead of the VA3 prefix, during July 12-31st, in celebration of the Scouts Canada Jamboree.

USI ALERT. Randall, KD8JN, will activate Hatteras Island July 5-12th, as KD8JN/4 for the "United States Island Award" program. Hatteras Island as an USI number of NC-005S (also an IOTA of NA-067, Grid Square FM-25 and is located in Dare County). Activity will be on all bands. Suggested frequencies are: 3785, 7260, 14260, 18128, 21260, 24950 and 28460 kHz. QSL via the bureau or direct with a SASE to: Randall Phelps,
1226 Delverne Ave SW, Canton, Ohio 44710-1306 USA

USI ANNOUNCEMENT. The United States Islands Awards program (USI) will kick-off the summer with an operations from Northern Canada (Ops: KC7FVA, KC7KHU, and NL7TB). VY1USI will be active before and during the Canada

Day Contest from YT-002, 03, 04, and 05 and from a couple of "new ones" starting around 1700z on June 30th. The team will focus on the emerald green Yukon River in Whitehorse. VE7USI operation will commence from Atlin Lake (Northern BC) on July 2nd around 1700z from several "new ones" through July 4th. For a feeling of being there, try:
http://users.yknet.yk.ca/bbdo/cascade/about.htm
Photo QSLs will be available from NL7TB (SASE to: J Reisenauer, 23406 East Kennedy Rd., Benton City, WA 99320).

VK9L, LORD HOWE ISLAND. Jun/JH4RHF, Kumiko/JR4DUW (YL) and Hiro/JR4PMX are planning a trip to Lord Howe for their summer vacation during the IOTA Contest weekend. The operation itself will be from July 24-29th or so. The callsigns they hope to be assigned are; VK9RH, VK9YL and VK9MX, respectively (not licensed yet). Please note these callsigns are for VK9L-land. Activity will be 80-10 meters, SSB/CW. There will be some 160m and RTTY activity, if there are many requests. QSL via JH4RHF, for VK9RH and YL (or operation by these two). QSL via JR4PMX for VK9MX (or op by JR4PMX).

XW, LAOS. It has been reported that Zorro, JH1AJT, is in Laos with a group that will be active now until July 2nd. This is not Zorro's first time to Laos as he was there in December, 1989, as XW8KPV. Reports indicate
they will operate on as XW1A and on SSB as XW1 (YEP! That is the callsign).
The group will be operating on 6 through 160 meters. QSL via JH1AJT.

YJ, VANUATU (Activity on 6 meters!). Stuart, YJ8UU, will be active from Vila over the next 3 years. Look for him to begin activity around July 19th. Operations will be on all bands including 6 meters. His station consists of an Icom 706; antennas are a Gap R5 vertical and a 3 element Delta loop for 6 meters with 2 elements for 20 meters. He will be active daily at 0630z on 50.110 MHz. QSL via ZL2HE.

Z2, ZIMBABWE. "THE 59(9) DX REPORT" states Cedric, N9YXA, will be active on 160-10 meters, mainly SSB, from August 3-21st while providing communications for a church convoy. Callsign is yet to be announced.

ZF, CAYMAN ISLANDS. The Cinco Nueve Contest Group has announced early that they will operate as a Multi/Single from Little Cayman Island as ZF2RV during the CQWW CW Contest, November, 1997. Operators will be: Al, K7AR (ex-WB2TMP, op at YK0A); Lee, N7NU (ex-WB7SND, op at XR0Z); Mark, N7MQ (ZF2MC, and ex-N7MCA); Ron, WJ7R/ZF2RV; and Gene, K7DBV (ZF2BV).
ZF2RV contest QSLs are via AA6BB/7; cards for all other QSOs between November 24th and December 3th (including ZF2RV) go to each operator's home call, CBA or via W7 Bureau.

ZP, PARAGUAY. Ernesto (GADX Bulletin Editor), LU6BEG, will be operating from Asuncion as ZP5/LU6BEG from July 9-13th. Operations will be on 80-10 meters CW/RTTY/BLU. During the IARU Contest, he will team-up with Renato as a Multi-Op station using the callsign ZP5XF or ZP0M (to be

confirmed). QSL ZP5/LU6BEG to Box 1589 - 1000 CF - Argentina and
ZP5XF/ZP0M to Box 1937, Asuncion, Paraguay.

Mailloop is an Industrial Bulk Email and Newsgroup Broadcasting Program.

Visit http://205.199.4.219 for More info.

Here is just some of the many hunreds of Mailloops Features:

Send Bulk Email to Thousands of People an hour-

Send Bulk Broadcasts to the Newsgroups with an Anti-Cancel Bot Feature-

Send Binaries to the Newsgroups in Bulk-

Process your incoming Mailbox -

Build E-Mail and Newsgroup Lists From:

Extracting from the Newsgroups-

Extracting from a Whois-

By processing your incoming Mailbox-

By using the finger Client (You can finger a domain and extract all of the email addresses)-

Extracting From a Import File-

Extract from a Web Page-

Extract from an FTP Site-

And Many Many More.

If you interested in these and many other features that Mailloop has to offer, or to obtain a copy,

Visit Our Web Site:

It would appear that Mr. Burt doesn't administer tests. Since the rules say you gotta do one session a year Mr. Burt fell off the list. Note how many times he has been asked to provide the date of his last VE session and how he has ducked the question. He ain't gonna answer the question because the answer would reveal the real reason he lost his VE INACTIVITY.

KI7MH/TPK 1.83b Msg #:4030 Date:29-06-97 Time:5:27Z

No you wont get an explanation from the ARRL, you wont get them to confirm what you know to be the truth - that you were expelled for stating the ugly truth - for pointing out the ugly flaws in the system. Individuals like you with both the perception to see past the smoke screen and the intelligence and drive to point it out to the masses are a severe threat to the system. Over time your words begin to override the brainwashing of the system, and to confirm what all except the most dense already suspect... we must think how our leaders tell us to or face exile. To these "rulers", the biggest threat to thier brainwashing

is the truth - most people do have an intuitive understanding that what is presented to us is not the truth. When they hear it from you it begins to grow in thier minds like a young seedling. What the "rulers" must do is nip it in the bud while they can.

The fact that you were discredited by the ARRL leads me to believe they saw you as a threat. The fact that they offered no explanation other than "your voluntary services are no longer needed" (turning down FREE labor? - come on guys) simply confirms they are scared of you. You must be right, they must be wrong.

Where he came from, he is backed by millions of people, not one of them willing to step forward and be the second one shot down by the rest, the

remaining cowards unwilling to speak thier mind but rather repeat the pledge of the majority, whether or not it be true, in exchange for its protection.

KD4CDB has insulted my wife countless times.
We all know that she is not a poster here and that
his insults say far more about him, than her.
But in ADDITION it says a lot about YOU, you the ham
who does not put him in his place for the unprovoked comments.

I do not know if he has a wife or a male companion but I would never
say a word against that person because it would be wrong.

Attached is a picture of KC4CDB

It is in her(your daughter)best interest to differentiate between
Hams and Cops as she is a 'common-street-whore' and the Cops want to
arrest her and the Hams just want their dicks sucked!!!

From: J Whitinger <jwhitinger@worldnet.att.net>
Message-ID: <33B7CA18.786A@worldnet.att.net>
Source record: 194730

I am looking for someone that can provide me with COMPLETE information
on NWS messages.

Specificly I need to be able to decode the headers.. like this one:

WRUS1 KPIT 301420
FFWPIT
PAC085-301630-

I am in the process of writing a program for skywarn operators that will
monitor url's that provide the NWS messages, decode them and send out an
alpha-page to the user if there are any messages for the configured
area.

ANY assistance would be greatly appreciated.

Please e-mail: jwhitinger@worldnet.att.net

Thanks!

John Whitinger, N8WIP

WRONG!!!You must have a Novice,Tech-PLUS or higher to use 10
mtr(Legally).Unless of corse you are a Tech that up-graded from
Novice.IOW...you must have passed 5 wpm CW exam.

6699. Electrical Theory questions

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-30 00:00:00 UTC
From: madhu@cs.umd.edu
Message-ID: <5p8hmv$128@mimsy.cs.umd.edu>
Source record: 194736

I'm reading a chapter on Electrical Theory and was hoping someone could clear something up, specifically the difference b/w AC current and radio signals.

The chapter on Electrical theory says that 20 Hz and 20 Khz is the audio frequency range. so if you hook up your loudspeakers to say your outlet in your house, you can hear something b/c AC current in the US is transferred w/ a 60 Hz frequency. They say not to try this b/c you can get killed. (The voltage I suppose will kill you. My question is if that can kill you, why can't radio waves that are in the MHz that are floating around as I now type this letter kill me? Is it b/c there's no voltage? I'm not sure I understand the difference b/w the voltage and the frequency).

Also I'm curious to know if it's possible that the electric company could be transmitting, say, the top20 countdown when they're sending us electricity to our homes but of course, we couldn't hear it. Would that be possible?

Any answers to these longstanding questions would be appreciated.

thanks,

Madhu

6700. RE: Interesting Hams-Where?

To: BURT FISHER
Subj: INTERESTING HAMS-WHERE?

I wish you guys could come to Atlanta!! I am a 17 year old ham and have been licensed since 1985- and let me tell you how much I cannot agree more with you guys!! I have demonstrated amateur radio for SEVERAL of my

classes- never seen so many confused and bored people. I mean, let's get

real here- why would the average young person want to get into a hobby full of social oucasts when they can get into computers, drugs, booze,you name it!! I got into ham because I've got radio in my blood- but not everyone is like me!! And hey, we've got so many of those "barbie dolls" down here- just listening to all those old fart gutter scum talk about how their daughter passed her Tech is hilarious. I never

hear them on the air! No wonder I put up a GMRS repeater- people can actually understand the concept of that!!
73's from the armpit of the south,

6702. Field Day

Newsgroup: rec.radio.amateur.misc
Date: 1997-06-30 00:00:00 UTC
From: KB4AEP <crsdan@mis.net>
Message-ID: <33B7E86E.797C@mis.net>
Source record: 194739

(I wanted to post something different in this newsgroup, something other than squabbling, so I contribute my Amateur posting.)

It was 6 years since the last time I participated in Field Day, and that occasion was a bad experience. The transceiver's SSB crystal filter went bad on LSB, then the generator blew a head gasket. It was over as there was no commercial power at the site, and you can't rent a generator in the middle of the night.
This past weekend, I had the most realistic emergency drill ever. (Don't worry, nobody was hurt.) I beleive in the event of an actual emergency or disaster, people (even hams) would be caught off gaurd and just wing-it. To be totally prepared is unrealistic. Things just don't happen that way in real life.
The three of us (WR4F, KD4NSV, and myself) decided at last minute to operate field day. We didn't have a site secured, we didn't have a generator, we didn't have a bunch of antennas prepared and tuned.
I borrowed an 8 HP generator from my brother. He had it stored in his basement when back in the spring, here in KY., we had some serios flooding. The generator had been underwater for at least 2 hours.
We bought some fresh gas and oil, loaded up the HF and VHF gear and some stuff to make make-shift tables, grabbed some wire, coax, and connectors, and headed out to find a site.
We ended up at the local outdoor flea market, and we were told we could set-up in the parking lot. The grass hadn't been cut, so we were walking around in near knee-high grass and weeds.
After working over the flood damaged generator (several times through out the event) we went about setting up our gear. We used a time-tested Drake B-line which performed without a single glitch the whole event. (They are mine, and I was a proud Drake owner at the end of it).
We put quickly put together a random length dipole and strung it up about 15 ft. up in the trees. Using the Dentron antenna tuner, we got on the air as WR4F around 2:45 Eastern time.
We were already exhausted from the hurring and the hot, humid Kentucky weather. We operated 80, 40, and 20 meters on SSB and RTTY, and FM, Packet on 2 meters. Incidently, our 2 meter antenna was a 2 meter 5/8 wave mobile mag-mount stuck to a metal grate which we pulled out of the charcoal grill and pulled up into the trees on a string. As usual, there were small thunderstorms that popped-up and only stayed around long enough to be a nusance. We operated constantly until around 8 AM when everyone was to tired to continue. My head was busting with a sinus headache (we were in weeds), and my back was hurting from lugging that generator around.
We ended up with around 8000 points total, and 53 multipliers. (We used no amplifiers). The bands were pretty bad except 40, which was really

open to the western US. It was alot of work for a fair amount of fun. It was certainly a challenge, and we felt we were succesful inspite of tiring out and our low score. I'll do it again, but who knows what will happen to Amateur Radio before then, with all these anti-everything hateful people who seem to be taking over this excellent hobby.
